COMMODORE 64

VIC 20

LAS VEGAS

MINIPEDES

It is the height of summer and the garden is buzzing with bees and bugs. Minipede, a mutant mushroom monster advances relentlessly towards you, devouring everything in its path. 15 screens of fast and furious action make Minipedes a real challenge to the arcade enthusiasts.

Commodore 64 - VIC 20 16K

J.S. or K.B. £5.95

Experience the thrills of the gambling centre of the world from the comfort of your own armchair. Both versions include features such as spinning reels, hold, number-feature nudges, gamble/collect, spin score and hi-score. The Commodore 64 version has additional features, nudge, reward lucky 3, step-a-win and hi-score tables.

As with any arcade machine the odds are stacked against you!

Commodore 64 - VIC 20 16K

K.B. £5.95

TOM THUMB

Tom is trapped in a scrolling maze populated by loathsome creatures, guardians of the lost treasures of the Magezam. Six separate screens, five levels of difficulty and four player option provide an exciting challenge for the whole family. Another stunner from the author of **BONGO!**

(1 to 4 players)

a diamond can also claim his or her share of the Royalty Fund. **■** This grows with every copy sold up to a maximum of £1 million.

■ The Spirit of the Stones book is a great read.

■ The Spirit of the Stones software is great entertainment.

■ But they're much more than that.

■ They're an adventure.

■ A fascinating tale of mystery and imagination.

■ A voyage of discovery on the Isle of Wight.

■ A voyage of discovery

STONES HIDDEN ON THE ISLE OF WIGHT.

■ There are 41 of them.

■ 41 real diamonds hidden somewhere on the island, just waiting to be discovered.

■ 40 diamonds set in stoneware talismans. And the great Wight Eye itself, the most fabulous diamond of them all.

■ Only **commodore** diamonds can one man **COMPUTER SOFTWARE** know where they are hidden, and he's not saying.

■ All that he has to say he's said already. In the Spirit of the Stones.

■ It's a book and a computer game.

■ And together they reveal the whereabouts of all those diamonds.

■ But – and here's the catch...in the form of riddles and clues.

■ Solve the puzzles in the program and you'll find it easier to solve the puzzles in the book.

■ Solve the puzzles in the book and one (or more) diamonds can be yours.

■ Forever. And ever.

■ You don't even have to go to the Isle of Wight. (Though should you want to, we've put a bargain holiday offer in every pack).

■ You simply work out where the diamonds are, and post off your claim.

■ Whoever discovers

into an unknown world of poltergeists, unholy spirits, banshees, manticóres and demons.

■ The Spirit of the Stones is as entertaining as it can be rewarding. And, like all of our software, it has been specifically designed to get the best out of Commodore hardware.

■ You can't choose better.

■ Commodore software: it costs no more, even though there's more to it.

■ SPIRIT OF THE STONES DISK OR CASSETTE WITH BOOK £14.99.

DISTRIBUTORS: Microdealer, Tiger Distribution and Centre Soft

At the start/finish line you strap on your helmet, check your instruments, gun your engine and surge onto the course. Through the corners, up the hills, into the ruts and down the straightly you manoeuvre for position and try to beat the clock. Stay ahead if you can. But whatever you do, stay on course.

If you don't, one of two things will happen. You'll slow down and lose valuable seconds getting back into the race. Or worse, you'll end up on the seat of your pants. Who says computers won't like to get dirty?

Your agents risked their lives to find the enemy's secret headquarters. Now you're risking yours to destroy it. And they know you're coming. Time is short, so you'll have to fly. But fly too fast, and you'll squander your precious fuel supply. Needless to say, they don't issue parachutes on missions like this. As you soar over hundreds of miles of distinctly unfriendly territory, the action is thick, fast and frighteningly three-dimensional. Fighter aircraft, surface-to-air missiles, Helicopter gunships. The attacks come from every direction. Even from behind.

Edison, the kinetic android, leads a frustrating life. All he really wants to do is build his circuit boards and go with the flow. But things keep going in the way. Nohms — a negative influence — bug him regularly. They're annoying, but only from a distance. Flash, the lightning ball, disconnects everything in his path. Which can be frustrating after a hard day on the circuit. And the cunning Millerwait is out to try poor Edison's brains. But our hero simply solders on. Juice! is the ultimate circuit event. You'll get a charge out of it. And a few jolts, too!

HOW TO ORDER

To purchase any of the above games, simply fill in your name and address on a piece of paper, enclosing your cheque made payable to: SYSTEM 3 SOFTWARE and post to the address below. Please allow 7 to 14 days for delivery. Overseas Orders. Add £1.00 per game ordered.

COMMODORE 64

Contents

News

We're first with the latest news from the world of the Commodore

The Happy Hacker

We begin a regular series by the hacker's hack, Robert Schifreen, that'll keep you in touch with Compunet and Micronet.

Business User

In this month's business section, Karl Dallas investigates an application for the 64 in your chemist, and brings us some up-to-date news.

Victuals

Among this month's batch of programs is our first ever for the Commodore 16. There's also an epidemic on the 64 and some useful routines.

Operation Salvage

A corrupted or NEWed program can be bad for the blood pressure — Frank Randall tells you how to recover your cool.

Plugging into Epson

Chris Durham reviews the Comprint interface which makes an Epson printer compatible with your 64.

Beginners Basic

The first of a four-part series by Brian Grainger designed to lead you gently into the world of Basic programming.

The Forth Dimension

This month Richard Hunt gets to grips with the knotty problems of string handling and keyboard input.

Competition

Answer three ridiculously simple questions and win Activision's Designer's Pencil.

From Paintpots to Pixels

The graphics capabilities of the 64 are impressive, but to get the best of them you'll need to use some graphics software. We help you sort through the possibilities.

Man at the Top

Bohdan Buciak went to Corby to find out from Commodore's general manager, Howard Stanworth, how the company was doing and what he had in mind for the future.

Making the Grade

If you break out into a cold sweat at the thought of the dreaded 'O' Level exams, help is at hand with some revision programs. Colleen Young adjudicates.

Tommy's Tips

Tommy emerges once again with more answers to those everyday problems . . .

News

Commodore Beasties

Robotics fans will be pleased to read that an infra red version of the Beasty control unit (previously available only for the BBC micro) is now available for the Commodore 64. It will allow you to control the Beasty Robotic Arm.

The device is an eight channel interface which its distributors, Commotion, claim to be fully compatible with both the Beasty arm and its mobile base. It can control that, or up to eight

servo motors within a minimum range of six metres.

Commotion hasn't fixed prices for the infra red Beasty yet, but say it will be under £50. It also supplies servo motors from Futaba at £14.50 each for the standard model. The Beasty arm itself comes in two forms: £110 for a ready-assembled package with three servos, or £39.95 for the DIY kit. More details from Commotion on 01-804 1378.

SHORTS

All credit to Smiths: W H Smith has announced that it's going to make it easier for you to splash out on computers, peripherals and software. Its computer shops and departments are now offering credit on purchases between £400 and £2,000, ten percent of which is taken as an initial deposit. You pay back in monthly installments over one, two or three years. Maybe now you'll be able to buy that disk drive, and printer, and monitor and . . .

SHORTS

Breakaway: yet another episode in the great software

house musical-chairs game. Mark Meakings, co-founder of Bubble Bus has left to set up a new company, Lionheart. Apparently, Meakings decided it was time to break away and start afresh. And what are Lionheart's aims? To produce "innovative" and "high quality" software. But that may depend on you — Lionheart is looking for talented freelance programmers.

SHORTS

Radio news: amateur radio buffs will be pleased to hear that Moray Micro Computing has announced a QTH Locator program for the 64 (£6.50 on tape, £8.50 on disk). The program calculates the distance between QTH Locator squares, a new QTH Locator square between two points whose longitude and latitude is specified, and calculates the new six-digit QTH Locator square from the previous five-digit QRA locator. What's a QTH Locator? Better ask a Radio Ham. Moray is on 05427 384.

Fact-packed software

Piper Software, a subsidiary of Pan Books, has introduced a range of software for the Commodore 64 that "brings information to life as never before", according to the blurb. The subjects being given this enlivening treatment are birds, aeroplanes, dinosaurs and astronomy.

There's a Software Activity Pack for each of these subjects, designed for children aged eight or over, which includes a cassette containing four educational

games, and an accompanying 96-page fact book on the particular subject (after all, Pan are book publishers). Each package in the range costs a mere £7.95.

For those of you interested in aeroplanes, the Aircraft program gives you four games: a flight simulator (you get an unusual sideways view of the plane), a program to test your skills at taxiing, an enemy fighter identification program and a shoot 'em up game (you

estimate range, height and bearing).

As well as the accompanying book, the Astronomy package has five games on its cassette: pilot your spaceship to discover hidden planets, answer questions to progress from Trainee to Ace Astronaut, build a databank to hold your planet information. More interestingly, there's a program to introduce you to the Constellations and a Zodiac Star Map that shows you how the constellations

link together.

The Birds package also gives you five games, ranging from steering a winter migrating bird back to sunny Britain, to building a database in which to collect your bird facts. Finally, there's Dinosaurs, which follows roughly the same type of format, though one of the games sets out to let you control the evolutionary process — amazing what you can do with a 64.

ONLY
£34.95
 (p&p £2.50)

**THE ROTRONICS
 DR2301 COMPUTER/
 AUDIO CASSETTE
 RECORDER**

The Rotronics DR2301 has all the facilities you would expect of a quality audio recorder and also works perfectly with the VIC 20 and CBM 64 computers without any fiddly separate boxes or adaptors. Simply connect the DR2301 directly with your Commodore computer via

the lead supplied and you are ready to start. The built-in interface circuitry ensures that SAVEing and LOADING is completely reliable—even when using commercially produced software. The DR2301 also allows the

computer to sense when the PLAY key has been depressed. Additional features are auto-stop, tape counter, in-built microphone and foldaway carrying handle. The DR2301 is also compatible with the ZX81, Spectrum

and many other popular home computers. The DR2301 will take its power from the computer (Commodore only), mains adaptor (supplied) or internal batteries. Each unit carries a full 12 month guarantee.

Superb accessories for Commodore from Rotronics

**THE ROTRONICS
 PORTABLE CASE**

Here is the ideal portable work station for home, school or work. Specially made for most home microcomputers, it contains your VIC 20 or CBM 64 within a smart executive style case with removable lid for convenience in use.

The individually tailored foam insert securely protects your micro and cassette recorder (C2N or DR2301) during transit. Additional storage space in the lid holds manuals and up to twenty cassettes. A scalpel is provided to modify the insert for expansion units and an alternative

insert can be supplied if you change your hardware in the future. The case is also available with uncut foam inserts.

All components remain fully operational within the case via inter-connections routed between the double layers of foam, so there are no unsightly leads.

The case has been designed for easy use with each component positioned for convenient operation. The overall dimensions are 138mm x 725mm x 363mm. **ONLY £34.49 (p+p £2.50)**

FIRST AID

for your 64

Computers, like people, are fallible. They need the right combination of code and care to perform effectively in the business or the home. And that requires first hand knowledge from you to create a healthy operating environment for your Commodore 64.

Knowledge about machine language, about the lesser known qualities of the 64, about the disc drives, graphics, and about the tricks and tips to keep your 64 on line. That's why First Publishing has now launched in the UK a series of high quality books and software packages to provide a complete health care kit for your 64. Commodore 64 users throughout Europe have already found it a tonic. We think you will, too.

For a brochure on all the Commodore 64 books and software packages available from First Publishing, please fill in the coupon and send to: Amanda York, First Publishing, Unit 20B, Horseshoe Road, Horseshoe Park, Pangbourne, Berkshire.

FIRST PUBLISHING LTD

Welcome to the pleasuregame

Is there no end to Frankiemania? Not content with cornering the record, t-shirt and video market the band are preparing an assault on the software world.

Ocean Software have joined forces with Island Records and ZTT, the group's label, to produce an advanced computer game featuring the naughty scallies. It will run on both the Spectrum and the Commodore 64, with the three companies receiving the revenue and the band receiving royalties.

It's described as a "spectacular" in the blurb and it will follow an adventure format involving the group in various situations, though, we're assured, "it won't be dirty". Shame. The story has yet to be written but it seems that Paul Morley, ZTT impresario, will be responsible for much of the creative input. Laughter.

Games which link up with pop groups haven't all been entirely successful. A

Shakin' Stevens single with a program on the back didn't sell very well (that of course couldn't have had anything to do with the quality of the single, though). Also, The Thompson Twins' management pulled the plug on a computer game involving the band.

These setbacks don't bother David Ward, director of Ocean. "Frankie are simply a hook to hang the game on. The game has to be good — often titles linked with stars won't sell because they rely on the name.

"The Frankie game will work because it can be played on different levels, like the various meanings in a book. There is a concept behind the band that makes them very interesting. They are life imitating art."

Sounds to us as if he's fallen for the ZTT hype, either that or he's been reading Paul Morley's old *NME* articles. We'll have to wait for the result of all this philosophy until the spring, when it will sell for £9.95.

Holly Johnson: art imitates life imitates software game

Real music keyboard

There are plenty of software packages available to exploit the music making potential of your Commodore 64, but most of them use the 64's keyboard as a music keyboard — and that's a bore for budding Stevie Wonders. Now, LVL, a Nottingham-based company has produced the Echo 1 keyboard complete with Organ Master software (on cassette or disk), that plugs

straight into the 64. It costs £99.95.

The three-octave keyboard is sturdily built with full-size keys. It plugs into the 64's user port via a ribbon cable and adaptor socket, and needs no external power supply. Its accompanying software comprises two modes: organ and synthesiser.

When run, the program is in organ mode. Your screen

shows roughly half of the 64's keyboard and the tone and effects tabs associated with each computer key. In this mode, any note played on the Echo 1 is immediately sounded. Two keys also let you select one-finger major and minor chords. There's provision for tremolo, vibrato and for lifting or lowering pitch to tune the organ to other instruments.

In synthesiser mode the

SHORTS

Adventure on disk: Level 9 has announced that all six of its adventures for the Commodore 64 are now available on disk, at £9.95 each. For those of you who've already bought cassettes, the company will exchange them. Just send the cassette to Level 9 with £2.50 to cover cost, and a disk should wing its way to you. Oh, and you can get one of the company's A3 colour posters by sending them a stamped-addressed envelope. Level 9's address is: 229 Hughenden Road, High Wycombe, Bucks HP13 5PG.

screen display changes to give details of SID chip parameters like the ADSR envelope. Pressing the F1 key allows progression through triangles, synchro, ring modulation, sawtooth, pulse and noise. Sounds pretty good, and we're looking to review it in the next issue. Meanwhile, more details on 0602 394000.

*Another winner in the range
of Sensational Software....*

AIR TRAFFIC CONTROL

This is not just a game but a simulation of everyday problems encountered by those real-life air traffic controllers. All air travellers are unconsciously dependant on the skill of these people and this program enables you to test your skills in manoeuvring aircraft safely around the air motorways and despatching them into the hands of others in neighbouring air space.

MIKRO-GEN

Home Computer Weekly

It is fascinating to watch, and interesting to play.

Even on level one your interest is held. Level nine is so crowded that not even a real controller could cope.

As absorbing as a flight simulator, but different!

Choosing a printer is a lot easier than choosing a computer.

THERE are dozens of quality printers from which to choose. With quality price tags of around £250.

The Brother M-1009, however, breaks all the rules.

Stays defiantly below the £200 barrier.

Though it has far more than its fair share of features, it maintains the extraordinarily low price of £199.95.

Travels at a steady fifty.

In the speed stakes, the M-1009 is certainly no slouch, being fully capable of up to 50 characters per second.

Providing bi-directional and logic seeking printing for normal characters and uni-directional printing for super and sub script and graphics.

Prints on any paper.

Being an impact printer, the M-1009 will print on virtually any paper, including letter headings, invoices and standard office stationery.

It will even print two copies together with your original.

A superb character recommendation.

In its price range, the M-1009 has a great deal more character than many printers.

96 no less, plus international type and graphic characters.

Reliability comes as standard.

Built to the same exacting standards as Brother's elite office

printers, the Brother M-1009 already has faultless credentials for reliability.

Its 9-pin dot matrix head, for example, has an astonishing 20 million character service life.

One printer that doesn't block out the light.

Many home computers tend to be a little on the large side.

In contrast, the compact M-1009, at only 7 cm high, keeps a discreet profile.

Well designed, reliable – and conscientious.

The Brother M-1009.

The future at your fingertips.

SYSTEM SNIPPETS

Good news for Compuneteers fed up with the speed of the system. Compunet are working on some time-saving enhancements and, I'm assured, the system will be working up to three times faster in the near future.

Scrolling software for use with the Compunet modem will soon be available. If you've used Prestel you'll know that, after displaying a page, the screen clears and the next one starts from the top of the screen again.

Scrolling means that any text simply moves up the screen, just like a piece of paper in a typewriter.

The software is already complete and, when the documentation is finished, you'll be able to download it just like Viewdata and Terminal — the programs which allow you to access Prestel.

With this extra scrolling facility, you can use a Compunet modem as a terminal to other mainframes, and can log in to PSS. This is BT's data network, with access to many other computers. Details from your local BT sales office. Be warned, though, if my experience is anything to go by, they probably won't know what you're talking about.

MUD SLINGING

A trigger product, in the case of a network, is a facility which, on its own, is grounds enough to make you subscribe. **Homelink**, for example, is a homebanking service. The average Homelink subscriber joins Prestel simply because Homelink is not available anywhere else.

MUD, a cult game among many micro owners, is set to be Compunet's trigger product. It's an adventure game, running in real time, which can support around twenty users at once. Each person logs in via a micro and a modem.

The rights to MUD were recently sold by its author Richard Bartle to Century Communications and the game has been made available on Compunet.

The present version is written for a DEC10 minicomputer, and a link is provided between Compunet and the DEC machine.

The only problem for the average user must be the cost. At £5 a month plus £3 per hour, playing MUD on Compunet isn't a cheap way of having fun.

If you're thinking of joining Compunet mainly to play the game, you might do better to think of joining PSS. You pay £25 initially, then £6.25 per quarter. Armed with your PSS identity number, you can gain cheap access to Essex University, where MUD is currently running for free.

by Robert Schifreen

With Compunet and Micronet now accessible to the Commodore 64, we bring you a new regular column. Each month, The Happy Hacker looks at what's new in Compunet, Micronet and communications networks in general.

Got something to tell us? Why not drop us a line to: *Commodore User*, Priory Court, 30-32 Farringdon Lane, London EC1 3AU — or on Prestel page number *6001880.

Ironically, there's also a version running on a DEC10 in Oslo, Norway. No one knows how they managed to get hold of a copy of the program, but, through PSS, you can actually play MUD in Oslo. And it can still be cheaper than going through Compunet!

COMMODORE MICROBASE

The Commodore area on Micronet starts on page 800200, and caters exclusively for the 64. The database was opened to coincide with the launch of

the 64 modem — too soon according to some people. The main areas at the time of writing are:

- *features* (page 800203):- articles about using the 64. A good introduction to using the SID sound chip. Also, a rather sarcastic look at Simons' Basic.

- *hardware* (800205):- looks at Commodore-compatible peripherals. There's one section for equipment that has been tested and reviewed by Micronet, and one for any that hasn't.

- *ICPUG* (800201):- the Independent Commodore Products User Group has its own pages on Micronet. If you can't find what you want here, try Clubspot on page 810.

- *telesoftware* (600617):- for the 64 is rather scarce at the moment. There are a few games for downloading, including a range from Supersoft and Ocean. Although cheaper than in the shops, they're rather outdated.

Micromouse is rapidly becoming one of the most widely read areas of Micronet. Run by a database addict, many of his news stories come straight from the American networks and make an interesting read. A good place to find out what else you can do with a micro and a phone apart from using Compunet and Prestel. Most of it's legal, though some stories should carry a BT health warning!

Compunet has retaliated with CompuCat, which is set to develop a similar following.

HOW SAFE IS SAFE?

You can't have missed recent TV and newspaper reports of various lapses in Prestel security. Someone even managed to find the ID number and password of the system manager, which gave access to any area on the database and any user's password.

Last month, Timefame International, one of the most widely read information providers on Prestel, claimed that its ID was 'hacked' just hours after the ID was changed. Why was it changed, you ask? Because of the hack the week before!

Prestel claimed that they had evidence which proved that this second break-in did not occur, and asked Timefame to withdraw their comments. They refused, and Prestel "terminated its agreement" with Timefame and removed their facility to use Prestel. At the time of writing, the Timefame database does not exist. If it does not reappear, many people will start asking whether Prestel did actually have something to hide.

If you use any system, change your passwords at least once every two weeks. In the case of Compunet, make sure that no one ever sees you entering your password or user ID.

that's on Micronet and Compunet

 software

The perfect first program

The DIARY 64 program lets you
 start at once because it's so
 simple. The program is on
 cartridge – so it is quick and
 easy to load. Data can be
 stored on cassette or disk.

Keeping track of phone num-
 bers, appointments, birthdays
 and schedules has always been
 a problem – now you can let
 DIARY 64 help you remember.
 The CBM 64 becomes your
 time-manager, you can print
 address labels – for Christmas
 cards etc. DIARY works like a
 big notebook with its pages
 appearing on screen. Using the
 search function you can let the
 CBM 64 find that address or
 appointment that you need.

 HANDIC SOFTWARE.

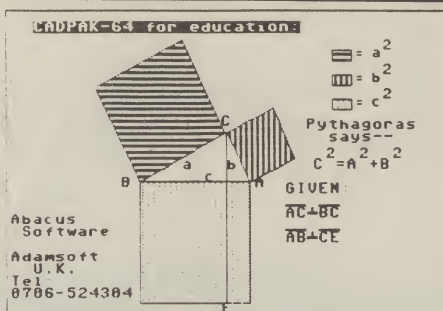

A SUPERB DESIGN TOOL

CADPACK-64 is a superb tool for computer-aided designs and drawings. Graphics Drawings are done directly onto the high resolution screen using a light pen.

CADPACK-64 can create and edit graphics pictures, drawings, layouts, and renderings - quickly, accurately and artistically. The output is suitable for reproduction as hardcopy printout or photographs.

CADPACK-64 is a snap to use! The main menu lets you choose from a full list of options simply by selecting one with the light pen. Your interaction with the keyboard is minimal.

CADPACK-64 gives you two full high resolution screens. You can draw with any combination of LINES, BOXES, CIRCLES and ELLIPSES; FILL using patterns or solid colours; free hand DRAW; COPY sections of the screen to other sections of the screen. You can choose point placement down to the pixel level by using the floating vernier. The ZOOM feature lets you do detailed design within a small section of the screen.

CADPACK-64 runs on a Commodore 64 with 1541 disk drive and requires a high quality light pen. A printer is optional.

CADPACK-64 makes design work with a Commodore 64 so very easy. We challenge you to try one of the most useful design tools available at any price for a home computer.

CADPACK-64 w/comprehensive manual on DISK £35.00

CADPAK-64 is now available complete with lightpen at £49.95

CADPACK-64 has a powerful OBJECT EDITOR which lets you define the shape of OBJECTS such as furniture, electronic circuitry or machinery. These definitions can be as intricate as the resolution of the screen permits. You can name these OBJECTS, build a library of them on disk, and then recall and display them on the screen at varying SCALEs or ROTATIONS. When your designs are complete, you can SAVE/RECALL finished screens to/from the disk. Finally you can reproduce the results to one of popular dot matrix printers: Commodore 1525E, MPS-801, Epson MX, RX or FX series, Okidata C, Itoh Prowriter, Star Gemini.

Adventure INTO THE VALLEY

with John Ransley

John Ransley has ignored (temporarily of course) the sackful of latest and greatest adventures we've hurled at him this month. Why? Because he's going about writing his own brain-twister, confident that, with the right tools, anyone can do (almost) as well as the near-mythical professionals. But how do you think up the ideas and plan them, how do you write the program, design the graphics, speed up the action and smooth out the rough edges? Read on . . .

If you spent a goodly chunk of the Christmas and New Year break exploring one or two new adventures you've borrowed or bought, the chances are that you'll have been just a little disappointed with some aspects of at least one of them. And it's equally likely that you'll have said to yourself, 'I can do better than that'.

Sure you can. Yet you probably imagine that, whether you're attracted by the idea of creating a text, graphic or animated adventure, there are two big obstacles in the way of you ever coming close to the success of Scott Adams, Pete Austin or Philip Mitchell; that you lack their creativity and originality, and that you could never mimic their programming skills. Well, balrogs to all that.

Get the idea . . .

First, remember that all three of those luminaries have openly borrowed from the ideas of popular authors — Mitchell from Conan Doyle and Tolkein; Adams from Robert Louis Stevenson and Bram Stoker; and Pete Austin from H G Wells. No reason why you shouldn't do the same. In the software swamp, where naff adventures lurk like pantomime crocodiles to good-naturedly swallow your wallet, it's not surprising that people respond more readily

to the familiar. In general, you don't risk infringing copyright in the case of the original works of any author whose death occurred more than 50 years ago.

There are exceptions (such as in the case of contemporary editions of foreign-language works, where fresh copyright will be vested in the translator), but the software house interested in acquiring your game will check out this situation anyway. Besides, there's still no reason why you can't base an adventure or any other game on a contemporary work (*viz Ghostbusters, Erik the Viking, Danger Mouse*) provided you accept that the copyright holder must be paid a percentage of the sales. But as a 'name' will help to move more copies off the shelf anyway, your overall income is unlikely to be diminished — probably the opposite.

A stroll round your local library, bookshops and secondhand book dealers will provide you with more than enough inspiration for your own adventure. There are literary treasures all over the place just waiting to be discovered; hitting on John Masefield's forgotten children's classic *The Box of Delights* must have been the answer to a prayer by a TV producer looking for a serial to please youngsters raised on Dr Who, E.T. and Dungeons

and Dragons.

There still remains the task of programming your adventure and then presenting it in a form that's professionally acceptable. Here, you can count yourself lucky. Crowther and Woods and the other pioneers of adventure authorship had to start from scratch — but with just one or two well-considered purchases, you can learn and apply everything they've ever known.

Learning from books

I'm assuming that you have a pretty good grasp of Commodore Basic and aren't looking for books which teach the absolute fundamentals of topics such as string handling. But you will want to learn the ABCs of how to create an adventure and plan that all-important map on paper and then translate that into an attractive (and hopefully even marketable) program.

Then as you've passed the beginner stage, you'll want an insight into the more sophisticated techniques for achieving full-sentence input, independent action, graphics and animated interludes, and so on.

To get you on the right road, you can choose from Keith Campbell's *Book of Adventure* (Melbourne House, 138pp, £5.95), Write

Your Own Adventure Programs (Usborne, 48pp, £1.99) and **Commodore 64 Adventures** by Mike Grace (Sunshine Books, 214pp, £5.95).

A friendly and chatty approach to the task is taken by Keith Campbell — and I'd better be careful what I say because not only is he the doyen of British adventure columnists (he's been writing our sister mag, *Computer & Video Games*, since the days when Babbage was the tea boy there). He's also about nine feet tall.

If you admit to even less confidence about tackling adventure authorship than I did at first, then Keith's book is definitely the one for you. It unravels the mysteries of the conventional adventure programming in bite-sized chunks and puts them to work in a compact mystery (there's a full listing for the 64) that

nevertheless incorporates all the techniques explained in the earlier chapters. Not being machine-specific, the book inevitably falls down in some respects (it lacks, for example, anything like Mike Grace's routines to SAVE an adventure at any point), but otherwise there's little to fault it.

In Mike Grace's effort, all the tricks the beginner needs are very clearly explained with the help of sample modules which quickly build into a simple demo adventure. This is the springboard for a much more ambitious program which, again, is presented in modules that are amply explained along the way.

I have to admit to a certain bias in favour of this particular title because it was the one that nursed me through my first steps in adventure writing, and I've not found anything since that surpasses it in terms of clarity. Mike Grace's enthusiasm for his subject is infectious (so often, computer books read as though their authors are bored stiff by it all); his cheerful tuition really makes you want to start tapping away at the keyboard straight away.

And more books . . .

I'm a great fan of Usborne's colourful and heavily-illustrated books and have already bought a number of their computer guides, even though I suppose they're meant for a younger readership. Don't care who's watching — I like the pictures. **Write Your Own Adventure Programs** by Jenny Tyler and Les Howarth could sell at twice the price and still be great value. Usborne's graphic house style is put to excellent use in conveying concepts such as object arrays in a visually appealing way; the map and grids for the demo adventure, for example, are little masterpieces. The main listing is in a universal Basic, with special machine-specific lines where necessary. These even include the sound effects; and any book that can confidently present, as this one does, SFX for a ghost falling out of a tree — and on a Vic 20 at that — just has to merit shelf space. Incidentally, certain POKES apart, you'd be able to implement all the Vic/64-specific routines and programs in these three books on the C16

and Plus/4 with only minor changes.

Other titles you should take a look at before making your final choice are **Creating Adventure Programs On Your Computer** by Andrew Nelson (Interface, £4.95) and Peter Gerrard's **Exploring Adventures on the Commodore 64** (Duckworth, 328pp, £6.95).

Battling with Basic

So now you've worked out your storyline and map (perhaps with the help of Print 'n' Plotter's useful **Adventure Planner**, (£4.50), and it's time to labour at the keyboard. And as we all know, Basic 2.0 makes it more of a labour than it need be. Fortunately, there are no end of machine utilities which will help you overcome the most disagreeable aspects of Commodore Basic, which I've always suspected was written by an Esperanto tutor with a hangover.

The facilities offered vary enormously — from simple disk-handling and input validation on Commodore's own **Programmer's Utilities** (£14.99, disk only) to the excellent **BC Basic** cartridge bursting with nearly 100 extensions to make life really easy (Kuma, £57.50). Others worth evaluating include **The Tool** (Audiogenic, £14.95), **Help** (Stack, £25), **Gas Kit 64** (Anirog, £14.95), **Video Basic 64** (Adamssoft, £42), **Basic Plus** (J Morrison Micros, £7.95) and **Power 64** (Kobra, £75).

Many of these include simple commands for generating very sophisticated and hi-res screens of the kind that make Twin Kingdom Valley or Eureka! so watchable. Alternatively, you can buy programs which are for the sole purpose of transforming those 64,000 pixels into something like Dali might have painted for De Mille.

Getting the graphics right

Be very careful what you buy in the case of graphics utilities. Some will only allow the designs they've been used to create to be screened if the utility itself is in memory. What you're looking for, of course, are programs which help you to create nice pictures which can then be incorporated in your own Basic programs. So far, I've discovered and tested three

which meet this criterion.

The cheapest is (don't laugh) **Tony Hart's Art Master** (Commodore, £9.99/£11.99 disk) which comes together with four demo pictures to see what can be done. The program was actually written by David Byrden but I have enough regard for Mr Hart to believe that he wouldn't lend his name to anything tacky — and he hasn't. What you get is

a full-feature package that isn't particularly user-friendly but which will soon have you knocking out video art that would have taken you ages to produce otherwise. The instruction leaflet is average to excellent, and includes a simple routine for using the pictures — even as a games background for animated sprites — in your own programs. Jolly good.

Also available on tape is **Panorama (H)** by Andrew Colin (Talent Computer Systems, £17.95/£19.95 disk). With a 36-page instruction booklet packed with words and diagrams, it all seems rather daunting at first — but after a few hours of working through the examples and experimenting for yourself, you should begin to get some real value out of this very professional product. It has every feature you could possibly want and a few you've probably never thought of.

I'd be hard-pressed to choose between this and **Doodle!** (Quicksilver, £14.95 disk only) which is a little less sophisticated in some respects but offers much in other ways. For a start, it gets so friendly, it'll start the neighbours gossiping. For example, when you're working on a picture you can instantly toggle between all the menu and instruction pages to make sure you're going to hit the right button next. You can tuck a duplicate design away in memory so that if you spoil a picture with your next embellishment, you can call back the earlier version straight away.

Graphics with tablets

With these three, you guide the cursor around the screen with the keys or joystick. Two other products which permit the generation of 'stand alone' pictures, but which I've not tried, use a stylus — which makes it much easier to copy from an original by simply 'tracing' over it. One is the pricey but, from all reports, virtually faultless **Koala Pad** (Audiogenic, £79.95), which now has the benefit of improved 64 software. The other is the marginally more affordable **Super Sketch** (Stonechip Electronics, £59.95), which appears to offer the advantage of a drawing board significantly larger than Koala's dinky 4 in. square pad.

One thing to remember above all is that all five of these products offer the facility of storing usually not more than one complete screen in memory at a time. So for tape adventures, their use is really limited to the creation of a knockout title screen for a text adventure. But if you're thinking in terms of disk, then of course you can cut the tracks with quite a number of pictures (though remember that they'll each occupy anything from 8K to double that), and call them up as needed.

Compile and run

Come the dawn, and eventually you find that you've written your very first adventure. Trouble is, not only do all those IF...THENs and ON...GOTOs slow input responses to the speed of the average British Rail buffet car attendant, but all those florid text screens and natty graphics have left you just short of enough memory to hold the dynamic variables. Well, you should have written it in machine code, shouldn't you? Except that by the time you've done that, it'll be your successors who get your royalties and not you.

So buy a compiler and you'll find yourself in a new world. They're ridiculously easy to use and the results are invariably astounding. Just load the compiler into your 64, touch a couple of keys, load your original Basic program, and then wait for the compiler to do the rest. After a few minutes, you'll have a compiled version which you can SAVE

MAKE THE MOST OF YOUR COMPUTER.

Adventure

separately and which you or anyone else can RUN without the compiler itself in memory.

I've been using the disk version of **DTL-64 Jetpack** (Dataview-Wordcraft, £39.95) for some time now and I can't praise it enough. It's beautifully simple to use and I still find quite magical its power to effortlessly convert any of my Basic programs — however stodgy, inelegant and unstructured — into a sleek beast that's fast-loading, fast-running and memory-saving.

For example, a Basic subroutine for copying the ROM character set into protected RAM, creating several UDCs and flipping up a screen design incorporating them took 41 seconds to execute.

The DTL version takes nine seconds. DTL boiled down a sprite editor I wrote by more than 2.2K and doubled its speed of execution. And a compiled 32K text adventure not only slimmed down to just over 27K but gave a speed of response that made the game a pleasure and not a pain to play. Also, loading time from disk was cut by nearly a quarter to 75 seconds; tape loading would show a proportional improvement.

Incidentally, I could have tightened up even on these figures if I'd taken the trouble to add just one line to the original declaring which variables (virtually all of them, actually) could be treated as integers.

Bear in mind that such improvements will apply also to the speed at which hi-res pictures are drawn, at which sprites move (so you can incorporate some real arcade action), and so on.

Another, almost advantage, is that you can write the original Basic program with only one statement per line and with stacks of REMs — so that it's easier to understand (especially months later). This is because the compiler ignores all such window dressing and so they won't use up memory or slow execution.

I don't think you'd be getting anything more for the money if you plumped instead for **Petspeed** (£49.95) and the documentation's pretty pale anyway. But **Speedwriter** at around £40 from Codewriter

and Stack's new **CBM 64 Compiler** at only £9.95 on disk must obviously be worth checking out.

Dedicated to adventure

Then there's always **The Quill**. The capabilities of this innovative software will surely be familiar to you (if not, re-read Roger Jones' thorough appraisal in our December '84 issue). Codewriter's **Adventure Writer** comes from the same family. Gilsoft have developed an extension for **The Quill** which allows for the creation of graphic examples; let's hope there'll be a version for the Commodore family soon. Incidentally, don't let this news delay you from buying **The Quill** now; the graphics feature will be an add-on and won't replace the existing product.

If your funds don't quite stretch to a compiler, you can at least do something to put some zip into LOADs and SAVEs, by processing your self-written programs (whether they be in Basic or machine code) through a utility which will convert it into a fast-loader. **Fastback** (Micro Centres, £9.95), **Hypersave** (Dosoft, £7.50) and **Zippo** (J Morrison Micros, £3.95) all do this with lesser or greater degrees of simplicity. A bonus is that programs so treated can't be listed or copied.

Finally, a word about the use of compilers such as **Jetpack** or **The Quill**. Neither you nor any software house which publishes a program created with their help will be infringing any copyright. It's good manners to acknowledge the use of the utilities in the finished program's credit screen or accompanying documentation (as does Hampstead, for example, which was written on **The Quill**). Otherwise, people like Gilsoft and Dataview-Wordcraft don't expect a penny from you.

Which is pretty decent of them really, when you consider that their products can transform your efforts into something which the likes of **Adventure International**, **Level 9** or **Melbourne House** could make into a hit. Now, where did I decide to hide the clockwork goldfish . . . ?

INTERPOD

Now the VIC 20 and 64 can communicate with PET peripherals

VIC and 64 users

Would you like to be able to access **any** of these peripherals from your computer?

- 1.3 megabyte disks (Commodore 4040 drive)
- 1 megabyte disks (Commodore 8050 drive)
- 10 megabyte disks (Commodore 9090 hard disk)
- Printers including a wide range of inexpensive IEEE and RS232 matrix and quality printers
- IEEE instruments such as volt meters, plotters etc.

Now you are no longer limited by the VIC or the 64's serial bus. Simply by attaching INTERPOD you can vastly increase the power of your VIC 20 and when used with the new 64, INTERPOD turns the computer into a really powerful system.

With INTERPOD the VIC and 64 become capable of running really professional quality software such as Word-processing, Accounting, Instrument control and many more.

INTERPOD will work with any software. No extra commands are required and INTERPOD does not affect your computer in any way.

Using INTERPOD is as easy as this:

Simply plug INTERPOD into the serial port of your computer, power-up and you are ready to communicate with any number of parallel and serial IEEE devices and any RS232 printer.

Simply incredible at **£59.95**

Prices include VAT, Postage and Packing. Delivery normally 14 days. Export orders at no extra cost. Dealer enquiries welcome.

COMMODORE 64 ON PRESCRIPTION

by Karl Dallas

Remember the days when chemists' labels used to be indecipherable? The combination of a mumbled consultation with a doctor, an equally indecipherable prescription, and a bottle of pastel-coloured liquid bearing the barely readable description saying something gnostic like "The Linctus, to be taken as directed", must have been fairly lethal at times.

You may have noticed that things have changed, and that a lot of chemists' labels seem to have become computerised, so you still may not know what you're taking, but at least you can read it.

At the beginning of last year (1984), a combination of the professional Code of Ethics laid down by the Pharmaceutical Society and actual government labelling regulations, have meant that all labels on professionally dispensed prescriptions must be mechanically printed in some way, and they must carry the following information: the name of the patient, the name and address of the pharmacist, the date, the quantity contained and the warning: "Keep medicines out of the reach of children".

And there's more, the label must also contain the name of the product (or, if preferred by the doctor, something more vague like "The tablets", the doctor's instructions on how the medicine should be taken and any other cautions, such as "May cause drowsiness" etc.

With the average pharmacist dispensing at least 1000 different products, coping with all that was a bit of a chore — and indeed Boots the Chemists asked for and obtained a special dispensation allowing them to start operating the new rules only at the beginning of 1985.

A number of chemists use the Epson HX20 portable printer for this purpose. It has

This month, Karl Dallas looks at an interesting use for the Commodore 64 in small business. A High Street chemist shop, to be precise, in which the 64, together with a printer and software, is helping to make the dispensing of medicines easier.

the advantage of a built-in microprinter that uses label-width paper, but its memory limitations, even in its expanded form, work against it. It is also rather slow.

Commodore in Crew

Thanks to a Crewe pharmacist, who first tried a system using the Commodore 64 in his seven retail shops and found it so useful that he's

now set up a special company to market the system, more and more chemists are finding a Commodore 64 set-up abolishes the limitations that held back the portable system.

John Williams originally wrote the program on an Olivetti and transferred it to a Sirius, but while the 16-bit machine was very fast and efficient it was obviously out of the grasp of many of Britain's

10,500 chemists, pricewise, so he converted it for the cheaper and more accessible 64.

The program consists basically of tape or disk plus an EPROM which fits into the cartridge slot. As originally designed, the EPROM acted as a buffer for the printer and loaded the drugs available into the system above Basic, making more efficient use of memory.

BUSINESS NEWS

Graphics for Vizastar

That long-advertised and awaited program, *Vizastar*, looks as though it has finally got its act together after a number of false starts. At the time of writing, the very sophisticated graphics add-on has become available, making possible the preparation of pie and multi-bar charts as well as the simpler bar and line charts available in the basic package.

The good news is that the graphics program is copyable, so it can be put on to every data disk. The bad news is that if you've already got *Vizastar*, it'll cost you another £14.95 for the good graphics.

Meanwhile, we are now promised the equally long-awaited 8K extra-memory cartridge for *Vizastar* which will also include the special graphics, at an all-in cost of £129.95. And the Pet version, to run on the 8296 with between seven and eight times the number of records on the 8250 disk drive than is possible on the wheezy old 1541, should be out, too, at just under £250.

Of course, 64 users who also own a business Pet can get the advantage of larger (and faster) disk performance from the 8250 — as long as they have some kind of IEEE interface. Kelvin Lacey of Viza Software says the *Interpod* isn't really suitable and recommends instead a DAMS interface. Of course, since the Viza memory cartridge has to be in place, this should be one that permits one cartridge to be piggy-backed on to the interface. Viza Software is on 0634 813780.

Packages from Practicorp

With the launch of the *Practifile* database, the PS programmable spreadsheet, the *Practicalc II*, a spreadsheet with WP option, *Practicorp* have now got what is a really powerful total package with a number of alternative options.

In many ways, *Practicalc II* can be considered as a more powerful version of the original program for the Vic and 64, with the addition of the word-processing option, which uses the "long label" facility to produce lines of text up to 100 characters wide, with most of the basic text formatting, block move, copy, delete etc functions available in a wordprocessing package.

The popularity of spreadsheets with "procedures", like Lotus 1-2-3 in the world of the more powerful PCs, has introduced the idea of programmable spreadsheets to the smaller user, and PS offers that facility. However, this is at the expense of a much smaller sheet: maximum size 2000 cells. The commands are in Basic, however, which don't require the learning of a special "macro" language, though some extra commands are also supported.

Practifile is a medium-power database, allowing a maximum of 20 fields per record, shared between a maximum of 254 characters, with no more than 79 characters per field and no more than 70 characters per field name. The number of records per file is dependent upon record size, but could be as many as 3876 on a 1541 or 7090 on an 8050.

All the *Practicorp* programs can access each other's files, but this facility is not too well documented.

Practifile costs £44.50; the other two new programs cost £69.50 each. More details on 0473 46271.

Micro Swift pops up

Still on spreadsheets, *Audiogenic* have produced their *Micro Swift* spreadsheet, sharing the pop-up menu concept with their very excellent *Micro Magpie*, at £19.95, making it a really powerful, really friendly program at a really bargain price.

It has a total of 6600 cells — labelled A to Z horizontally and 1 to 254 vertically — though to be fair, most packages run out of memory before they run out of cell space.

The spreadsheet is programmable, and the program procedures can be called from a menu, or implemented directly. Four applications "templates" are included on the disk: home budget, car costs, loan analyser and expenses.

Audiogenic have obviously found some market resistance to their previous policy of cartridge-based programs with quite lavish manuals, since they have now produced both *Magpie* and *Wordcraft* on disk, at a lower price, with slightly abbreviated but still adequate manuals.

This now means that there are two *Wordcrafts* on disk for the 64, from *Dataview* (who wrote the program) for £49.95, and

Audiogenic's for £24.95. Confusing!

Busicalc threesome

Supersoft has announced three new versions of their *Busicalc* spreadsheet, for the Commodore 64 and for the 32K and 96K versions of the 8000-series Pets. The 64 version of *Busicalc 3* costs £75 and offers nearly 2500 cells organised as up to 999 rows or up to 200 columns.

Obviously, since the number of rows multiplied by the number of columns equals nearly 200,000 cells, you have to decide whether you want a tall skinny sheet or a short fat one.

There are 1500 cells organised into up to 750 rows or 200 columns on the 8096 for £125. The 8032 version, with 500 cells, also costs £75.

Busicalc 3 has "three-dimensional" calculating capability, meaning that sheets can be added or summarised on another sheet, and that formulae can be used to extract very sophisticated breakdowns of data on other sheets.

The 1541 disk version comes with a special fast loader, which cuts down *LOADing* time from 90 seconds without the loader to 30 seconds.

Searching for Paper Clip

Who is importing *Paper Clip* (if anyone)? Callers to *Kobra*, the old importers, are referred to *Handic*, who deny all knowledge.

Some dealers have stocks, possibly from the time when it was freely available, and when they're gone there may not be any more.

A pity, since *Paper Clip*, from the Canadian company *Batteries Included*, is/was one of the best post-formatted word processing programs around, with sophisticated sorting and column move commands not generally available.

Database from Handic

Meanwhile, *Handic* themselves are planning to launch a new database program, called *Data Base 64*, which has quite an attractive spec: 3800 records on a 1541 disk, record length between eight and 254 characters, spread across up to 18 fields of up to 27 characters per field.

It's claimed to be very fast, with an average of one second for search on a key (most DB programs are even quicker on the "next" search criteria, and possibly this will be no different).

It will work with all Commodore printers, including the 1526, which gives problems to some programs. Price is expected to be about £70. *Handic* is on 0344 778800.

But it's now being re-designed to put the entire program on to the EPROM, making it available on power-up. As it is, the program takes about three minutes to *LOAD* from disk, or 15 minutes from tape.

Drugs in memory

The system comes complete with 800 of the most likely drugs pre-programmed into it, and the user can input a further 400. Any of these can be selected either by their initials or a code letter or number.

If the drug prescribed is not included in that 1200 drugs total, then it allows the name to be input specially.

The doctor's instructions are coded into three sections, the first being the quantity (eg "one tablet"), the second the action to be taken (eg "to be taken") and the third the frequency (eg "three times daily after meals") or whatever.

How it is taken is linked in the program with the drug name, so the second part of the instructions is automatic. There's no risk of the patient being told to rub an aspirin on his leg before taking a bath, as the programmer's son, Stephen, laughingly pointed out.

In all there are 24 pre-programmed instructions within the program, and the pharmacist can add up to six more. There are also warnings and advice, like not mixing certain drugs with alcohol, or to be taken with food.

The program needs a Commodore 64, tape recorder or disk drive, an Epson FX80 or RX80 printer, and a monitor. The whole package, including the hardware, sells at £948.75 (£851 to members of the National Pharmaceutical Association), from *Williams Applied Computers*.

Virtuals

EPIDEMIC —

by Frank Rooney

Watch out, there are some nasty germs about! Oops, too late. Stanley has already contracted a disease. So now it's up to you, the antibody, to stamp out the germs before they reach epidemic proportions.

To kill a germ you simply have to move into it. You can move vertically, horizontally or diagonally. The type of disease to be combatted is determined by which of the three skill levels you reach. Get to level three and you'll have the dreaded *Leptospira Canicola* infection to deal with. And the nastier the disease, the faster the germs multiply.

If the disease gets out of control then poor old Stanley will be forced to resort to penicillin. Your mission will have failed! Full instructions are included in the game.

This is a card game based on the 'Play Your Cards Right' theme, in which you have to decide whether you want a low or high value card. Pairs, full house, flush etc are included and bonus points are awarded for any hands that appear in a winning sequence. You start with 50 points and you get ten attempts to reach a high score or go broke — the graphics and sound are pretty neat, too.

Here's a description of how the program works:

(see over)

Victuals

The main variables used are:-

B\$ — Card face down

F\$ — Card outline

A — Array to hold cards showing

D\$ — Suit of selected card

W\$ — Select Higher or Lower

M — To print card in correct position

Line 10

Set W\$ to "H" to print first card

Line 20-140

Subroutines for each card

Line 150-160

Set variables for card face down, blank cards, sound, colour, and starting point (F)

Line 170-200

Set up initial screen with

five cards face down and as W\$ was set to "H" in line 10 goto card selection routine at line 515

Line 320-350

is a for next loop for each card

Line 360

Go to win routine at 700 if all correct

Line 400-470

Check for successful prediction and adjust accordingly

Line 500-525

Input prediction, card selection and positioning routine

Line 530

Selects the correct colour for the suit

Line 535-537

Checks that a card is not

being duplicated by comparing the current card with those already showing. Selects another card if necessary.

Line 540-550

Go-sub to print card

Line 700-790

Win routine. Checks for any pairs, flushes, full house etc, adjusts points score and re-runs from line 170.

Line 900-905

Broke routine. Plays the Death March while printing You're Broke down the screen.

Line 1000

Checks if score is eligible

for Hi-Score Table.

Line 1002-1003

Enter Name.

Line 1005-1070

Sort routine for Hi-Score Table.

Line 2000-2070

Print Hi-Score Table and Another Go?

Line 3000-3010

Data for Line 900.

```

Castle Of Terror is a superb graphic adventure game set in the 1880's when and where "Dracula" stories abounded. You are in a village near a large Castle in which the secretive Count lives. You must travel about the village, collecting items which may be of use to you on your bold mission.

You must also find out what your mission is by talking to the right people. But don't be fooled!

- ★ Multi-word "English Language" style input
- ★ Superb, highly detailed graphics
- ★ Animated characters, special effects and sound.

Surviving is success enough, but escaping with the treasure is the ultimate achievement and won't be easily accomplished!

Tank Ambush is taken from the Commodore 16 Games Book by Melbourne House.

FOR THE COMMODORE 16

seeking missiles.

These missiles will always home in on your tank. You can shoot them with keys 1 to 8, or manoeuvre by pressing Q for up, Z for down, I for left and Z for right.

Have an enemy helicopter that fires heat-seeking missiles at your tank — shoot them or avoid them by manoeuvring.

Introduce limited ammunition in the tank and ammunition dumps (where the tank must wait until it is reloaded). Give the killer tank hit points so it can suffer up to five hits before being destroyed. Also, create a repair station to fix up damages, and create the fuel for the killer tank and fuel dumps where it can refuel.

Program Variables

- SC Screen memory
- CC Colour memory
- BR Background brightness level
- LV Level of difficulty
- TB, TC Character and colour beneath tank
- F\$ Fired flag
- X, Y Co-ordinates of tank
- E Delay for moving missile
- EX, EY Co-ordinates of enemy missile
- EB, EC Character and colour behind missile
- SX, SY Howitzer shell co-ordinates
- GB, GC Character and colour behind shell
- D Firing direction
- PT Score

Gunslinger
Vic 20 (+16K)
Keyboard or joystick
Omega
Price £1.99

Presentation: ■■■■□
Skill level: ■■■■□
Interest: ■■■■□
Value for money: ■■■■□

Be of good cheer Vic owners, Omega are re-releasing established titles, thinly disguised, at rock-bottom prices.

This two-player game features a fully expanded arena for a quick-on-the-draw contest. I can't see any way of outsmarting the computer, unless you are a might quicker than a microchip — so there must be two of you for the game to be playable.

The gunslingers are readily recognisable as mean hombres

as opposed to token squiggles. Cacti offer cover as does the occasional stagecoach and the cheery undertakers are on hand to tidy up. There really isn't too much to the game — just the duel, with good graphics and decent sound and if that's all you want . . .

If Omega continue with this policy there should soon be some ace games sloshing around at silly prices. Does it really matter it has been around for years?

Dodo Lair

To describe this space battle as frantically fast and furious is an understatement. I have been through all eight waves of Arcadia (a noted toughie), but I could hardly dent this one.

There is a technique . . . bob up and down to clear a path. Anyway, the old faithful spacecraft has been unleashed against a host of megarrific aliens who are cemented together by their loyalty to a Dodo. There are nine waves to survive: you are static

while the horrendous hordes scroll your way, lobbing the odd star shell or something similar.

The purple meanie missiles must not be allowed to reach your side of the screen while the more you blast at the Buildas, the quicker they multiply. Smash through using a shield, unless you can shoot faster than they can breed.

This has good battle sounds, bright colours and is well worth the frustration it causes.

Many 3.5K Vic games are blighted by crummy graphics and threadbare scenery — often just the one screen.

One solution employed by considerate authors is the expanded screen with jumbo characters. Another option has been adopted here . . . multicolour-mode.

The place is a hot oven, the first of ten and the heat is on. Your only hope of not ending up as calamari is to pick up drops of

water condensing on a pipe and quench the flames before the temperature hits boiling point. Sizzling fat spurts up and all that cholesterol can't be too good for your general health. Apart from fresh layouts replete with blocking ledges and oven foam to boot, there's a pugnacious pooch (him of the title) to contend with. Deserves to be bought.

Originally imported from Germany by Anirog and now doing the rounds again with a different cassette insert.

You control a wedge-shaped flying machine which also doubles as a gun-cum-fortification maker. Dodging about behind barricades, you exchange fire with trundling armoured vehicles. These have to be weak before they crumble.

To keep the interest going, each armoured wave is of a different mark (I saw four types), yet the graphics are too small to be worthy of any attention in their own right.

At least the format is entirely distinct from the two-up Tank Duel efforts and does allow for tactics to be evolved.

This is a value for money shoot-up with ten levels of skill.

Space Shuttle
Commodore 64
Activision
Price £9.99

Presentation: ■■■■□
Skill level: ■■■■□
Interest: ■■■■□
Value for money: ■■■■□

You are in the hot seat of the Space Shuttle Discovery. The object is to achieve orbit, dock with the satellite as many times as you can and, finally, point the thing Earthward and land it.

As you can imagine all of this is not accomplished without a little difficulty, which is why those nice people at Activision give you a 36 page flight manual to help you work it out. Like most

flight simulators the game relies less on manual dexterity than the ability to simultaneously read a dozen different instruments and make appropriate course changes.

It should prove a challenge to all but the most accomplished simulator pilots. Graphics are good and sound, whilst used sparingly, is realistic.

IF YOU OWN A COMMODORE 64. YOU CANNOT AFFORD TO IGNORE THESE OFFERS

- Will print the full CBM character set

SCREEN SCENE

Bear George
Commodore 64
Cheetahsoft
Price £6.95

Presentation: ■■■□□□
Skill level: ■■■□□□
Interest: ■■■□□□
Value for money: ■■■□□□

A hungry looking Bear George is wandering around in the orchard looking for windfall apples to eat, so he can become fat enough to go and hibernate.

To hinder you further a pesky squirrel keeps dropping nuts from the boughs above. If one of these hits George on the head it causes him to fall on his bum and lose some of his hard-earned fat.

After munching apples George is magically transported to a holi-

day skiing resort. George must make his way to his cave avoiding such hazards as manic skiers, spiders, and a caged truck which carts him back to the orchard if he's not fat enough to go bye byes for the winter.

I tired of this game fairly quickly. The two screen scenario is limiting and leaves much to the imagination. The graphics are at best average and at worst badly programmed.

Snokie
Commodore 64
Funsoft/U.S Gold
Price £9.95 cass
£12.95 disk

Presentation: ■■■■□□
Skill level: ■■■■□□
Interest: ■■■■□□
Value for money: ■■■■□□

The theme to this game is a familiar one. The hero is a character called Snokie, a cute looking pink penguin, who can jump pretty well but can't fly. Contact with water usually proves fatal.

Snokie's most immediate concern is that his girlfriend Cara has been abducted by the evil Grodies (boo hiss).

You have to guide Snokie through seven screens to reunite

him with Cara. There are hazardous glaciers with deadly boulders to be negotiated, moving ice floes to be hopped across, and falling icicles which threaten to spear you at every move.

The graphics are imaginative and well done. When Snokie cops it a skull appears in his place accompanied by a catchy little tune. On the whole the game is very enjoyable and highly addictive.

Kong Strikes Back
Commodore 64
Joystick only
Ocean
Price £7.95

Presentation: ■■■■□□
Skill level: ■■■■□□
Interest: ■■■■□□
Value for money: ■■■■□□

This time round our Thrilla Gorilla arch enemy has taken a fancy to roller-coasters. Barrels are out, cars are in. These respond to the laws of gravity by changing pace on the slopes — a trap for the unwary.

Armed with four bombs, you must reach the top of the switch-back to effect a rescue. Grab the various bonuses from the ladders and prepare for the second of the four tortuous circuits. From now

on fairground objects exert a stronger influence on the proceedings and even custard pies muscle in on the action.

A worthy follow-up to the original, with a well developed theme, right down to the hurdy-gurdy music. The screen spills over into the border, reflecting the overall quality of this program: in fact everything has been refined and polished for maximum enjoyment.

Raid On Bungeling Bay
Commodore 64
Ariolasoft
Price £9.95 cass
£12.95 disk

Presentation: ■■■■□□
Skill level: ■■■■□□
Interest: ■■■■□□
Value for money: ■■■■□□

The story so far. The evil Bungeling Empire is churning weapons damage and restock with bombs.

The objective is twofold. Firstly to bomb the factories out of existence, secondly to defend your carrier. The game requires more attention to strategy than your average 'shoot 'em up'. Graphics are well used and the wrap around screen adds to the realism of it. Nice touches include a newspaper story and victory parade if you are successful.

The objective is twofold. Firstly to bomb the factories out of existence, secondly to defend your carrier.

The game requires more attention to strategy than your average 'shoot 'em up'. Graphics are well used and the wrap around screen adds to the realism of it. Nice touches include a newspaper story and victory parade if you are successful.

Starace
Commodore 64
Mastertronic
Price £1.99

Presentation: ■■■□□□
Skill level: ■■■□□□
Interest: ■■■□□□
Value for money: ■■■□□□

Starace is one of Mastertronic's £1.99 range and as far as this one is concerned I'd say it was overpriced.

The planet Alpha One is dying and the humanoid inhabitants have to find a new home. You are one of the space fighters sent out to accomplish this task. On your quest you must travel through five galaxies.

In Galaxy One three of the aforementioned aliens attack your ship and as you can't fire back you must run away!

In Galaxy Two, you must avoid the asteroids and fireballs. There aren't that many of them so colliding with them is probably almost as difficult as avoiding them. Galaxy Three is more interesting. Pilot your ship into the gravitational beam of the mother ship to achieve docking whilst avoiding the asteroid shower (more of a light drizzle).

This version is much too easy to be any fun.

SCREEN SCENE

Cadcam Warrior
Commodore 64
Taskset
Price £9.95 cass
£12.95 disk

Presentation: ■■■■■
Skill level: ■■■■■
Interest: ■■■■■
Value for money: ■■■■■

CADCAM is an acronym for Computer Aided Design-Computer Aided Manufacture which is a reality here and now. But for the purposes of the scenario we have jumped into the future to arrive at the inception of a new processing unit. Cadcam Technology have booked a whole floor at the 25th Cadcam International Show to demonstrate their remarkable machine. Naturally security is

tight. Problem is the machine's gone up the creek and no-one can break the security to fix it. The memory bank dedicated to human needs has gone down. There is no time for a major overhaul but there is time to send in the mini-android MAD 2.

He must work his way across a series of 3D metal plates, exploring both surfaces and taking the necessary steps to clear each screen of the system's defences

Black Thunder
Commodore 64
Quicksilva
Price £7.95

Presentation: ■■■■■
Skill level: ■■■■■
Interest: ■■■■■
Value for money: ■■■■■

Loco was a great game from the self-taught Tony Crowther, written while he was with Alligata. While awaiting (eagerly!) for the follow-up on the Gremlin Graphics label in zoomed Black Thunder courtesy of Quicksilva. Never look a gift-horse in the mouth, even if it is mutton dressed up as lamb. Loco now looks positively homespun by comparison, as you stealthily ease into the purple death mobile.

Your ambition is to escape from the confines of a futuristic city; Mr. Nasty's aim is to keep you there. As you make a dash for it, it dawns on you that droid tanks are careering towards you; helicopters and missiles are tracking from behind and somewhere above are malevolent UFOs, which seem indestructible from where I'm standing. You're bristling with shells, a forward and a rear gun (you control the

Alien Argus
Commodore 64
Price £8.99

Presentation: ■■■■■
Skill level: ■■■■■
Interest: ■■■■■
Value for money: ■■■■■

Try and kill the alien by commanding the crew to move around the ship and carry out various instructions. The alien can be killed either by shoving it out of an airlock or by self destructing the ship and evacuating (only if there is nobody left alive). You have to take Jones, the ship's cat, with you. Mother, the ship's computer, won't launch the lifeboat if you've left anyone behind.

Three types of information are displayed on the screen for three decks on the Nostromo and you can obtain a map of any one of them. This enables you to select individual crew members and instruct them using a menu system, though the crew may not always obey you. Each of them has their own personality

Hunchback II
Commodore 64
Joystick only
Ocean
Price £7.95

Presentation: ■■■■■
Skill level: ■■■■■
Interest: ■■■■■
Value for money: ■■■■■

Level or platform games are almost two-a-penny these days. Well, this offering probably won't lead to early retirement for all at Ocean but it does have plenty going for it. It has an identity, it's not Jet Set Willy in dark glasses nor Chuckie Egg in drag. No, this climbing caper exudes the aroma of old Notre Dame, cartoon style.

during many hours of compelling play as you strive for the next screen. The denouement centres around a clock tower, with clockwork mechanisms, cogs and winding gear... all Hunchback mincemeat-makers. Of course, there are also the bells, the bells! These replace the standard power pills or keys. Mopping-up the complete set leads you further up the clock tower where you get to ring the

Quasimodo and friends will keep you wiggling the joystick

Questprobe featuring Spider-Man Adventure
International
Price £6.95

Presentation: ■■■■■
Skill level: ■■■■■
Interest: ■■■■■
Value for money: ■■■■■

If you like Marvel comics — even though DC are better — I'd say there's a fair chance that this will be your kind of thing. It's another Scott Adams adventure game, this time featuring Spider-Man.

In your travels you bump into many of Spider-Man's foes — Doctor Octopus, Hydro-Man and Mysterio to name but three.

The big problem with Spider-Man's foes is that they might just as well be blocks of stone. I tried kicking Hydro-Man and he re-

mained inert. So, after a pause for thought I decided that jumping on him from the ceiling would probably do the trick. Still no reaction.

Shouting abuse was equally ineffective. Perhaps I needed more points before Hydro-Man would take any notice of my kicking and foul language. Either way I felt there was a definite lack of action considering the abundance of evil arch-criminals and superheroes.

(by shooting, gathering or what-ever) to enable further progress. The defences are computer generated making everything logical — it's up to MAD 2 to crack the pattern and decipher through 8,192 screens using as many short-cuts as possible. Must be described as innovative and fresh. Taskset regard

Each plate is depicted in full perspective, with ridges and holes connecting the two surfaces. The action is pure arcade

altitude of fire on this one) and further supplies of ammo en route. Put up a defensive umbrella, but be cagey.

The screen is divided horizontally; the lower portion is a scrolling radar display of the road network (which makes Spaghetti Junction look like a slip road) showing your position and the approach of danger. The business half is a constantly

reinforced with interlacing puzzles; in fact it's almost a project. The challenge of Cadcam Warrior lies in the tactical problem of plotting your way through 8,192 screens using as many short-cuts as possible. Must be described as innovative and fresh. Taskset regard Cadcam as their best yet. Having just seen Beside the Seaside I disagree — see next month's User and decide for yourself.

moving panorama of the cityscape with the interceptors superimposed. You can watch your missiles launch, judge their height and thrill to direct hits. Apart from a tingling tune the program speaks to you: "Get ready"; "Game over"; "Your score is . . ." which gives it an arcade feel, but may also get on your nerves after a while.

Tony Crowther's next game will also be on the Quicksilver label.

and if you instruct a queasy crewmember to attack the alien they may think twice. Another complication is that one of the crew is an android and you don't know which one it is.

If a crew member is attacked by the alien the map area fills with a large image of the writhing monster. This can be quite unnerving. There are a number of possible conclusions to the game. If you are ultra-successful the alien can be killed

with no crew losses. Alternatively, you can bungle the whole thing by running out of oxygen or setting the self destruct and not giving yourself time to launch the shuttle.

However well you do, the game remains exciting, nail biting stuff. 'In space no one can hear you scream' the blurb says. My neighbours aren't so fortunate — I've been giving them a hard time. But who needs neighbours with entertainment like this.

big daddies and free Esmerelda into the bargain.

Each stage encourages athletic rope work as you switch bell pulleys to access ledges. Hooks and moving platforms are auxiliary modes of transport, with the ever present threat of a mangling in the giant screws and cogs below. These are most realistically portrayed as is the bone crushing. In the first three screens I only encountered bats.

There are two more stages plus the belfry where fireballs, arrows, cannonballs and axes are promised. Reach the finale, ring the bells and rescue 'er indoors.

Hunchback I was the game that put Ocean on the map a year ago. Now — whether it's Daley Thompson or Frankie Goes to Hollywood — there is an Ocean game to match.

Spiderman is the second in the Questprobe series. There will be 12 games in all.

Adventure expert Keith Campbell says that each of the Marvel games are linked — though in a way not immediately obvious to the player. "To tell you might spoil your enjoyment . . . suffice it to say that I was once again in awe of Scott's ability to create something exciting, original, and downright devious."

Scott is pretty impressed with

the comic idea himself. "Adventure players are going to start reading comics again . . . it'll be more fun if you read the comics, but it will not be any easier," says Adams.

On the plus side the graphics are brilliant and lose nothing in the transition from comic book to computer screen. But it takes more than a pretty picture. Can't see this rivalling the rest of Scott's output. Check the Hulk if you want a real Marvel adventure.

Value for money: ■■■■■

If you've ever stood at a bar for what seemed like an eternity in pursuit of an alcoholic beverage or been rushed off your feet by thirsty punters serving on the other side, then this is the game for you.

Tapper casts you in the role of the frenzied bartender whose job it is to keep a never-ending stream of thirsty customers supplied with a never-ending stream of glasses of soda. We begin the tour of Sodaland in the Old West Saloon. The doors have just opened and the parched cowboys make their way to the bar. It's your job to quench their burning thirst.

The trouble with the crowd here is that they're not very polite. When they finish drinking there's no 'excuse me can I please have another when you're ready', they just sling the empty straight back at you. If you're not at the end of the bar to catch it — smash! And the boss doesn't like it when glasses get broken . . . You remember I said the customers were rude? Well, if one of them gets to the end of the bar before you've served them they'll pick you up by the scruff of the neck and sling you down the bar just like a soda!

If you prove a success in the Old West Saloon you get to move on to the 'Jock's Bar'. Jocks, we are told, are sports fans. These boys are pretty rough, they drink Green Chartreuse by the pint and woe betide anyone who gets in their way when Scotland get

knocked out the World Cup or if they happen to see a Rapide Vienna fan.

En route to the Jock's Bar is the Bonus Round where you will meet the Soda Bandit. The Soda Bandit is a sort of Marty Feldman character with big bulbous eyes and a black hat. He shakes up five cans of fizzy drink, and then switches them around. To get a bonus you have to pick the unshaken one. You get to play the Bonus Card every time a bar is successfully completed.

And so you go on your merry way. If you make the grade as a bartender at the Old West Saloon and the Jock's Bar you will get to work the Punk Rocker's Bar and the Space Bar. The graphics and music are excellent and varied, and the frantic nature of the game makes boredom a very remote possibility. But I'd better not keep you any longer — your customers are getting thirsty!

Operation Salvage

How to recover a corrupted or NEWed program

by Frank Randall

Your average creased and haggard programmer won't hesitate to tell you that not being able to recover a corrupted or accidentally NEWed program is a frustrating experience. To avert premature baldness, here's an easy step-by-step method of overcoming those problems — and it works for both the Vic and Commodore 64.

Anyone who has spent a great deal of time entering a program only to find it will not reload from tape knows how frustrating programming can be. There are many reasons for tape read failures. Often the program or part of it is in memory but is not accessible because the internal pointers have not been set up correctly by the loading action, or the pointers have been overwritten. They will neither LIST nor RUN. But with a little patience and some fiddling, recovery of either the whole program or part of it is often possible.

Here's a description of the steps to take. The procedure is in the form of a series of Basic commands entered in direct mode. That means you don't need to type line numbers. How it works is explained later. For now, all you need know is that it works equally well on Vic 20s and Commodore 64s.

How it's done

We start by typing in these three lines.

- Step 1** — Type `POKE 45, 200 : POKE 46, PEEK (56) - 1 : CLR` and Press Return
- Step 2** — Type `A = PEEK(43) + PEEK (44) * 256` and Press Return
- Step 3** — Type `FOR J = 1 TO 10000 : PRINT PEEK (A + 2) + PEEK (A + 3) * 256; A: A = PEEK(A) + PEEK(A + 1) * 256 : NEXT` and Press Return

This will produce a list of pairs of numbers that scroll up on the left side of your screen. Holding down the Control key slows down the display. On each line the first number is the Basic line number, and the second is the address of that line. Watch for an odd looking line number; that is, one that is out of ascending sequence, followed by a line with a zero address. Then press the Runstop key. A simple example of the display would look like this:

```
10 4097
20 4176
30 4205
40 4268
1307 4301
26 0
7096 37168
```

BREAK

Take the address prior to the zero (in the example, it's 4301), add 2 to it and call the result x. Then you need to enter some more commands:

- Step 4** — Type `A =` and the number called x. Press Return
- Step 5** — Type `POKE 45, A - (INT (A/256) * 256); POKE 46, A/256; CLR` and Press Return

The program should now list and run normally.

How does it all work?

To understand how this technique works you need to understand how programs are stored in memory and what pointers the operating system uses. Each Basic line starts with a two-byte link to the next line and two bytes for the line number. Both are in the usual Commodore low byte/high byte format. Thus, to get the actual number multiply the 2nd byte by 256 and add in the first byte.

Various pointers are used by the operating system, but those used in the procedures described in this article are:

- Start of Basic — locations 43 and 44
- Start of variables — locations 45 and 46
- End of available memory — locations 55 and 56

Provided these are set correctly, the others are set automatically by the CLR command.

The object of typing **Step 1** is to set the end of Basic pointer to an artificially high value so that when the later commands create variables they do not overwrite the program to be restored. **Step 2** initialises variable A to point to the first Basic line, and **Step 3** is the loop which converts the line number, prints it and the address in A, and sets A from the link address in that line. Basic programs end with a link address of zero, hence the need to add 2 to the address of that line before typing **Step 4**. **Step 5** formats the adjusted address to low/high and sets the pointer in locations 45 and 46 ready for the CLR.

Salvaging a corrupted program

If the end of a program has been overwritten such that the zero link

address is missing, an extra bit of work between **Steps 3** and **4** will salvage most of the program. It is important to avoid listing the program if this is suspected as this may result in the system crashing.

Go through the procedures outlined above up to and including **Step 3** and watch out for an out of sequence line number which is where the corruption starts. Subtract 1 from the address of that line, call it x, and then:

```
Step 6 — Type POKEx,0 :
           POKEx + 1,0 :
           POKEx + 2,0 and
           press Return
```

Remember to type the value of x, not the character 'x'. Add 3 to x and then continue with **Steps 4** and **5** as described above. Part of the last line of the program salvaged in this way may be rubbish but it can be edited or replaced in the usual way.

Recovering from NEW

Another use for this technique is where the initial link has been destroyed by typing NEW. To recover the program in memory, type **Steps 1** and **2** and then:

```
Step 7 — Type FOR J=ATOA + 255
           : PRINTJ ; PEEK(J) :
           FORJ1 = 1TO100 :
           NEXTJ1,J and press
           Return
```

Ignore the first four bytes, watch for a zero byte and then press the Runstop key. Call the address after the zero byte x, type the command at **Step 2** again and then:

```
Step 8 — Type POKEA,x - (INT
           (x/256)*256):
           POKEA + 1,x/256
           (remember to use the
           value for x) and
           press Return
```

The missing link address will have been restored but **Steps 3** to **5** must be taken to restore the other pointers and the job is complete.

A few minutes spent fiddling in this way could save hours of retyping. Happy recoveries.

The imaginative pen of top 'Fighting Fantasy' writer Steve Jackson brings you the complete computerised, role-playing adventure package.

Your 'Game Pack' will consist of a full length adventure story and the most intriguing, complex and exciting computer program yet to be released.

As the adventure unwinds you will become

'The Swordmaster', it will be up to you, and you alone to overcome every diabolical adversary sent against you. You'll experience combat routines of such excellence you will have to gain more and more experience to delve deeper into this compulsive adventure.

Dare you enter 'The Swordmaster's' realm? . . . find out in February '85. For the Spectrum 48k, Commodore 64, plus most other popular micros'.

PLUGGING INTO EPSON

The Comprint Epson/Centronics interface reviewed

by Chris Durham

Commodore users have always mourned the fact that only a Commodore printer will plug straight into their computer. Using a non-Commodore model means buying an interface adaptor. But which do you choose? It might be easier if there was a special interface available for the printer you want to buy. Like the Comprint interface from Micro Control Systems, especially designed for a Commodore 64 and an Epson or Epson-compatible dot matrix printer. At £61.99 it's not cheap but it allows you to use that coveted Epson. Chris Durham plugged in and used it to write this report.

Interfaces for non-Commodore printers have been around for almost as long as the computers they work with; for the simple reason that Commodore home computers use a non-standard method of serial communication for their printers. The common standard for most cheap printers is Centronics parallel, with RS232 serial coming a more expensive second. While the new Commodore printers are catching up on the quality and value for money at the lower end of the market, there's always been a demand for interfaces that would allow 'near letter quality' (NLQ) dot-matrix

printers such as the Epson to be attached to the Commodore home computers, particularly for use with wordprocessing programs.

The early devices merely did the character conversion necessary, without allowing the user to print the Commodore character set. Later models actually allowed the Commodore character set to be printed, including the 'reversed graphics' that represented the control codes. Now, we have interfaces that not only do all this, but convert the control codes into readable strings, make the printer act either like itself or as a Commodore printer

and even allow you to preset 'format strings' which determine how lines are printed. Such a beast is the **Comprint** interface from Micro Control Systems.

Comprint — the hardware

It is designed to fit inside an Epson (or compatible) printer, with just a single Commodore DIN-plug lead connecting it to the computer; in other words exactly the same as a Commodore printer. Not only that, but it has two serial port sockets, enabling you to connect a second printer/plotter without

TABLE 1

PLUGGING INTO EPSON

difficulty (even Commodore themselves don't do that). Fitting the board inside the printer means that you have to remove the top as the board must be screwed into the slot provided. This is not a difficult operation, provided you follow the instructions.

The only slight problem with fitting the board inside the printer is that this is where many of the print buffers fit as well; so if you already have a printer buffer, whether internal or external, you won't be able to use it with Comprint. I understand that Micro Control Systems intend to produce a version which includes its own buffer (up to 32K), which should help solve the problem. The existing board already includes a 2K print buffer, emulating the one on the *Epson FX-80*. This is good news for those of you with the *RX-80* or the earlier *MX* series, since this means that you can now get downloadable characters as well. Since you already get the Commodore character set in full you can use this facility for all sorts of other characters.

On the Comprint board itself are three 'jumper' plugs, which determine which mode the board is in when it powers up. Unfortunately these are on the left-hand side of the board. Since the Epson has a removable cover on the right hand side of the printer you cannot alter the jumper connections without taking the top off the printer each time. The suppliers have said they are considering moving the jumpers to the other side to allow access through the Epson 'hatch'. Although the modes can be changed through software, this is not possible if you use a cartridge-based word-processor so it is worth making sure you set the board up in the straight-through mode from the start. This allows printer control codes etc, to be passed without getting converted. The other modes are to allow different Epsons to emulate the corresponding Commodore printers; eg mode 2 is for the *MX-100*, *RX-100* and *FX-100* and allows the full width of the paper to be used.

Hardware hiccups

As with all non-Commodore products, there always tends to be a little unforeseen hitch and Comprint is no exception. You cannot have the interface connected unless all the devices on the serial bus are switched on. This may seem a small point, and will probably not affect many people, but if I am doing a quick test of something on the computer I don't always bother to switch on the disk drive if I don't need it. Under these conditions, with Comprint connected, the computer will not power up correctly; switching the disk drive on after the computer causes a reset, ignoring any cartridges that are connected.

the manufacturers come up with a new idea they only have to change the ROM and you have instant new facilities. This was graphically illustrated when I received a new ROM halfway through the review which added the facility to print out the control codes in listings, an option previously lacking on Comprint.

The facilities are all controlled by 'secondary addressing'. Those of you who have used Commodore printers will know that this is a way of sending additional information to the printer when you open a print channel; for example **OPEN4.4.7** opens a Commodore printer in lower case mode, where '7' is the 'secondary address'.

TABLE 2

0	— Print data as received (default option)
1	— Print data according to a previously defined format
2	— Send format string
3	— Set number of lines per page
4	— Enable diagnostics
5	— Define programmable character
6	— Set spacing between lines
7	— Set default character set to lower case
8	— NOT USED
9	— Suppress diagnostics
10	— Reset printer
11	— Change printer type (change mode)
12	— Enable control code conversion
13	— Disable control code conversion

Thus if you want to run a cartridge program or a game, either unplug the printer connection or ensure everything else is switched on first. However, it is not even this simple, because if you switch off your printer (to set the 'top of page' for example) and then turn it back on again it also causes the computer to reset — losing all the text in your WP unless you had already saved it. I know, because it happened to me. This is potentially more serious and needs looking at by the manufacturers.

The software

The great advantage of this sort of interface is that there is no software to load or run before you can use the printer; it is all contained in a ROM on the board itself. The interface is in reality a self-contained, dedicated computer with its own 6502 processor, enabling it to do all the fancy things that it does. The ROM contains the control program for the whole process. This means that when

Comprint uses a similar syntax, but unfortunately the method is not always the same. Under normal circumstances you would continue printing on the channel that you opened until you had finished, but Comprint is different in that some 'channels' are for commands only; you can't send any text on them.

Thus **OPEN12.4.12: PRINT #12: CLOSE12** sets the 'control code conversion' mode; you still have to send the listing on logical channel 4, for example, **OPEN4.4: CMD4: LIST**. Table 1 shows the control code conversions (just what you need for *Vic-tuals*). Table 2 shows all the facilities available on the secondary addresses. There is even an option (4) which will tell you what the errors are if you make a mistake in the other commands — very clever!

The format control is worthy of mention. This allows you to preset the form that a printed line will take, both numeric and textual. It can be used to set up columns of figures, truncate strings to the

same size, format a date correctly or even produce leading and trailing zeros in a number. Characters can be included in the format that are added to the text received from the computer — all in all, very impressive.

The instructions

With such a wide range of commands it is vital that the instructions allow the user to get maximum benefit from the interface. While some of the facilities were clearly explained, others were passed over with little explanation and no examples. The new commands, using secondary addresses 12 and 13, were on an Addendum sheet that was very unclear. However, I am assured that the new instruction book will be much clearer and will include more examples. The only way to really get to know what this beast will do is to try out all the examples and options. It won't be a quick trial, there's far too much to learn, but once you have mastered the facilities, there seems little you won't be able to do.

Conclusions

This is one of the most versatile printer interfaces I have used. It offers a wide range of facilities which include printing the full Commodore graphics set, converting the control codes to meaningful strings and being able to format the printed output as you wish.

With your Commodore computer, your Epson printer and Comprint you will have a combination that will do almost anything you ask of it. For those who do not own an Epson, Micro Control hope to market versions for other printers too. At £61.99, I consider it good value for money. My one proviso is that the problem of resetting the computer when anything on the serial bus is turned on needs looking at.

LAS VEGAS

MOON BUGGY

FLIGHT PATH

OUT ON A LIMB

TURBO FAST LOADER

LAS VEGAS Las Vegas brings all the challenges of a deluxe arcade fruit machine direct to your fingertips. Many exciting features include, gamble, cancel, collect, nudge and number options, with a three row display and maximum payout of 20\$.

K.B. Only C.16 £6.95

ZODIAC This is an enthralling arcade adventure in which the evil powers of hell have scattered the signs of the Zodiac in the four hundred chambers of the abyss. Struggle to collect these signs and at the same time try to annihilate everything in your way. How long can you stay alive?

J.S. or K.B. C.16 £6.95

PETCH Race Petch around the screen, moving ice blocks to alter the maze, however, beware of the nasty monsters who are constantly chasing Petch as you attempt to collect the bonus cherries. Also if you can touch the edge of the maze the monsters will suddenly burst into flames, but look out they'll soon be back!

J.S. or K.B. C.16 £6.95

MOON BUGGY You must skillfully manoeuvre your jumping patrol vehicle over dangerous moon craters as well as large boulders and cunningly placed mines. Not only this but avoid the hovering alien spaceship as it bombards you from above.

J.S. or K.B. C.16 £6.95

3D TIME TREK As sole survivor of the planet "Corillian" your quest is one of anger and revenge. The starship you are flying is full of the latest inboard computers and extra powerful sensors. Also included are full 3D graphics, to add unbelievable realism to this fantastic journey through time itself, and beyond.

J.S. and K.B. C.16 £6.95

SKRAMBLE Earth has been overrun by the Cobrons and its up to you to battle through the six ferocious and testing sectors. Adversaries include meteors, UFO's and deadly fireballs. Fly through an armoured city, then an elaborate maze and finally the command base itself.

J.S. or K.B. C.16 £6.95

FLIGHT PATH Flight Path is without doubt the best flight simulator on the C/16 and Amstrad. The many elaborate features include; Altometer, flaps, directional headings, crosswinds, fires, ground warning lights and reverse thrust to name but a few. Also included are smooth graphics as you take off, cruise over mountains, and land once again.

J.S. and K.B. C.16 £6.95

OUT ON A LIMB This is a fantastic and in parts outrageously funny game. Based on the fairytale of Jack and the Beanstalk, Out On A Limb is full of the most strange and eccentric characters you are ever likely to meet. Firstly, climb the stalk and jump onto the clouds, then enter the giant's castle searching for treasures. However, watch out for vacuum cleaners, musical notes, televisions and potted plants, all of which chase you round the many and elaborate rooms of the castle. Once the treasure is collected the single exit will be opened, and then.....?

COMMODORE 64

**OXFORD
PASCAL**

YOUR FUTURE WITH COMPUTERS DEPENDS ON PASCAL

BECAUSE

- PASCAL is the world's most popular programming language after BASIC
- PASCAL is FAST up to 20 times the speed of BASIC

WHAT IS OXFORD PASCAL?

OXFORD PASCAL is a COMPLETE implementation of the popular programming language PASCAL running on the Commodore 64

GRAPHICS & SOUND

With the OXFORD extensions to PASCAL you can programme dazzling graphics and astounding sound

WHAT DO I GET?

With the cassette version of OXFORD PASCAL you get

- A powerful text editor for preparing PASCAL programs
- A resident compiler giving 14k of user RAM
- A powerful set of colour graphics and sound extensions to standard PASCAL

With the disk version of OXFORD PASCAL you get:

- All the above, PLUS
- A full disk to disk compiler exploiting the entire memory of the 64 for PASCAL programs.

HOW MUCH DOES OXFORD PASCAL COST?

Cassette version (resident compiler only) £19.95
 Full disk compiler (1541, 4040, 8050, 8250 drives) £49.95
 Prices are exclusive of VAT. There is also a small charge for post and packing.

 order. Price £8.95
 (overseas
 orders add £1)

For beginners, O-level and beyond, these best-selling programs are unique and highly successful aids to language learning. Each cassette provides a comprehensive series of vocabulary lessons and a variety of self-paced learning and test modes. All accents and special characters are clearly displayed and different colours denote masculine, feminine and neuter words to reinforce gender learning.

The create command enables new lessons in vocabulary or grammar to be entered, edited as required, then saved on tape. By using this simple yet vital feature, homework lists and exam revision can be retained indefinitely and recalled on demand.

Two cassettes are available for each language, covering thousands of words; Level A provides 16 lessons in general vocabulary; Level B provides a further 16 lessons including adjectives, adverbs and fully conjugated verb lists.

COULD IT EVER HAPPEN?

Part 1 — taking the first steps by Brian Grainger

Did you get a new Commodore computer for Christmas? Have you owned a computer for some time but use it only for playing games? Maybe you think it's time you started programming? This is the start of a four-part Basic tutorial for the absolute beginner, taking you gently through the basics of Basic. This month Brian Grainger shows you how to write a simple program to produce a message on the screen and some graphics. So let's get going . . .

Remember the day you opened the box of your brand new Commodore computer? You plugged it all together with your TV and turned it on. The first thing you probably did was to load a program from the cassette given or bought with the machine and ran it. This is the first time you have used a computer program.

It may have been the latest game, a drawing program or

something educational. Whatever it was, each of these different programs gets the computer to work in a different way. It is this that makes a computer such a useful thing.

In the past you bought a game, like Monopoly, played it a while, got tired of it and shoved it in the cupboard. There may be a typewriter in your home for writing letters

but it does nothing else but write letters. Your computer can do all these things. It's the program which allows you to choose what it does.

The purpose of this series is to teach you how to write your own programs and get your computer doing what you want, so it will never join the Monopoly in the cupboard.

What is a program?

What is a program? Let's consider a simple everyday function like watching the telly. You may not realise it but you're probably going through the following steps to do this simple task:

- look at the paper to see what's worth watching, and make a choice
- turn the television on
- select the right channel
- if the volume is too loud or too soft then change it
- watch the programme
- keep watching the programme until it is finished, or it's time for Dallas
- if you want to watch something else then go back to selecting the channel
- if you do not want to watch anything else then switch the television off.

The above is a set of instructions to tell you how to watch the television. I could just as easily have given another set of instructions to tell you how to get up out of bed and prepare yourself for school or work. In other words, you're following different sets of instructions for different tasks. Just like the computer.

A computer program is simply a set of instructions to tell the computer how to do a particular task. Like the example above, the instructions are performed in sequence

**"write your own
programs and get
your computer
doing what you
want"**

unless the result of answering a question, for example, means that we must jump to another point in the sequence.

The Basic language

Let's consider another point. If I gave the above instructions to a French person and told him to carry them out, he probably wouldn't know what to do because he did not understand English. So for him to understand I would have to write the instructions in French, a different language.

The same applies with computer programs. The instructions have to be written in a language the computer

understood by all Commodore computers.

The person who writes the program of instructions which the computer will understand and act upon is the programmer. Let's set about the task of writing programs so that you become a programmer straight away.

Programming starts here

Here is a simple one line program. Type it into your computer carefully. If you make a mistake use the 'DEL' key to delete what you typed and then type the correct letter.

```
PRINT "I AM A
COMMODORE
COMPUTER"
```

HELLO
I AM A COMMODORE
COMPUTER

But hold it, we could NOT type the following lines from the keyboard:

```
PRINT "HELLO"
PRINT "I AM A
COMMODORE
COMPUTER"
```

Try it and you can see why not. Each time the RETURN key is pressed the computer prints the words and then says READY. But we don't want READY to get between the two lines. We want the computer to remember the instructions that it is given and only carry them out when we tell it to. We need a way of storing the instructions without being obeyed and we

with the lowest. In this case it will obey line 10 and then line 20 so we will get:

```
HELLO
I AM A COMMODORE
COMPUTER
```

You may be wondering why I chose the numbers 10 and 20, rather than 1 and 2. Suppose we had written the above program and then we decided we wanted the computer to appear friendly. Suppose we want to ask for the name of the person who runs the program, BRIAN say, and then print HELLO BRIAN.

The INPUT command

First we want an instruction to ask the user to input his or her name and we want to do this

"First we want an instruction to ask the user to input his or her name . . ."

understands. When you turn on your Commodore computer the language it understands is called BASIC.

There is another point in common between the languages understood by people and those understood by computers. People from, say, London will speak the same English as people from Newcastle. But one will sometimes use 'slang' or dialect words that the other won't understand. The problem is that although the language is the same, the dialects are different! The same thing happens with Commodore computers. Although they all understand BASIC, there is a different dialect used by the Commodore 16 to that used by the Commodore 64. Certain words in Commodore 16 BASIC, such as HELP or PAINT, will not be understood by the Commodore 64. Throughout this series we shall only use the 'words'

When you are sure it is right press the 'RETURN' key. All lines of program are sent to the computer only when the 'RETURN' key is pressed. I won't mention this point every time. Just remember to press the 'RETURN' key after every line. You should see the following displayed on the screen.

```
I AM A COMMODORE
COMPUTER
```

READY

We can see that the computer has done what the line of program said. It has printed the words inside speech marks on to the screen. Having completed the program it then says READY to tell you that it is ready for your next instruction.

Now for a real program

Let's suppose we want to print on the screen the following:

do that by giving each instruction a line number, like this:

```
10 PRINT "HELLO"
20 PRINT "I AM A
COMMODORE
COMPUTER"
```

When the line is sent to the computer this time nothing happens. The flashing cursor comes back for you to type the next line. But the computer has remembered the lines, as you can see if you type LIST. That's another command you've learned, it lists all the lines of a Basic program you have stored in memory.

Here's another command: when we want the computer to obey the instructions that it has remembered, or stored in its memory to give the technical term, we tell the computer to run the program. Just type RUN. That makes the computer carry out the instructions in the order given by the line numbers, starting

before we print HELLO. By adding the following program line we can do this:

```
5 INPUT "WHAT IS YOUR
NAME";NAS
```

When this instruction is obeyed the computer will print on the screen the message 'WHAT IS YOUR NAME?' and the flashing cursor will wait for you to type it in. When you have typed it in (and pressed RETURN) the computer will store it in a 'box' which the computer has labelled NAS. It does this so we can refer to the contents of the 'box' at any time.

Because we have given the new line a number 5 it will be obeyed before line number 10 which is what we want. If the first line of the original program had been 1 we would not have been able to choose a lower number of the new line.

Now what we need to do is to revise the program so that the computer will print the

Superbase 96

THE COMPLETE INFORMATION STORAGE AND CONTROL SYSTEM, SUPERBASE 96 TRANSFORMS COMMODORE MODEL 8096 OR 8296 INTO A FULL-FEATURED, PROFESSIONAL DATABASE SYSTEM! WITH UP TO 1100 CHARACTERS PER RECORD ON UP TO 4 SCREENS... AND UP TO 128 ITEMS PER RECORD, DEFINABLE AS KEY, TEXT, NUMERIC, CONSTANT, RESULT OR DATE... IN FILES OF UP TO 16M CHARACTERS! WITH SPREADSHEET AND CALCULATOR CAPABILITY, CALENDAR FUNCTIONS, MULTIPLE CRITERIA SORT AND SEARCH, EASY INPUT FROM WORDPROCESSOR/DATA FILES, BOTH MENU-DRIVEN AND PROGRAM OPTIONS, BATCH AND TRANSACTION PROCESSING, FULLY DEFINABLE OUTPUTS... SUPERBASE 96 IS ESSENTIAL IF YOU WANT THE MOST FROM YOUR COMMODORE! SUPPLIED ON 8050/8250 DISK, WITH EXCELLENT TUTORIAL/REFERENCE MANUAL. **OUR PRICE £454.75 £375.00!**

Superscript II

SUPERSCRIPT II HAS ALL THE FEATURES YOU EXPECT FROM A PROFESSIONAL WORDPROCESSOR SYSTEM... AND THEN MORE! UNRIVALLED 240-COLUMN TEXT HANDLING, VARIABLE WIDTH SCREEN, FOUR-WAY SCROLLING OVER 2100 LINES, DOCUMENT LINKING FOR UNLIMITED CAPACITY, GLOBAL SEARCH AND REPLACE, FULL MEMORY CALCULATOR, ROW AND COLUMN ARITHMETIC, BACKGROUND PRINTING AND COMPLETE LETTER-QUALITY PRINT CONTROL MAKE SUPERSCRIPT THE ULTIMATE WORDPROCESSOR FOR THE CBM 8096/8296... AND IT SPELLS TOO! SUPPLIED ON 8050/8250 DISK. **OUR PRICE £454.75 £375.00!**

Master

THE COMPLETE PROGRAM DEVELOPMENT PACKAGE FOR THE COMMODORE 8096/8296, USED BY BOTH NOVICE AND PROFESSIONAL PROGRAMMERS. MASTER ADDS 85 NEW COMMANDS TO BASIC INCLUDING 72K MEMORY MANAGEMENT, PROGRAMMER'S TOOLKIT, BUSINESS BASIC, KEYED DISK ACCESS, MULTIPLE SCREENS WITH USER-DEFINABLE INPUT ZONES, REPORT GENERATOR, 22-PLACE ARITHMETIC, DISK DATA COMPRESSION, DATE CONTROL, SCREEN PLOT, SCREEN DUMP, AND MORE... EVERYTHING YOU NEED FOR PROGRAMMING TO TOP PROFESSIONAL STANDARDS! WITH COMPREHENSIVE INDEXED USER MANUAL, QUICK REFERENCE CARD AND DEMOS. **OUR PRICE £339.25 £225.00!**

POWERFUL UTILITIES FOR YOUR "64"

THE BEST RANGE OF UTILITIES FOR THE 64. WRITTEN BY PROFESSIONALS—SOLD BY PROFESSIONALS

Two important NEW programs

QUICKDISC Incorporating Menu Maker

Speed up your 1541 disc drive with this new program. Loads most programs at more than double the normal speed. A flexible package that allows you to incorporate a menu and fast loading on your own discs. Also includes a file exchanger for programs put on disc with "Disco" (THE tape to disc utility), another way of making fast load disc programs. A must for all disc drive users.

ONLY £11.95

DOUBLER Tape Back Up Device

Includes hardware and software. This amazing new cassette port adaptor allows you to make back up copies of "turbo" software. Tests have proved 100% successful. Requires access to two cassette decks. The special software generates a brand new machine copy onto one deck while loading from the other. Fast and reliable, they said it couldn't be done.

ONLY £12.95

DISC DISSECTOR

At last a really powerful disc copier and utility program. Incorporates a range of powerful programs. Includes "Fastcopy" takes just four minutes to read and write a whole disc "Error copy" automatically reads and writes all error types, now you can make a security back up of those expensive business programs. "Quickdisc" more than halves disc loading time, very useful "File copier" allows selective copying from directory "Track & Sector" a slower but very thorough program. Also includes the following useful utilities, Menu maker, Index, Retitle, Rename, Scratcher, Disc to Tape and Tidy. If you have a 1541 you must have Disc Dissector. Supplied on disc with full instructions.

ONLY £29.95

COMMODORE CONNEXION

Connect any "Centronics" type printer to your '64. Price includes lead and software on cassette with special disc conversion program.

Simple to use and very reasonably priced.

ONLY £14.95

FASTBACK Fast Load Utility

Convert your slow loading software to high speed load with Fastback. The most sophisticated program of its type allows you to produce "turbo" loading versions of most single and multipart software that load independently of Fastback. Simple to use no programming skill needed. Example Load "The Hobbit" or "Manic Miner" in 150 secs. Tried and trusted (over 2000 sold).

A very professional program.

ONLY £9.95

DISCO

THE TAPE TO DISC UTILITY. We guarantee that this is the best tape to disc utility on the market. Very easy to use no programming knowledge needed. Automatically handles device numbers and multi part programs. Programs auto load and run once transferred and can also be made to fastload with Quickdisc. Handy for making your own disc programs auto run.

ONLY £9.95

ROCKET

Fed up waiting for programs to load and save? Rocket is a utility for the programmer, speeds up loading and saving by about 8 times while still allowing for normal speed operations. Does not affect the speed of BASIC as no wedge is used. Programs can also be saved with high speed system to reload independently. A must for serious programmers who have no disc drive.

ONLY £7.95

BIGMOUTH

The superb new speech synthesis program for the '64. Uses "speak" as a basic command. Very easy to use. Can be incorporated into your basic programs. Words are entered in phonetic English, ie. spelled as they sound. Therefore vocabulary is unlimited. Great fun and good for educational purposes.

ONLY £7.95

TAPER

A powerful utility. Works with almost all normal speed software.

ONLY £5.95

3M SCOTCH
DISCS
S.S.D.D.

£16.00

LIFETIME
GUARANTEE
BOX OF TEN

DATA RECORDER
A dedicated data recorder designed for use on the CBM 64 or Vic-20. Specification as C2N but with pause button. Model available for the PLUS4 or 16 at same price.

SATISFACTION GUARANTEED.
ONLY £29.95

HUGE RANGE OF SOFTWARE & BOOKS FOR BBC, ELECTRON, SPECTRUM, COMMODORE 64, VIC 20, ORIC, DRAGON, MEMOTECH & ZX 81

Forth

The Forth Dimension: Programming with a DIY Language

Part five — take a piece of string ...

by Richard G Hunt

Handling numbers is important. The only aspect not so far covered in this series is input via the keyboard. This and string handling (including the input counterpart) is the subject of this article.

String handling is a little tenuous in Forth. Some would say non-existent. This does not mean that Forth is defective, merely that, for example, string variables as in Basic are not required. Forth relies on the ASCII table, which of course is numeric. So to output a character string the word **EMIT** is used which requires the appropriate ASCII value as a parameter on the stack:

```
>89 EMIT < Y OK
(Remember DUMP which had the word ASCII defined using EMIT in a loop?)
```

Programmed text may be output using [.] (dot quote):

```
>." Here is some text"
<RETURN> HERE IS
SOME TEXT OK
```

The final quote mark is not a Forth word but a delimiter to the text. Note also the mandatory space between [.] and the text.

With both **EMIT** and [.] most string output routines can be handled. Input is a little different. The building blocks exist in Forth but there is usually no pre-defined word to get input from the keyboard. So we must define a word like **INPUT\$** ourselves. Fortunately this has been done before and as I decline to re-invent the wheel, or **INPUT\$** I have drawn on several sources to provide this working definition, and it seems to me a reasonable consensus:

```
VARIABLE STR# 78 ALLOT
: INPUT$ STR# 80 32 FILL ." >"
      QUERY 1 WORD HERE COUNT
      STR# SWAP CMOVE ;
```

There are lots of new words and quite a lot else to explain here. First I should stress that

this definition uses **FIG-Forth**, and that other implementations, even perhaps of **FIG-Forth**, may differ in some detail. Do check your system documentation regarding **WORD**. On Forth-79 the variable expression may be exchanged for **>CREATE STR\$ 80 ALLOT <** which has a similar effect. The definition of **VARIABLE** does indeed use **CREATE** to allocate dictionary space for the entry to follow, which consists of a cell (two bytes). **ALLOT** turns **STR\$** into an array of the specified number of bytes (here 80 in all as **VARIABLE** already has allotted two bytes). **CREATE** requires the full number of bytes to be allotted. So far then, we have made a space in the dictionary for an array of 80 bytes, which should be long enough for most purposes.

Next **FILL** ensures that the array is cleared by filling it with blanks (ASCII 32) — **STR\$** leaves its address on the stack which followed by the count and character code is acted on by **FILL**. A prompt (>) is displayed. **QUERY** accepts a line of input up to the end of the line or a carriage return, and places the string in a temporary area whose address is indicated by **WORD HERE**.

The number 1 is a "null" delimiter required by **WORD**. It may be changed to 32, say, which will cut the string off at the first space. **COUNT** organises the address of **STR\$** on the stack and finally **CMOVE** removes it character by character to the address (and reserved area) left by **STR\$\$**. This part is necessary because **HERE** changes all the time and without moving

the string to a safeplace it would be corrupted.

Stringing out

Having input the string we need to output it again — like this:

```
: OUTPUT$ STR$ 80 —
  TRAILING TYPE ;
```

[—**TRAILING**] causes trailing spaces to be omitted from the string output by **TYPE**. If you are in any doubt as to whether **INPUT\$** works use **DUMP** to examine **STR\$** in memory. First input a string to **INPUT\$**, then enter: **>STR\$ 'U. <**

The system will indicate an address, for example, **7101 OK**. Now enter, say: **>7090 7130 DUMP <** and the ASCII display will show the individual letters of the string following the Name Field Parameter (NFP) of **STR\$**.

KEY is most often used to get a single character from the keyboard. For example the common Basic routine:

```
500 GET A$: IF A$ = " "
  THEN 500
510 IF A$ = "Y" THEN ...
becomes in Forth
: GETA$ BEGIN KEY 89 =
UNTIL ;
```

which suspends execution until the key with ASCII value 89 is depressed. Obviously any value may be substituted, my favourite being 32 (space). A page routine may look like this:

```
: GET$ . "Press SPACE to
continue" BEGIN KEY 32 =
UNTIL 147 EMIT ;
```

So much for strings. You cannot imagine how they tied me up in knots.

Numeric input

Numeric input requires the definition of a special word like **INPUT\$**. Some systems

may support a word like **#IN**, otherwise you can define it in much the same way as for string input:

```
: INPUT 00 CR. ">" QUERY
1 WORD (NUMBER) DROP
DROP ;
```

INPUT uses (NUMBER) or **CONVERT** on some systems to ensure that a number is left on the stack. The rest of it is as before except that it is not necessary to move the input as the stack is as safe as anywhere.

Input of a number is often associated with choice within a legal range of numbers. Forth makes this easy with **MAX** and **MIN** both of which require on the stack the number to be checked (n1) and the legal limit (n2). **MAX** returns the greater and **MIN** the lesser, so in backwards Forth style the upper limit is checked against **MIN**. For example:

```
: LEVEL INPUT 10 MIN 1
MAX ;
```

which allows input of any number but will pass on for further processing only a number between 1 and 10.

Now for a simple exercise. Last year one of my daughters was having trouble with multiplication tables. I thought to try to help by writing a Forth word **TABLE** that performs the following procedures:

- defines and resets a variable **CHOICE**
- gets input of a number and stores it in **CHOICE**
- clears the screen, prompts for input and displays the "n times table" formatted neatly in columns (using 'R' or 'D.R' and [.]).

Try to Do It Yourself, but remember to keep it simple. My solution next time.

'Another winner in The Hobbit class. It's a complex real time adventure which will keep devotees puzzled for hours.' *DAILY EXPRESS*

'Sophisticated, rich in atmosphere and amazingly detailed, Sherlock is a game which no Spectrum owner will want to be without.' *MICRO ADVENTURER*

'Sherlock is a long way ahead of the rest of the competition.' *PERSONAL COMPUTER NEWS*

'In Sherlock you can not only talk to other characters, of whom there are at least thirteen, and ask them to do things for you, but you can also interrogate them and even discuss the case.' *SINCLAIR USER*

Sherlock Holmes has been well worth waiting for with an 800 word vocabulary, real Victorian transport system - cabs and trains and all, and a cast of characters, peopling screens of graphics designed by Mugsy man Russell Comte.'

YOUR COMPUTER

'An intriguing and absorbing game.'

COMPUTER AND VIDEO GAMES

'I have been totally enthralled with this new brilliant adventure. I thought The Hobbit was good, but the added vocabulary and the even more intelligent characters, makes Sherlock number one in my software collection.'

MR. ROGERS, BATH

'Sherlock must be the most complex adventure ever created.'

The creation of atmosphere is superb (more like that of a novel, than a computer game) in fact playing the adventure feels more like acting than playing a computer adventure.

The characters in Sherlock behave just as they would in real life and have a very human feel to them, not only in the way they react to situations, but also in their displaying of human emotions.'

MR. STERN, HERTS.

'Rich mental imagery.'

CRASH

'Sherlock is an adventure which has yet to be beaten.'

YOUR SPECTRUM

'Sherlock is a superb program and will provide many hours (hours? months more likely) of stimulating entertainment.'

PERSONAL COMPUTER NEWS

'Sherlock is an excellent adventure bursting with atmosphere, challenge and inventiveness.'

PC GAMES

'Sherlock the adventure is about as devious as Sherlock Holmes the master sleuth.'

50 Designer's Pencils To Win

Putting graphics up on screen can be a tricky job for the non-professional programmer. To make it slightly easier a number of graphics software packages have been launched recently. One of the best of these is Activision's excellent Designer's Pencil. We have fifty copies of the Pencil — worth £9.95 each — to give away in our simple-to-enter competition.

The Designer's Pencil is Activision's first foray into utility programming and — if the quality of the graphics tool is maintained the future looks good for 64 owners.

Activision established themselves two years ago as the leading American video games company — writing games for the Atari VCS.

Their conversion to the computer has been about the only successful transition that a leading video games company has made. All the others have gone bust or faded into obscurity.

Games like Pitfall I and II, Decathlon, Zenji, and Ghostbusters have kept Activision in the top five of computer games companies in the world. Much of this knowledge has been incorporated in the Designer's Pencil.

The Pencil uses a programming language called PROG. Options are chosen from a menu with the joystick. It's all simple to

use and easy to understand. Unlike standard drawing programs the Pencil also includes the option to use sound functions of the 64.

As well as choosing options with your fire button you can also use the joystick to draw free-hand directly on to the screen. The Pencil shows you all the programming that is required to create a graphic as you draw it through a window on the screen.

Winning a copy of the Pencil is as easy as using the Pencil itself. All you have to do is complete your general knowledge quiz on designers and send it off without delay to **Commodore User, Priory Court, 30-32 Farringdon Lane, London EC1R 3AU. Entries by 15th February please.**

QUESTIONS

- 1 Ghostbusters the computer game was designed by
 - (a) David Crane
 - (b) Ray Parker Junior
 - (c) Ferdinand De Lesseps
- 2 Princess Diana's wedding dress was designed by
 - (a) Hardy Amiss
 - (b) David and Elizabeth Emmanuel
 - (c) Jasper Conran
- 3 CAD stands for
 - (a) Computers Against Disarmament
 - (b) Can Anyone here Dance
 - (c) Computer Aided Design

The competition is not open to employees of EMAP Business and Computer Publications. Entries should reach this office by no later than 15th February 1985. The editor's decision is final and no correspondence will be entered into.

From Paintpots To Pixels

To get the most out of the graphics capabilities of your Commodore 64, you'll need to buy some graphics software, and there's a lot of it around. Generally, products fall into three categories: graphics editors that let you design characters and sprites, extended Basic packages that specialise in graphics commands, finally there's fully-fledged hi-res drawing packages. Dermot Williams has sampled a few products — and has drawn some conclusions.

Main picture shows one of the pictures you'll find on Doodle's demo program, so good they put it on the package's front cover.

Sports car, sailing boat and steam engine, courtesy of Activision's Designer's Pencil. The fourth illustration shows a multicolour sprite being created on Super-soft's Graphics Designer package.

Graphics Editors

Romik Graphics Editor

Graphics Editor is available currently only on tape, and it costs £14.99. Plans to release it on disk are still in their early stages. As its title suggests, the program allows you to design your own graphics in three main areas: characters, sprites and screens. The program runs automatically after loading and displays a menu of the three above options.

So let's start with defining characters. The character being edited is displayed both on an 8 by 8 grid as well as in normal size. The complete character set is also displayed at the bottom of the screen for reference. In addition, groups of characters can be viewed together in a 'viewing window'.

To edit the character you must use the keyboard to position the graphics cursor around the grid, turning pixels either on or off. The program also provides commands for working on the character as a whole. So you could clear it, invert or flip it round both the horizontal and vertical axes — even scroll it vertically or horizontally.

The 'M' command gets you into multicolour mode. However, the grid doesn't operate in multicolour; the character on the screen is still 8 by 8 so to choose the colour of a multicolour pixel, you must edit two bits.

That leads us on to sprite design which uses the same general method. The sprite is displayed on a large grid, as well as in its four normal sizes. A display window allows four sprites to be viewed together.

Generally, you get the same editing and manipulating commands as for the character editor, but there is one extra and useful feature. You can display a series of sprites in the display window, making it easier to design animated sprite sequences.

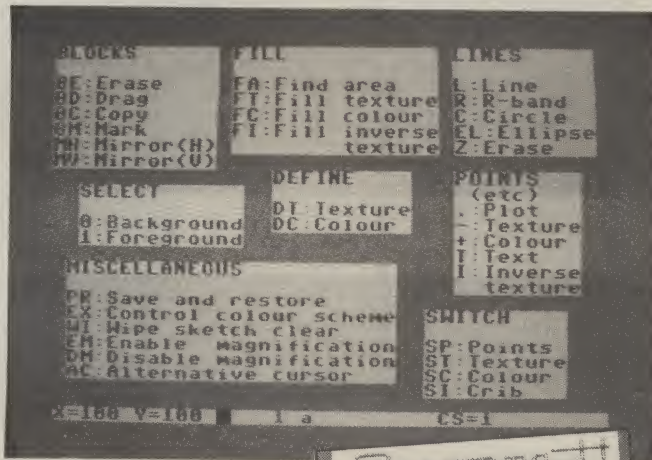

Lastly, the screen editor

allows screens of user defined characters to be composed. A portion of the screen may be defined as a 'block' to be moved, scrolled, and inverted just like sprites and characters.

Having designed your character, sprite or screen, you'll want to include them in your programming. Each section in the *Graphics Editor* allows the user to save his or her work on to tape or disk. The manual, which is clear and easy to follow, includes a short routine for loading those files for inclusion into your own Basic programs.

To design shapes of more than one character, you can define a window of up to 32 characters. This is displayed to the left of the grid, the next character in the window being automatically brought on to the grid, allowing you to work on the whole window easily. Commands such as rotate and flip may be applied either to the whole window or only the current character being edited.

Graphics Designer also features a multicolour mode. Here, the cursor doubles in size, and at the side of the screen are displayed the three

The first screen you see when you load Talent's *Panorama (H)* is the main menu, showing its extensive range of one and two letter commands.

Supersoft Graphics Designer

This package is a little cheaper than Romik's, selling at £9.95 for the tape version and £11.95 on disk. *Graphics Designer* has two options, allowing you to design your own characters and sprites.

Let's start with the character editor, which displays a large designing grid as well as the whole character set. To work on the grid you can use either the keyboard or a joystick. Like the Romik package, there's a wealth of commands to manipulate the character in various ways: you can clear it, flip it around either axis, invert, scroll and rotate around 90 degrees.

selected colours, and a pointer that indicates the colour the cursor is currently using. So there's no bit twiddling to do — it's very easy to use.

On to sprite design: here the grid is larger and the current sprite (like the Romik package) is displayed in each of its four possible sizes. The sprite is designed and edited on the grid using the keyboard or joystick.

Funnily enough, load and save commands have been named OLD and KEEP. They'll allow you to use either

tape or disk. The manual included has a neat little program for transferring your work from memory into Basic DATA statements so you can incorporate your designs into your programming work.

Finally, which one should you choose? If you don't really want or need the screen editor in Romik's *Graphics Editor*, Supersoft's package is generally easier to use and a little more versatile for sprites and characters — it's cheaper too.

Basic Commands For Graphics

Zipprint Graphix IV

There are plenty of packages around that extend the Basic commands available to your Commodore 64. Most of them, though, give a range of commands that cover graphics and a whole lot of other facilities. *Graphics IV* is one of the few programs available that specialises in graphics, adding 19 extra commands to Basic. It comes on cassette only and costs £9.99.

Eight of those commands are dedicated to hi-res graphics. The HGR command selects hi-res mode, giving the option of a four-line text window at the bottom of the screen. HCLS clears the hi-res screen, and COLOUR, MOVE, DRAW and PLOT allow points and lines to be drawn. PAINT covers areas with colour and PUT allows text to be incorporated on the hi-res screen.

When the package is loaded, it automatically copies the character set into RAM so the user can easily define them. In fact, the CHARACTER command is provided for that purpose. CMODE selects which character (upper case/graphics or lower/upper case) your commands are operating on.

Other commands are BORDER and BACKGROUND for defining the

Graphic packages for the 64

From Paintpots To Pixels

colour of the aforementioned, CURSOR for moving the text cursor to any x,y position on the screen, and BLANK/UN-BLANK for inhibiting the Vic chip. This is what happens when the screen blanks during a cassette or disk operation and is useful if you want to use hardware which has timing problems with the 64 — such as the old Vic 1540 disk drive.

Unfortunately, for a utility devoting itself entirely to extending the 64's Basic for graphics purposes, Graphix IV doesn't really have enough commands. The ones it does have are fast and easy to use, but a complete Basic extension, like BC Basic at £19.95 on tape, may be a better buy — it offers the same and a whole lot more.

HesWare Graphics Basic

This is a much meatier package incorporating 100 additional English language commands to Basic. Unfortunately, it is available only on disk and costs a mighty £27.95. Although the package describes itself as being dedicated to graphics, it offers not only commands for creating hi-res graphics and sprites, but for animating sprites and producing synchronised sounds.

The package operates in three screen modes: text, hi-res and multicolour. Text mode lets you list and edit programs, and hi-res and multicolour allow graphics to be displayed and programs run. Modes can be switched simply by typing the appropriate command. Function keys are also implemented for quick use of commands like Run, List and Dir.

The Border and Background commands let you change colours, whilst Line draws a line from two specified points in the x,y to x,y format. The same goes for Circle, which produces circular shapes and arcs. You specify the x,y coordinate of the centre and use the XYSIZE command to specify horizontal or vertical radii. FILL lets

you fill any enclosed area with colour, specifying both the colour and the mode in the program line. It's also possible to print text on a graphics screen using GPrint.

On to sprites, which can be created and moved. The sprite editor has a 24 by 21 dot grid on which pixels can be turned on and off — the actual size of the pixel is also displayed. Sprite shapes are included on the disk. There's also a useful example to show you how to incorporate your creations into a program and how to move them around.

That takes us to creating sounds: you can turn on and off automated sounds, choosing any of the three voices and setting the ADSR envelope. Also included are commands for selecting the possible waveforms and for setting the volume. Lastly, you can print a hi-res or multicolour image to a Commodore printer or a Gemini series printer.

The package comes complete with a 120 page manual that not only comprehensively lists, describes and gives examples for each command, but also provides a useful tutorial section at the beginning. Graphics Basic is expensive but it gives you much more than commands for creating graphics.

High-Resolution Graphics

Panorama from Talent

Panorama is a hi-res graphics package that comes on tape (£17.99) and on disk (£19.99). On loading, the screen displays the 34 available commands. Any command is operated by typing its one or two-letter mnemonic. For example, 'L' draws a line and 'EL' would draw an ellipse. There's a status line display at the bottom of the screen call-

Graphics BASIC™

An Enhanced BASIC

By Ron Gilbert and Tom McFarlane
Unlock the full potential of your computer with over 100 additional English-language commands. Now beginning programmers can create complex graphics, animation, and music without being a machine language programming expert.

Create Sprites

Hi-Res Graphics

Animation

Synchr

rectangular or irregular blocks can be defined, which may then be textured, coloured, mirrored, erased, copied and moved.

The memory retains four different colour schemes so you can experiment easily with colour. The EX command selects which colour scheme to use to display the pictures on screen. The picture may be magnified to make editing fine detail easier. Complete masterpieces may be saved to tape or disk and also verified, merged and loaded.

Generally, the system of using mnemonics to operate the commands in Panorama take a long while to get used to, but with a little practice you can work quite quickly. One sore point is that after each command has been entered, the computer gives either a 'pip' to indicate it was correctly entered or a wail if it was wrong. Audio feedback is a good way of highlighting errors but the constant 'pips' will have you reaching for the volume control — so you can't hear the mistakes either.

Doodle from Quicksilva

Quicksilva is now marketing this American product in Britain at £14.95, around half the US price. Unfortunately, it's available only on disk.

After loading the package you get a 'greeting' screen followed by the main menu. This lists the ten modes in which *Doodle* can operate — Sketch, Line, Boxes, Circles, Colour, Zoom, Copy, Stamp, Letter, Disk and Print. You can change mode at any time using the function keys and instead of the main menu, the respective mode menu is displayed. Return toggles you between the menu and drawing screen.

Each mode menu lists the commands available in that mode, in an uncluttered and colourful way. For example, in Sketch mode, you can move the cursor at nine different speeds and nine different sizes. You can fill areas with colour, invert the screen, flip the screen around the

ed the 'crib' which displays among other things, the current x,y position of the cursor. In fact, you have a choice of three different types of cursor: an arrow, a gunsight or nothing at all.

The spacebar toggles the display between the menu screen and the picture you're working on. You can use either the keyboard or a joystick to move around the screen one pixel at a time, and the function keys can be used to move the cursor in eight-pixel jumps.

As well as drawing individual points, *Panorama* will draw and erase lines, circles and ellipses. An 8 by 8 'texture block' can be defined (much the same as on an Apple Macintosh) and used to add texture to your drawings. Used with a little practice and imagination, this can become a powerful command. either

SPECTRUM SIMULATOR FOR THE COMMODORE-64

If you have a Commodore-64 microcomputer, this brilliant program will allow you to use virtually any Spectrum BASIC programs without modification!

Just think of it! — your programs will think you really have a Spectrum! Because your 64 has a proper keyboard plus RS232, disk-handling, and serial port facilities, we are throwing in a lot of the features of ZX-Interface-1 as well.

Only £14.95 with manual in turbo-tape format

SOFTCHIP-64

Plug in cartridge with extra commands.
Our three standard cartridges are :

Programmer's Friend: append, auto, backup, catalog, collect, concat, copy, cursor, dclose, delete, derror, directory, dload, dopen, dsave, dump, func, header, help, kill, lines, merge, mon, record, rename, renu, replace, rescue, scratch, shrink, timeout, trace, user, var. ... the ideal 'toolkit' to make writing and debugging programs quicker and easier... also includes disk commands.

Business Commands: append, backup, blank, catalog, cend, cif, collect, concat, copy, cursor, datin, dclose, derror, directory, dload, dopen, dread, dsave, elif, else, error, genin, header, lwind, numin, pad\$, pctrl, per, pop, record, rename, rout, scan, scopy, scratch, sort, spc\$, swap, swind, print, print , on. ... all the features to make writing business programs a darn sight simpler... stop wasting time!...

Graphics Pack: bank, blood, break, bsave, cend, chargen, chinkle, cif, clear, col\$, dec, design, dot, draw, elif, else, erase, filter, hex\$, hibase, hitback, hitspr, ink, kill, lines, lsprite, lwind, membot, memtop, mode, move, per, plot, pop, push, reset, rout, scroll, split, sprite, ssprite, stick, swind, voice, volume, wpeak, wpoke. ... for high resolution graphics and sound... includes also structured BASIC language...

Each of these standard cartridges is only £29.95 including a full manual.

We also specialise in cartridges custom-made to your specification for only £34.95 — just ask for our special leaflet containing details of over 100 new commands and facilities. Get a cartridge custom-made for your precise needs — we guarantee the software will work beautifully so order with confidence from the experts.

From Paintpots To Pixels

vertical axis and save the whole screen to memory for later recall. You can even superimpose a grid on to the screen to help you plan your drawings.

Line, Box and Circle modes are similarly laden with easy-to-use commands, with as many functions as possible accomplished by the joystick. Colour mode selects the fore and background colours for working in, and sets colour cells for these colours. Zoom allows you to zoom in on any part of the screen making single pixel editing much easier.

Stamp lets you create 'rubber stamps' of small sections of your drawing which you can stamp anywhere on the screen. Copy lets you copy larger areas which have been defined in Box mode. The area can be saved to memory, be enlarged or rotated.

Finally, Disk and Print mode loads and saves to disk, and prints your masterpiece — not only on a Commodore printer but other popular models like *Epson*, *Okidata* and *Star*, providing you have a Centronics interface adaptor.

In conclusion *Doodle* is not only easy to use, it's great fun as well. The manual is clear and concise and the mode screens informative. It really is child's play to use.

Activision's Designer's Pencil

The Designer's Pencil package refuses to fall into any strict graphics category because it throws aside Basic in favour of a programming 'technique' it calls PROG, in which you string together sequences of commands. The package costs £11.99 on tape and £19.99 on disk.

On loading the program, you're confronted by the Programming Screen, a screenful of commands divided into four sections: master commands, programming area, instruction set and prompt window. Moving around is done by either keyboard or joystick.

The master commands let you do routine jobs like running the program you've built,

inserting lines into the program, deleting, clearing the screen and filing your work. The Prompt Window helps here and it gives you access to twelve demo programs.

That takes us to the Instruction Window from which you choose various drawing commands, like: Go Up, Down, Left, Right, Circle, Kaleidoscope on/off, Pencil on/off etc. There are also commands for changing background and drawing colour, setting the drawing speed, moving forwards, backwards, rotating, drawing diagonals, producing sound and music.

You use the joystick to scroll through the commands vertically, positioning the 'arrow' cursor by the one you want. The same goes for the program lines on the left side of the screen. To create a circle, for example, you'd use the Circle command, which entails specifying the radius, the format being 'CIRCLES = 112'.

With all the draw commands, you can specify variables 'A-Z' instead of figures. As in Basic, instead of just using one value, your variable can have different values throughout the program. You can set up program loops, and there's a Jump command that works in the same way as a Goto in Basic. That gives you the provision for animating parts or even the whole drawing.

Finally, it is possible to print your creations and program listings on a Commodore 1526 or MPS 801 printer. If you're lucky enough to have an Okidata Okimate 10 colour printer, you could use that too.

It's clear that *The Designer's Pencil* is a very sophisticated package; just looking at the Demo screens with the 'pencil' whizzing around furiously is enough to inspire enthusiasm. But this is no 'pick up your joystick and draw' program, it involves actual programming and the commands used are initially just as daunting for the beginner as Basic itself. The trade-off is that this package will provide facilities for even the most hardened enthusiast.

The Complete Machine Code Tutor

SPECTRUM 48K · COMMODORE 64 · BBC MODEL B · 32K ATARI

Trust New Generation to strip the mystery away from Machine Code. Now the Complete Machine Code Tutor makes learning machine code simple so there's never been a better time to discover the really great benefits of machine code programming — see what the press says:

“A colourful, clear, interactive computer teaching package — the best I've come across in any field.”
Jan Watterson — **Popular Computing Weekly**

“This pair of tapes forms a worthy addition to the range, giving a thorough exposition from the most elementary level of machine code programming on the BBC Micro.”

Which Micro & Software Review

“The best machine code tutor and no serious Spectrum programmer should learn machine code without it.”

Crash

“By far the best attempt comes from New Generation Software who has recently issued its Complete Machine Code Tutor for the BBC and the Spectrum.”

Popular Computing Weekly

“New Generation have got a very nice product here. It's well thought out, easy to use, aesthetically pleasing, and (as far as I could tell) bug-free and crash-proof!”

...“Overall then, an excellent idea, well executed.”

Computing Today

Supplied with full notes, this package teaches machine code the way it should be taught — at your own pace and actually from the microcomputer, not from a book. You learn programming the professional way, plus a few tricks of the trade. Available from all good computer stores at £14.95.

TWO SPECIAL CARTRIDGES FOR THE 64

We've commissioned two special add-ons for the 64 from Whitby Computers, another company whose products we reviewed and liked. Just look at what you get:

The Commodore User Toolkit Cartridge
... for easier programs
AUTO automatic line numbering
DELETES deletes specified lines
FIND lists all lines containing specified string
LINES calculates number of lines in your program
MERGE merges program from disk or tape
RENU renumber program
DUMP lists names and current values
VAR lists variable names
DESIGN multi-colour sprite editor
SPRITE sets position, colour, mode
HITBACK detects sprite hitting background
HITSPR detects sprite hitting another sprite
MON Pet-type machine code monitor
USER add new commands
FUNC defines function keys
SHRINK removes REMs and all unnecessary spaces
CURSOR puts the cursor at specified position
... and much more

PRICE: £27.50

SPECIAL BARGAIN OFFER:
order the two at the same time and
save a fiver - £50 for the pair!

David's Basic
... for better programs
AVG averages elements in an array
MIN finds the smallest number in an array
MAX finds the largest
PADS fills out a string with spaces
SEARCH searches array for given string
SORT sorts arrays
CHINKLE rings a bell
ERROR intercepts program errors
CIF conditional IF
CEND conditional END
ELIF Else If
ELSE Else
POP removes last subroutine from stack
PUSH puts a subroutine return address on to stack
EXEC a bit like PROC or labelled subroutines
ON used as ON-key GOTO or GOSUB
SWAP loads another program, retaining all variables
CLOCK continuously displays the time at stated position
COLS simplifies use of 15 colours
LWIND loads a ready-to-go screen display
DISP displays centered message
DATES turns a numeric date into a string
DATIN foolproof date input routine
GENIN foolproof input routine
NUMIN foolproof numerical input
PRINT% justifies columns of money figures
PRINT# adds true printer tabs
SCOPY screen copy
... and 18 other commands
PRICE: £27.50

CYBERGRAM DESIGN YOUR OWN VIC SCREENS

Brilliant idea, though it's simple really; the Cybergram Designs Vic-20 Graphics Aid Pack is a set of overlays and printed sheets on which you can immediately see the POKE locations you need for display and colour; and you can use successive sheets to set up a specific 'storyboard' from which to organise and visualise the sequences in a graphics program.
Your pack includes planner sheets for the standard 22 x 23 screen and plotter sheets for the 1023 x 1023 hi-res graphics using the Super Expander; you also get a set of handy character designer sheets that simplify the construction of your own shapes.

Very neat, very clever - and really useful too ... and at a discount from the normal RRP of £4.50.

Normal Price £4.50
OUR PRICE £4.20

Spectrum Emulator

Whitby Computers' amazing tape makes the Commodore 64 think it's a Spectrum 48K, bit of a downgrade? True, but now you can enter Spectrum basic programs and magazine listings. Includes manual on how to program in Spectrum basic.

Available on tape at: £14.95

KEEP IT CLEAN

Keep your cassette and computer clean with matching black covers - effective, efficient.

Sticky keytops? Things falling past the keys into the computer or the tape heads? Don't take the chance. When you're not using your Vic or 64, slip over one of our tailored Commodore User dustcovers - a smart black number featuring the magazine's logo on top. They do keep out dust, but they'll also cope with coffee splashes (anything less than a thunderstorm in fact!), paperclips, cigarette ash, the residue of longhaired cats, and the general detritus of daily life.

KEEP IT CLEAN

COMPUTER COVERS £2.50
CASSETTE COVERS £2.00
DISK DRIVE COVERS £3.00

To take advantage of these offers just fill in the order form on the back page.

WEAR YOUR MAG!

Commodore User tee-shirts and sweatshirts are in good-quality cotton, ideal for late nights in front of the computer or the beach at Torremolinas or the lounge bar at the Pig and Whistle.

Cobalt blue, with the magazine's logo big and bold across the chest. State size when ordering: we have small, medium, large and extra large.

Sweatshirts £7.75
Tee shirts £3.75

OSIRISAN Assembler/Disassembler

A major update and enhancement of the well reviewed (June 84) Freditor Osiris assembler from Elmhurst Enterprise. A symbolic disassembler has been added which allows synthesis of your own program source which you can then view, alter and reassemble. Disk users will additionally now get the powerful version 3 editor.

Tape: £17.95
Disk: £22.95

Instant database for your 64

INFOTAPE

Why buy lots of different data storage systems when just one will do? INFOTAPE 64 is a powerful yet easy to use database system for tape users, and stores up to 3,000 data items with you defining the number of fields per record. Totally flexible; and interpretive in nature, with the user having the command of what data is stored and how. And file characteristics may be changed after the file has been created. Powerful 19-function calculator is built-in (giving spreadsheet capability); batch processor can update or delete all or selected records. A full report generator is included to provide anything from a gummed label for a mail shot to tabular reports...

Normal price: £16.95
OUR PRICE: £9.95

Special Offer: When you upgrade your system to use a disk drive, INFODISK will be able to retrieve your tape records - and your INFOTAPE order from us comes with a £20 off voucher against the disk version!

BINDERS - £2.99

FALLING APART?

Our Commodore User binder holds 12 issues of the original-size magazine (and Vic Computing fits too!) Dark blue with the magazine's name in gold; smart, sturdy and sensible - the mags are held in by strong elastic grips, easier and neater than the other kind of binder that has metal rods for the purpose.

SIMPLY WRITE

Simple, low-cost word processing for Vic or 64

You won't find a better word processor at the price - has all the functions you'd ask for from a £200 package, and it's friendly and easy to use too.

Disk or tape at only £34.95

STACK FOR THE 64

Zap-proof joystick £7.95

Stack claims this joystick is "almost" unbreakable: we'll vouch for that. Non-slip rubber sucker feet, two fire buttons, shaped grip.

Four-slot Switchable Motherboard for the 64

Instant expansion for the 64. Plugs into the cartridge slot, lets you plug in up to four cartridges.

BOOK

The most useful books we've found for the Vic and 64. Most by the founding editor of Commodore User.

Commodore 64 Subroutine Cookbook: David Busch

For would-be programmers everywhere. It's concise and accurate with excellent line-by-line descriptions guaranteed to turn you into an expert.

The Complete Commodore 64: Dennis Jarrett

Another excellent book - covering all the angles of the 64 to help both beginners and experts alike.

Corner

Getting the Most from Your Vic-20: Dennis Jarrett

Just bought a Vic-20? Then you'll need this comprehensive, carefully designed book to help get to grips with it.

The Good Computing Book For Beginners (3rd edition): Dennis Jarrett

The essential A-Z on computing. Wittily scripted, well thought out but most of all thorough.

MAN AT THE TOP

Howard Stanworth, Commodore UK boss, interviewed by Bohdan Buciak

A great deal happened at Commodore last year. The company released two new computers, the 16 and Plus/4, it moved to new and more prestigious premises in Corby, it received the Royal Warrant and saw the Commodore 64 yet again being voted 1984 Home Computer of the Year. But Commodore UK boss, Howard Stanworth, insists it's nothing to be complacent about. So how does he see the competition, how does he view Commodore's expansion and its increasing need to offer better customer service, and what's in the pipeline for this year? Bohdan Buciak trekked up to Corby to ply him with these questions.

Howard Stanworth doesn't profess to know a great deal about the technical ins and outs of computers, and he didn't get to sit in the big chair at Commodore because he's a technical genius (like Clive Sinclair?). He describes himself as an out and out manager: "I spent about seven years in managerial positions in the hi-fi and TV industry. I left that to run a plastics company, and then I spent three years as a director of Unigate Dairies."

But he reckons his experience and his eagerness to get back into 'consumer electronics' gave him the best

credentials for the job. "There's a strong connection between hi-fi and home computers. Both have grown out of their 'buff' origins into mass-market industries." But it's more the differences that interest him. "Computers are more exciting; with hi-fi you have a passive relationship, computers give you scope for personal inventiveness" — more about that later.

Happy New Year

Last Christmas saw the cash registers ring out again for Commodore and,

although Howard Stanworth will neither brag about that success, nor reveal how well Commodore actually did, he will say that the Corby plant was working "absolutely flat-out" sixteen hours per day, seven days a week to meet the demand for the whole of Europe.

Not surprisingly, the Commodore 64 remained the apple in Commodore's eye, accounting for the largest proportion of sales. But with the Christmas period over, is Commodore looking to cut the 64's price at some stage this year? Howard Stanworth's answer is

A hi-tech exterior for Commodore's new UK headquarters and manufacturing plant at Corby.

firm but disappointing: "There won't be any price reductions. You won't see prices going down like last year but you will see manufacturers putting in more features, more power — better value for money."

Sweet 16?

That brings us to the Commodore 16 which, selling at the same price as the Vic, must surely have made people in Britain turn their noses up at that much-loved yet veteran machine. But Stanworth has a surprising revelation: "The Vic is still in production here, but we're producing more for the world market. We won't stop producing until the demand ceases." That should ensure that existing Vic owners won't go short for service and repairs.

But how well did the 16 sell over Christmas and will it ever be as popular as the Vic? Again, Howard Stanworth is loathe to reveal sales figures: "It made a remarkably spirited entry into the market, and everything we've produced has been sold before it left the production line.

"I think the 16's success has taken a lot of people by surprise, excluding us. Many software houses said there was no longer a market for a 16K machine. We've proved them wrong, and at least a dozen software houses were getting a range of software ready for Christmas. Of course, we have a range of titles of our own."

So it looks as though Stanworth's faith in the 16 has paid off, despite initial criticism that the machine had no new facilities, offered less than the 64 and was really an example of technology standing still. For Stanworth, it was a question of what you're getting for the money. "We found that a lot of people were looking for a complete system for a little over £100 — the 16 starter pack gives you just that."

The 16 and Plus/4 have allowed Commodore to offer something both at the bottom and the top end of the home computer market. So how well has the Plus/4 been doing? Again, Stanworth shows characteristic reticence. "All I can say is that our expectations of demand for the machine have been fulfilled, but we've not been able to supply all the demand." And that's a lengthy way of not saying much.

Weighing up the competition

Despite all this vagueness, it looks as though the Christmas spoils were split fairly evenly between Commodore and Sinclair, establishing both at the very top of the market. "These two are now seen by users as the right products to have. Nobody likes to think they're buying a dead-end product. They want to be sure that they're buying from a company that's going to be around indefinitely" — a typically cautious way for Stanworth to say that Commodore is here to stay.

But so is Sinclair, always ready to do

MAN AT THE TOP

continued from page 71

battle: for example, its Spectrum Plus with its 'real' keyboard, was probably designed to make prospective Commodore 64 buyers think again. But Stanworth was not shaken: "I believe the customer is sufficiently educated to know that £50 extra for a keyboard is not good value". Or, to put it another way, you'd be silly to buy one.

On the other hand, the Amstrad machine does display very good value, but Stanworth doesn't see that as a serious contender either. "It hasn't got the distribution to affect our sales seriously." By that he means you won't find it in as many shops as the Commodore 64. Whether he feels it's better than the 64, he's not saying.

And that brings us to the people backing MSX, who must have spent a fortune bombarding you with adverts during the Christmas period. Howard Stanworth is more prepared to be outspoken here: "Criticisms that MSX is yesterday's technology and that it's over-priced are both absolutely valid and the reports are that the customer has recognised that.

"The Japanese are adopting the same tactics they've used in markets like hi-fi — producing established technology very well to try and get a market share. But I'm not complacent about MSX because you can't be sure what they'll do next year. They're gaining experience — but it's painful. We're not worried now but we don't take Japan lightly."

Neither is he taking lightly former Commodore International boss Jack Tramiel's acquisition of Atari and his drastic price-cutting of the Atari 800XL computer. But does it bother him that Tramiel is reputedly waging war on his former company? If it does, it's not showing: "Commodore dominates the world market. If you're going to be in the market, you've got to attack the market leaders; he'd have been pretty dumb to say he's attacking Coleco. Business is business — I've no axe to grind."

Servicing the user

With Christmas over, the number of people owning Commodore computers has increased again by leaps and bounds. That may be good for Commodore but not so good for its customers who need service and support, an area in which Commodore already has a less than admirable reputation. Stanworth asserts he's aware of the problem. "We almost tripled our sales last year, that's bound

"We're not only keeping up but improving our service capability."

to give us growing pains." That may sound like an excuse, but Commodore did have moving to a new location to contend with. Still, can he assure new customers that they'll get the kind of support they need?

"We're not only keeping up but improving our service capability. We're now in much better shape to cope with the post-Christmas service requirements this year than last." In what way? "A lot of changes have accompanied our move to the new factory. We now have a customer repair turnover of 2-3 days. People don't realise that most of the delays occur when the computer is travelling to and from us. We've also got more technicians, better equipment and better administration to deal with those repairs." It sounds good — whether it will work out in practice is still to be seen.

Many people, though, just want help with technical problems. What's Commodore doing to smooth those troubled brows? Again Stanworth has an answer ready. "When we moved here, we restructured the Information Centre and created grades for which our advisors had to qualify. They have to be able to explain technical things in a non-technical way.

"But you have to draw the line somewhere. Given the nature of our business, I don't think we'll ever be able to answer all the questions thrown at us. There are extraordinarily bright users out there — and lots of them." To overcome that problem, Howard Stanworth suggests people write direct to Commodore UK with their highly technical problems which will be passed on to the Technical Department.

Future prospects

Having achieved so much already, what more success is still to be gained? It's rumoured that the company wants more success at the business end of the market. "Yes, we want to re-establish our presence as a front-runner in business computers. But that won't be detrimental to the home market. I

believe that the markets are converging — in twelve months time you won't be able to make a rigid distinction between the two, both in technical specification and the way they're sold."

And the computer that may bridge that gap is the temporarily-named 'Lorraine' computer from Amiga, the American company Commodore has just bought out. Not surprisingly, Stanworth is keeping all the juicy details under his hat. "We don't talk about future products in detail".

One future area Stanworth will talk about is Compunet. He sees it as one answer to claims that the home computer market is well and truly saturated. "Communications networks and machine to machine communication is the next reason to buy a micro," he asserts. "I'm very excited about Compunet and the ways it can be enhanced. It's even got potential to give the user more processing power — and that may happen in the long term.

"But for most of us, it's a whole lot of fun because everyone can play. You're not just fed information, it's a community and a method of expression — people can put up what they like. That means Compunet has an organic life of its own, and that's what excites me."

Obviously Compunet is looking to attract lots of users and there is no inherent limit to its size. But, according to Stanworth, "Its success will not depend merely on the products and services available but on the inventiveness of its users. The software market has thrived on the inventiveness of usually young people — so will Compunet."

Howard Stanworth's view seems to be that the home computer market will never reach saturation point because there will always be reasons for people to buy them. This year the main attraction may be communications networks. Next year, there'll be different bait on the hook. If Howard Stanworth knows already what it will be, he's not telling.

We can agree with Michael Richter that 'Advanced BASIC Programming is not a contradiction in terms' (p. 1). Probably large numbers of Commodore enthusiasts who work in Basic find themselves looking for ways of improving or speeding up their programs. And they know that very often these ways do exist.

It is for such that Mr. Richter writes. Unfortunately, though, although he has much to say about the hardware itself, there is little that tells us how to use it. Apart from some useful tips in chapter 3, *Mechanics of a Program*, there is little to help us with our own programming.

There are program listings. Some of these are long; all are written in lower case and with some unfamiliar instructions for control keys. (c-d) is obviously 'Cursor down', but what do we make of: 9020 print''(clr) (grph) (home) (home) (tset) (c-d) . . . (c-d) "spc(39)" (bset) (wht)": poke . . . ?

There is, apparently, a disk available to supplement the book, originally intended, it seems, to be supplied at the same time, but the word 'enclosed' is struck out in ball pen! Instead, we are asked to send \$24.95 + sales tax to the publisher, or it can be charged to Visa or MasterCard. This might well help to achieve the object of the book, but makes it an expensive package.

George Pike

- Advanced Basic Programming for the Commodore 64 and other Commodore Computers
- by Michael Richter
- Robert J. Brady Co. (A Prentice-Hall Publishing and Communications Company)
- £8.95
- Difficult to find the wood for the trees

The front cover invites us to 'Find out what goes on inside the Commodore 64!' The back promises that 'By the time you've finished this book, you'll be fully prepared to study such advanced topics as machine language programming and arcade graphics. You'll not only understand how a computer works, but you will have learned powerful techniques that you can use in your own programs.'

Snooping is a technique for looking into the various memory locations of the computer. This is done through some 40 short programs which the reader keys in and, it is suggested, saves. These are easy to follow and each has a detailed explanation. Inevitably, some of the explanations are complicated; computers are complicated beasts.

There is a lot of precise detail. For anyone who feels the need to understand what happens between the keyboard and monitor screen, this is a painless, and sometimes amusing, way of finding out.

For me, the promise on the back

cover was largely unfulfilled. There is little about machine language and less on graphics. The book falls halfway — not enough for some, too much for others.

£14.50 for 205 pages is not cheap. Anyone content to write in simple Basic will find much of the detail unnecessary. To get into the realms of machine code and arcade graphics requires very much more information than Dr. Malitz's snoops will uncover.

George Pike

- The Super Snooper Book. Find out what goes on inside the Commodore 64
- Dr. Isaac Malitz
- Datamost
- £14.50
- Falls halfway

Close to the heart of anyone in computer marketing is a dream of millions of happy people doing Useful Things with their computers. Managing personal and small business records is certainly one such thing. Although computers like the Commodore Plus/4 include various data manipulating programs, older computers like the Commodore 64 need additional software to perform these functions.

There's no shortage of commercial programs to turn the dream of efficient data management into a reality on the 64, but writing your own programs is a different matter. The truth is that writing useful and reliable record-managing programs is hard; it's possible to know a great deal about Basic without having much idea about how to go about this task. The file-manipulating commands are sometimes awkward, but the real problem is figuring out how to structure the program once you've mastered the commands themselves.

This book is an attempt to make it possible for 'anyone' (to quote the Introduction) to write and use customised record-managing programs. I feel this to be a bit overstated, but it is at least an earnest attempt to satisfy a wide

range of skill levels.

The book starts very gently, with definitions of files and related terms, some discussion about how Commodore implements files, and some simple examples of creating and using files on cassette or disk. More than 30 pages are devoted just to these few topics, and commands are firmly integrated into their programming contexts. You won't find this kind of detail in books covering a more general range of topics.

Next, the book plunges right into programming a mailing list filing system. The author has made a certain set of choices in setting up this and other programs. For example, he prefers separate programs, each under the control of a master program, for each filing function, rather than one main program with separate subroutines for each function. Experienced programmers will be interested to compare the various examples to their own approaches. And beginners will have the advantage of an approach that works. One objection I have to the programming technique is the use of the Basic INPUT command for keyboard input; this has too many limitations and pitfalls for the unwary user.

There are sections devoted to both sequential and relative (random access) files. Sequential files can be implemented on either tape or disk, but relative files require a 1541 or equivalent disk drive. I found that several lesser-known quirks about Commodore files are glossed over or not mentioned at all in the book. For example, there is an easy way around the 80-character limitation on input record length. Also, in the section on relative files I didn't find any mention of the fact that you can read part of a record, but you generally can't write just part without getting into trouble.

In summary, this book fills a real void in the literature available for the Commodore 64. It seems to me that there are too many books about game programming and virtually none about more 'serious' topics like this. The book is well-written and thorough, even if not as easy to follow or master as the author would like you to believe. If you have some background in Basic, or are working to get it, this book is absolutely essential reading before you try writing your own record-managing programs. At a price of £8.95 (for more than 400 pages) it must be considered a real bargain.

● Copies of all the programs in the book, plus additional programs and documentation, may be purchased as a two-diskette set for \$27.50 from: C-64 FILES, AEN, 9525 Lucerne St., Ventura, CA 93004, USA.

**NOW
PROGRAMMING**

**YOUR HOME
COMPUTER**

IS AS EASY

**AS READING
THIS.**

Let's face it, most 'beginner's guides' are anything but easy reading.

Now Dorling Kindersley have come up with a new way of learning BASIC that's unique, simple and down-to-earth.

It's called 'Screen Shot.'

Unlike ordinary guides, Screen Shot uses full-colour photographs of real computer screens to show instructions, program listings and displays.

So what you see on the screen in the book is precisely what you'll see on your own computer screen.

Which makes our programs easy to understand, easy to read and free from misprints or other sources of confusion.

The accompanying explanations are clear, practical and are written by experts.

You'll find there are Screen Shots for most popular makes of home micro.

Books 1 and 2 of each series form a complete guide to BASIC programming for that computer.

For the more adventurous programmer, Books 3 and 4 explore the creative world of computer graphics.

In the words of a reviewer in 'Big K' magazine, Screen Shots are "...clearly and expertly written with the best layout I have seen in a book of this sort... what you see is (for once) what you get. Outstandingly good and for beginners or semi-beginners: highly recommended."

The message is clear. If you really want to get into programming, get a Screen Shot.

With anything else, you won't be fully in the picture.

Screen Shot
PROGRAMMING SERIES

Screen Shot books available from larger branches of BOOTS, MENZIES, WH SMITH and other leading bookshops and computer stores. In case of difficulty, write to: Dorling Kindersley, 1-2 Henrietta Street, London WC2E 8PS.

Screen Shot Books 1 and 2 available for Commodore 64, Acorn Electron, BBC Micro, Sinclair ZX Spectrum, Sinclair ZX Spectrum+, Apple IIe. Books 3 and 4 available from April 1985.

Dorling Kindersley Publishers Limited.

MAKING THE GRADE

Longman 'O' Level revision programs reviewed
by Colleen Young

One of the programs in the French course lets you identify wine and cheese producing areas of France.

This graphic program, in the Physics course, looks at different aspects of Ohm's law in simple circuits.

Each subject covered in the range comes on tape and, rather annoyingly, only the latest French and Biology programs feature a turbo loader. Each program is accompanied by a slightly cumbersome leaflet which contains instructions for using the programs and notes on 'revision techniques'. Nothing really new here, though. You're told how to organise your subjects and time, how to learn most effectively and how to keep your interest going. The leaflet includes an eight-week revision planning chart and a checklist of subjects to be covered.

All tapes have a standard format in that there are five different programs for each subject covered. Although they're advertised as being suitable also for CSE candidates, I feel they'd be more useful for 'O' Level students.

The first program on each tape is called *Text*, it is simply a long list of references (something over 500) on the subject in question. You can, for instance, see a set of references on Geometry on the Mathematics tape or Heat on the Physics tape; the latter would produce a list of words associated with Heat: boiling, conduction, convection and so on. In this case, there were a total of nine words. But no actual definitions of the words are given.

The idea is to study the lists and look up any unfamiliar words. This is quite a good idea, but would, I suspect, have limited use, since you'll probably tire of it quickly. One problem is that not all the words will be familiar to a student in that they are not on his/her syllabus. (The same is true of course with revision books, though some do give advice on the different examining boards.)

The maths pack

So let's start with **Mathematics**, the programs (apart from *Text* mentioned above) are: *Transform*, *Trig*, *Stats* and *Odds*. *Transform* allows you to plot a figure by giving the x,y coordinates; you can then transform the figure by using enlargements (including one-way stretches), reflections, rotations and translations. Compound transformations are also allowed.

However, this program is rather spoilt by two factors: the scale is fixed and a bit of

Last month we looked at a wide range of educational software for tiny tots and budding juniors. But the Commodore 64 has also spawned a few programs for older children, exam revision software in particular. Longman Software now has a range of cassette-based programs covering Mathematics, Physics, Chemistry, Computer Studies and, just released, French and Biology. Colleen Young, herself a teacher, finds out whether these programs will put you top of the form.

an odd choice at that; also the positive and negative rotations are the wrong way round. This is a great shame as the program is otherwise excellent — the displays of the transformed figures are very good indeed.

Next comes *Trig*, which as its name implies tells you all about triangles including Pythagoras. It allows you to

enter your own data to solve triangles as well as giving you demonstrations. *Stats* will produce pie-charts and bar-charts; these are easy to produce and very colourful.

The last program on the tape is on probability, which gives the program the opportunity to include some games to give you a breather. Unfortunately the explanations

given here are not very comprehensive; they start simply but suddenly introduce new ideas out of the blue! Also too much emphasis is put on a chance of '1 in 2' say, whereas children learn that a probability has a value between 0 and 1.

Getting physical

On to **Physics**; the programs here are *Formulae*, *Circuits*, *Light* and *Machine*. *Formulae* gives you the opportunity to choose a topic, it will then give the relevant formulae together with rearrangements. You also have the option to enter your own data to find an unknown. The program contains a demonstration on solving equations which would have been quite nice but for a horrible error! It occurs in an equation for acceleration. Having given you the time-honoured advice which Maths and Science teachers must mutter in their sleep — 'you must do the same to both sides of the equation' — the program proceeds to multiply one side by T and at the same time divide the other side by T . . . things get worse, two Ts are then cancelled, both of which are in the denominator! This apart (though I find it hard to forget), it's a handy program if you are trying to learn a few formulae.

Circuits demonstrates Ohm's Law. The circuit diagrams are nice and it seems a useful program. For any electrical circuit given, you are told the values for current, voltage and resistance, then a second lamp is added and you are given the new readings. Then you're on to resistance; the program includes tests which follow on well from the tutorial section. One gripe is that text scrolls annoyingly slowly across the bottom of the screen.

The next program, *Light*, includes lenses, mirrors and ray diagrams. Well illustrated explanations are given followed by tests. The final program, *Machines*, discusses levers and pulleys. After a promising display of a pulley system what follows is rather less exciting (various formulae with explanations) though quite useful. My favourite part of this program was trying to throw a stone at a castle using the stone-throwing engine — a great incentive to learn about the Principle of Moments!

24 HR ANSWER SERVICE

MAKING THE GRADE

The right Chemistry?

The **Chemistry** tape contains the programs *Elements*, *Mole*, *H2S* and *Reactivity*. *Elements* gives data on the most significant elements in the Periodic Table. The information may be retrieved in various ways, giving a good demonstration of the way a computer stores and manipulates data, as well as useful information. The student can compare aspects of various elements using the program.

Mole tackles the calculation of the mass of one mole of any given compound. Tests are provided as well as the explanations; quite a useful program. Then it's on to *H2S*, which is a game — great fun! You are given a task to perform, for example, to make up some compound. You also get a list of things you need. Collecting this equipment involves running round a lab opening cupboards, if the fume cupboard is opened you need to make a mad dash for the door to save yourself.

The final section, *Reactivity*, is a tutorial and test on the relative reactivity of a series of metal and non-metal ions. Ion exchange in solutions is also covered, as well as double decomposition. It is possible to enter your own compounds to see how they behave in solution — a well presented program.

Use your computer

On to the **Computer Studies** tape, which contains the programs *Visicode*, *Putin*, *Files* and *Logic*. Out of that lot, *Visicode* and *Logic* are the best by far. *Visicode* would be useful for teaching as well as revision; it demonstrates low-level languages very well indeed. An example program is given and the contents of the accumulator and registers shown as the program runs.

Logic shows how logic circuits operate and includes tests where the student has to give the output of a gate given the input. *Putin*, though, drove me mad; this is a collection of routines containing deliberate programming mistakes which the student is supposed to correct. A reasonable idea I suppose but I wasn't sure that all the effort was worth it when I ran the

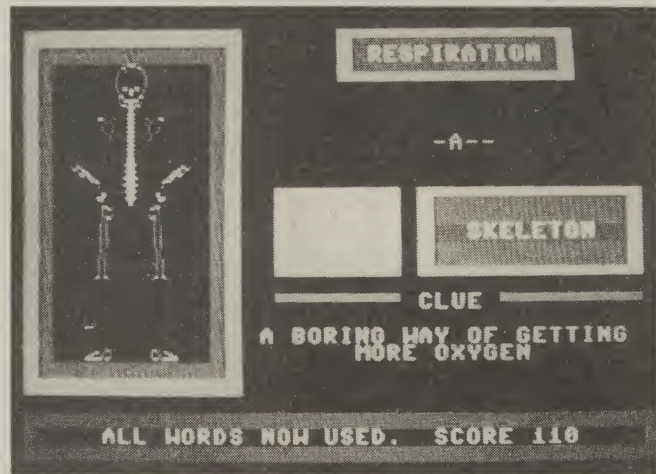

corrected versions. It would be easier to write your own routines in the first place.

Files covers what must be one of the most important aspects of the syllabus, demonstrating various file handling routines. It also lets you create files of your own. Perhaps I have been spoilt (we have *Superbase* at school) but this was a bit of a let down and does not really illustrate the topic well.

Test your French

The French revision tape opens with two programs, *Lexis 1* and *2*, which attempt to consolidate your knowledge of French vocabulary. Like the rest of the package, these programs are menu-driven, allowing you to choose from a range of fourteen themes. When you've done that, you can display all the words and test yourself either in French or English.

The third option lets you type in a word and then receive its translation. That may sound useful but, unfortunately, it's very slow and no substitute for grabbing your dictionary. *Lexis 2* works in the same way but extends vocabulary to around 2,000 words.

Biology course — answer the questions and build a skeleton.

The next program, *Verbs*, lists seven regular verbs, three regular reflective verbs and 38 irregular verbs. The object here is to allow you to revise the various tenses and forms. You choose various options from the menu: as well as the present, imperfect, future, perfect, past historic and present subjunctive, you get the conditional and the various participles. Corrections to wrong answers are always highlighted in red.

Moving on to the *Comprehension* program, you'll find it's all getting more difficult.

You choose from a range of short 'stories', reading, understanding and almost memorising them because you must rewrite the story, bit by bit, being prompted by little graphic displays (rather basic) of what's happened. The stories are pretty uninspired, though. Like the earlier stages, special keys give you accents, circumflexes and cedillas. But there's some carelessness here — one accent uses the shifted 'slash' key, but you're not told it's shifted.

Onward to the last program for a little fun. So far the screen has shown only text. This program has both graphics (a lo-res map of France) and sound (the French national anthem). Despite that, this section is the least worthwhile. From a list of regions, towns, wines and cheeses, you can find out in which part of France they're located. Generally, the program does provide a novel and alternative way of overcoming the tedium involved in learning and testing your French vocabulary.

Getting Biology taped

The Biology program starts by giving you a flowchart of how

question correctly, you get to put a bone on the graphically depicted skeleton. The rules aren't explained, though; you must discover them through 'scientific method'. There's a nice touch here: when you've chosen your option, a skeleton head moves across the screen and munches the words.

Next to load is *Heredity* which looks at dominance, blending, sex-linked characteristics and punnet squares. Graphic guinea pigs abound here. You're presented with a mating and asked to predict the proportion of the F1 generation which would have each possible phenotype. The punnet squares show the expected results of fertilisation, taking green and yellow peas as the example.

Kingdoms is concerned with the animal and plant world, allowing you to build up the characteristics of a particular specimen by choosing from lists dealing with structure, nutrition, reproduction and size/visibility. So if you chose a single-celled structure that was parasitic, reproduced by division and was microscopic in size, you'd get the answer 'bacteria'. If the computer can't find a direct correlation, it will give the closest.

Finally, there's *Food*, a program that lets you calculate a person's daily energy needs by specifying weight and daily activity. There's also a game to test your knowledge of the water, protein, fat and carbohydrate content of various foodstuffs. That's complemented by a list of their calorific values.

Conclusions

It will become apparent that the programs vary both in quality of material and presentation. But at the reasonable price of £7.95, there is certainly something on each tape to make it worthwhile.

It could be argued that most or all of the information presented in the courses could be found in revision text books. But that would deny the sheer novelty value that a computer must have over text books for children. Probably no child relishes revising for exams. These programs will make their less favourite subjects more palatable.

Write away

This is your page: normally we write for you, but here we listen. Feel free to let us know what you think – about the magazine, about Commodore, about suppliers, about life, art, the meaning of existence or whatever. We don't print everything we receive, of course; but anything that might be of specific relevance or general interest will make it to these pages.

Good words for the 1520

In the December issue of *Commodore User*, one of your reader queries was, 'Which word processor gave support to the 1520 printer plotter?'. You replied that you didn't know of any word processor that gave support to the 1520.

This letter was written using a word processor and printing it out on my 1520 plotter.

The word processor that I use was supplied to me from A&C Software, 51 Ashtree Road, Tivendale, Warley, West Midlands B69 2HD, tel: (021) 544 7135.

The program is fully menu driven, and at the completion of every option you are returned to the menu for further processing. The main menu options available are as follows:

- write text
- edit text
- print text
- save file
- read old file
- exit/clear memory
- memory check
- disk directory

It will also give you tab indent as well as right justification and text can automatically be centred.

The wordprocessor is called 'TEXTFILE' and in my opinion represents very good value for the £8.25 that I paid for it in September.

H. Pepper, 35 Amethyst Road, Bilton Grange, Hull HU9 4JE North Humberside.

The layout of your letter was certainly impressive – but it looks as though the program can't manage the 'f' sign.

1520 again . . .

With reference to the article on the '1520 Printer Plotter', which appeared in the December issue of *Commodore User*, I would suggest that you are being robbed if you pay out £5 for a set of four pens. I can get the same pens in Newcastle for £3.95. Again if you go to your nearest 'Tandy' shop – they are called 'Radio Shack' in my area – the same pens are available at £1.99 for a set of three; either three black pens, or three coloured pens. Their paper rolls are also the same as Commodore's, and cheaper.

Mr Chris Durham is to be congratulated on his very clever program 'Biorhythms'. Please let us have more of them.

T.H. Brown, 92 West Farm Avenue, Longbenton, Newcastle on Tyne NE12 8RU.

And again . . .

In the December issue of *Commodore User* Tommy stated that there wasn't a word processor which supported the 1520 Printer Plotter. In actual fact "Easyscript" will support the 1520 without any modification. Simply proceed as follows: before loading "Easyscript" enter the following (in direct mode):

**OPEN6.6.6: PRINT #6.1:
CLOSE6**

This sets the plotter to normal lower case/shifter upper case.

Then load "Easyscript". After typing your letter etc. press (f1) then O (output) D (device) 5 (rtm) for the plotter P (to print out).

P.S. You may have guessed that this letter was printed using the 1520 and "Easyscript"!

Steven Birks, 86 Birches Head Road, Birches Head, Stoke-on-Trent, Staffordshire ST1 6LJ.

Upgrade blues

With the demise of the Vic 20 there may be a number of your readers who are considering the 64 as a replacement. Let me sound a note of caution.

My original configuration was the Vic 20, 1515 Printer, Datasette and 1540 Disc Drive. On enquiry from the supplier I was assured they were all compatible with the 64. The supplier gave me a weird 'Open' command to use with the Disc Drive which was confirmed by CBM Corby. Needless to say it did not work. Further enquiry to CBM gave me a couple of 'Pokes'. This appeared to work until I attempted loading a database program. Yet another enquiry gave me the information that the 'Pokes' would not work if there were any 'Loads/Saves' in the program and the only way to ensure success was to change a chip in the 1540.

I loaded the 64 magazine tape from the Datasette and got a 60% 'Load Error' response. A friend loaned me his C2N and everything was perfect. This means I've spent £22.42 for a chip and £39.95 for a C2N. So, when a supplier tells you that the peripherals are 64 compatible – they're not.

C.K.R. Harris, 53 Martin Avenue, Stubbington, Fareham, Hants PO14 2RZ.

Obviously your supplier didn't know better or was leading you up the garden path. You're right, the 1540 suffers timing problems when linked to the 64. Commodore will sell you the upgrade chip for £19.95 but charges £35 to fit it for you. By the way, the 1530 Datasette and the C2N are identical inside. Both are compatible with the 64.

Chart flopper

After reading the December issue of the magazine I was disappointed to see that the charts did not include one Vic 20 program, I noticed that the Commodore 64 had its own charts and was included in the top thirty. Couldn't the Vic 20 have its own top 20?

I enjoyed the screen scene very much this week, with a picture of the game on screen it makes it easier to choose a good game.

I am glad to see that the

magazine now includes a Vic 20 adventuring spot, I am a keen adventurer so you can see it was good news to me.

I enjoy your magazine very much so keep up the good work and I'll keep buying it.

Vaughan Morton, 25 Beaumont Lawns, Marlbrook Lane, Bromsgrove, Worcs B60 1HZ.

The very reason that Vic games hardly ever appear in the charts means we can no longer justify a Vic chart. I'm afraid the Vic Adventure Round-Up is not a regular column. Sorry.

Easy repeat

With regard to one of the *Victuals* you published in the December issue: 'Key Repeat' by William Fong. Try **POKE650,255** and hold down any key. Slightly shorter? **Nick Weatherhead, 58 Kingsbury, Aylesbury, Bucks.**

High score

I was very glad to see the joint offer made by you and Melbourne House. I am an avid Shoot 'em up and Olympic maniac and have never ever attempted an adventure.

I read most magazines with envy when I hear of people who have completed this adventure and that adventure, so I decided why not try one? And for a game that looks a great prospect, but only cost 95p, how can you go wrong?

David Brown, 8 Albion Road, Walthamstow, London E17.

For only £13 a quarter and just a local* telephone call whenever you want to connect up (that's only 22p per half hour at cheap rates) you could be part of Micronet.

The only accessory you need is a Modem.

A small price to pay to join the other visionaries on this exciting new system.

Fill in the coupon for more details and send to Micronet 800, Durrant House, 8 Herbal Hill, London EC1R 5EJ.

But be warned, Micronet 800's features are almost limitless and constantly updating. So maybe you'd be better to call in at Laskys, John Lewis, main Boots or your local Micronet 800 Action Station.

To feast your eyes on all the amazing things it can do.

To: MICRONET 800, Durrant House, 8 Herbal Hill, London EC1R 5EJ. Telephone 01-278 3143.
Please send me the full facts about Micronet 800.

TOMMY'S TIPS

Tommy is Commodore User's resident know-all. Each month he burrows through a mountain of readers' mail and emerges with a handful of choice queries. The result, before you, is a wedge of priceless information and indispensable advice. There's even the odd useful tip as well.

Dear Tommy, I have just bought a 1520 printer/plotter and the Vic Type word-processing package but it will not work with the 1520. I've tried changing the program but it's in machine-code - big problem. Can I change the 1520's device number or do I need to buy another program.

Another problem is the sub-commands involved in drawing with the plotter. Please could you explain them?

Regarding changing the device number of the 1520, it was covered in the review in the December issue. It involves adding a wire to the PCB so you will need a soldering iron (or a friend who can solder).

If you want a slightly better program to enable you to print directly on the plotter then try the following little program. It allows you to correct a line on the screen before sending it to the printer and you do not have to press Return at the end of each line (unless you want a new paragraph) although some long words may get wrapped round. To end the program, type '@'. (For those who would like to try this on an 80-column printer, alter the '40' in lines 60 and 90 to '80' and alter '35' in line 90 to '75'. You will also have to change line 10 to device 4 only and delete line 15):

```
10 OPEN4.6: OPEN6. 6. 6
15 PRINT #6. 1
20 PRINT "[CLR]": P$=""
30 GET A$: IF A$="" THEN 30
40 IF A$="@ " THEN PRINT:
   PRINT #4, P$: CLOSE4:
   CLOSE6: END
50 IF A$=CHR$(20) THEN
   PRINT "[CUL] [CUL]": :
   T=T-1: P$=LEFT$(P$, LEN
   (P$)-1): GOTO 30
60 IF A$=CHR$(13) AND T < 40
   THEN PRINT
65 IF A$=CHR$(13) THEN
   PRINT #4, P$: P$="": T=0:
   GOTO 30
70 CH=ASC(A$): IF CH < 32 OR
   (CH > 93 AND CH < 193) OR
   CH > 218 THEN 30
80 PRINTA$: P$=P$+A$:
   T=T+1
90 IF (T > 35 AND A$="" ) OR
   T=40 THEN A$=CHR$(13):
   GOTO 60
```

100 GOTO 30

As for the 'sub-commands', these move the pen relative to either a fixed start point or another point which you can specify. They can best be explained as follows:

- H — plotting equivalent of HOME, moves the pen to the start point without drawing (Pen up)
- I — sets a new point of origin where the pen is (called the *relative origin*)
- M — moves the pen to position X,Y with respect to the start point (Pen up)
- D — as 'M' but with the pen down
- R — as 'M' but the X,Y are with respect to the *relative origin* instead of the start point (Pen up)
- J — as 'R' but with the pen down

If the *relative origin* is set at (50,0) then PRINT #1, "M"; 50; 150 will move the pen to (50,150) with respect to the start point whereas PRINT #1, "R"; 50; 150 will move it to (50,150) with respect to the *relative origin* which is the same as (100,150) with respect to the start point.

I hope that's not too confusing; the best way to learn is to try it out with a few simple programs.

Dear Tommy, I have tried everywhere to find out what the screen locations of the block graphics and colour for the 16K expanded Vic are. Please could you tell me?

Also, could you tell me if

there is any way of storing a picture on to tape from the visual display unit, and recalling it from tape? By the way, could you also tell me if there is any method of disabling the Run/Stop key?

The screen and colour maps for the expanded Vic are at 4096-4607 and 37888-38399 respectively. As for storing information from the screen, the following code will do it in Basic:

```
1000 OPEN2. 1. 2. "SCREEN
   DATA"
1010 FOR A=0 TO 511
1020 PRINT #2, PEEK (4096+A)
1030 PRINT #2, PEEK (37888+A)
1040 NEXT A
1050 CLOSE 2
   To read the screen back in, use
   the following:
2000 OPEN2. 1. 0. "SCREEN
   DATA"
2010 FOR A=0 TO 511
2020 INPUT #2, SC: POKE 4096
   +A, SC
2030 INPUT #2, CL: POKE 37888
   +A, CL
2040 NEXT A
2050 CLOSE 2
```

These routines will not be particularly fast, since you would need to go into machine code for speed, but they will enable you to preserve a screen and recall it. Note that to use them you must ensure (for the 'save' at least) that the action of calling them does not put text on to the screen.

Therefore incorporate a line GET F\$: IF F\$=CHR\$(133) THEN GOSUB 1000 somewhere in the main loop. Pressing f1 will now cause the routine to store the

screen. You must ensure that the tape recorder is already set up to record and press the play/record buttons before pressing f1, otherwise you will get the warning message on the screen which will be saved along with your masterpiece.

Lastly, POKE 808, 251 will disable the RUN/STOP key — simple as that.

Dear Tommy, I am doing some development work with my Commodore 64 and 1541 disk drive for the manufacture of steel castings.

The contents of the program I do not want to be available by listing on the printer or screen. Once the program is Run the 'Run/Stop' key has been disabled and I have made it cold start upon an error.

However, straight after loading, the program can still be listed; it needs to load and run in one operation. Is this possible for me to do?

This query gives me the chance to try out a short auto-run program that I have had in the back of my mind for ages. If you're sure no-one is looking over your shoulder I'll show you how to do it. Write your main program as normal and debug it. When it is running perfectly, store it on the disk as "P2 ". With P2 loaded into the machine type the following in direct mode: PRINT PEEK (46); PEEK (45) and write down the two values that appear on the screen.

Now type NEW and then the following program:

```
10 POKE 46, X:POKE 45, Y:CLR
   (replace X and Y with the
   values you wrote down)
20 PRINT "<CLR> <CUD4>
   <CUR5> PROGRAM
   LOADING - PLEASE WAIT"
30 LOAD "P2<DEL><DEL>".8
40 END
```

(The are added by closing the quotes, then pressing 'SHIFT INST' twice, followed by the delete key twice. This ensures that the main program has no name and so cannot be loaded directly from the disk. Check the program very carefully and then

type the following in direct mode exactly as shown (replacing <CLR> by 'SHIFT CLR/HOME' of course):

POKE44, 0: POKE43, 198

<RETURN>

POKE198, 0: POKE631, 82:

POKE632, 85: POKE633, 78:

POKE634, 13: POKE198, 4:

?<CLR>: SAVE "P1", 8

<RETURN>

Ignore the Syntax Error you will get and turn off the machine immediately after saving the program as the start of Basic has been altered (note that if you make a mistake in any of the direct commands you will have to start again from scratch). To run the loader program, type **LOAD "P1", 8, 1.**

This will alter the start of memory to include the input buffer. By POKEing 'RUN' into this buffer we have ensured that it will be actioned as soon as the program is loaded, making the first program auto-run. This then sets the memory to the correct size and auto-runs the second program. Note that this method will NOT work with the cassette as the cassette buffer gets overwritten when you try to load the first program.

Dear Tommy. I have seen a number of ads for a 64K Ram card for the Vic 20. The reference guide says the maximum expansion is 32K. Can the Vic be enhanced to 64K or are there drawbacks?

If a 40/80 column card was also added, would this make the Vic 20 a viable word-processing/business computer comparable to the 64 (assuming the addition of other peripherals and software being available)?

The Vic *cannot* be expanded to access more than 27.5K from Basic or 34.5K from machine code. What these 64K RAM packs do is to give you *alternative* memory locations in the form of 'pages' of memory that can be swapped in and out. They have their uses, since some of them will allow you to store more than one program in memory and switch between them at will, thus saving valuable time loading from tape. However, you still have to load the programs in initially unless the RAM also has some form of battery back-up. What these RAM packs will *not* do is to turn a Vic 20 into a Commodore 64.

With regards to a 40/80 column board, these can be extremely useful if you want to use a Vic for regular wordprocessing or stock accounts and spreadsheets, for

use in a small business and you don't want to upgrade to a bigger computer. While they will not give the memory of a 64, thus limiting the amount of data that can be stored at one time, this just means that disks are a must for serious use.

Software is available for such boards, but usually only from one company since each board works slightly differently and the software is usually written specifically for it. You will also require a monitor, since none of these boards will work with a standard TV.

These are just two of many queries relating to User Defined Graphics on the expanded Vic. One of the problems with redefining the character set on the Vic is that it can only be done within the original 5K RAM that is permanently in the machine. With the unexpanded or 3K Vic there is no problem since you can position the new character set under the screen memory and move the top of Basic down.

Unfortunately when the Vic goes over 8K RAM then the screen moves down below Basic, leaving no room for the character set. The only solution is to move the bottom of memory up and fit the new character set between the screen and start of Basic. Because you are now moving the start of Basic it is not possible to do it from within a Basic program.

What you need to do is write the program from the new start position, having altered it in direct mode, then save the program and reload it using the command **LOAD"filename",1,1.** However, unless you use a m/c loader program which alters the start of Basic pointers you will still have to do it by typing the commands before loading the program; there is no easy alternative in Basic.

To move the start of Basic type:
POKE44,24: POKE43,1:
POKE642,24: POKE641,0: CLR:
POKE6144,0

To move and relocate the character set use the following code in your program:

10 FOR A=0 TO 1023

20 POKE 5120+A,
PEEK(32768+A)

30 NEXT A

40 POKE 36869, PEEK(36869)
OR13

Note that the character set must begin on a 1Kbyte boundary. Since the screen starts at 4096, the next boundary is 5120. The minimum character set requires 1024 bytes, hence Basic has been moved to 6144; if you want more than 64 characters you can move the start of Basic even higher.

CLASSIFIED

Vic-20 Word Processor. Victext. Powerful word processor. Facilities include:- Large text buffer, auto centre text, variable tab, insert, amend, delete, copy, move text, word count, right justify, etc. Fully menu driven with comprehensive easy-to-use instructions. Needs +16K expansion min. Great value: cassette £6.95, disk £9.45.

Vic-20 Data File. Takes the place of any card index. Facilities include:- save, loadfile, full sort, print all/part records, amend, delete records, memory remaining, etc. Needs +8K expansion min. Cassette £4.50. Both programs can be used with all direct connect Vic printers inc 1520 printer/plotter. Fast delivery by first class mail. Send cheque/PO to: A&C Software, 75 Oakthorpe Gardens, Tividale, W. Midlands B69 2LF.

Vic-20/CBM64 Software Hire

No membership fee! Quality titles (eg Skyhawk, Jetpac, Flight 015) from 50p per week. Already 500 delighted members. Join them now. All games originals. Send 2 x 17p stamps for your Hirekit (please state which machine) to:
VSH(CU), 242 Ransom Road, Mapperley, Nottingham

Attention all Vic-20 and CBM64 users. Whether you're a dealer, user group, individual or software library, do you really know what commercial software there is for the Vic and the CBM64? Well it's taken us ages to come up with the document, it covers games, utilities, education, books and business software. It gives descriptions, hardware, price, independent ratings and suppliers with addresses etc. For delivery asap send cheque/PO for £5.00 UK or £6.00 overseas to Cementis Information, Box 015.

Wanted 1541 discdrive with all leads and manuals for cash. Also software to swap or sell. Lots of titles. Such as Raid Over Moscow, One on One, Count Down to Meltadown. Tel Grimsby 74584 and ask for Martin or send your list: 157 Crosby Road, Grimsby, South Humberside DN33 1LY.

CBM64 penballs wanted to swap software and tips. Send letter (with list) to Tore Afdal, Florasv. 31, 1890 Rakkestad, Norway.

Commodore SX64

Portable Business Computer for sale. 64K Ram. Integrated 5" screen. Single disc drive, £850. MPS 801 Printer, £250. 4 Business Software Packages, £150. Call Marlow (06284) 72320 Anytime or Marlow 71431 after 4pm.

CBM 64 owner Wants to swap software with European, Australian and American owners. Have many good files. Please write. (All letters answered). Send your lists to: Jonny Mikalsen, Box 124, 5460 Husnes, Norway.

VIC-20 owners, interested in languages (French, German, Italian, Spanish)? If so send SAE to: M. Lenihan, 109, Clive Road, Fratton, Portsmouth, Hants, PO1 5JD for your free brochure. All software titles only £3.00

For Sale interface for VIC 20 uses any standard computer compatible cassette recorder £10.00. Contact Matthew Metcalf, 2 Coalbank Road, Hetton le Hole. Telephone 265416.

VIC-20 plus cassette recorder switchable 4-slot motherboard 16K RAM 3K super expander, manuals, magazines and games. Very good condition. £150 ring Jane on Cambridge 207767.

DRIVE A TRAIN

Drive in your own home, such famous trains as The Flying Scotsman, Cornish Riviera, Master Cutler and The Royal Scot. Exciting and addictive games for the rail enthusiast and layman alike. **Our latest game** — ROYAL SCOT. From Euston to Crewe with a choice of motive power — class 87, Advanced Passenger Train and class 86. CORNISH RIVIERA. From Paddington to Exeter with a stop at Reading hauled by H.S.T., class 47 or class 50. MASTER CUTLER. St. Pancras to Leicester fast or stopping (6 stations) behind Peak class 45, 47 or H.S.T. FLYING SCOTSMAN. A fast dash from Kings Cross to Doncaster behind the legendary Deltics, H.S.T. or Brush 47. All of the above games available for the BBC 'B', CBM64 and Spectrum 48K price £7.50 each inc. P&P. Available from: DEE-KAY SYSTEMS (Dept CS) 18 Salford Close, Woodrow South, Redditch, Worcs B98 7UN.

VIC-20 software, maze gold (new) £4.50, Arcadia £2.00, Duck-shoot, Sub Hunt £1.00, Cassette 50, £5.00. Tel: (0504) 267901, after 6pm, write S. O'Neil, 12A Blighs Lane, Derry, Northern Ireland.

10 Disks unused. BASF, 40 track, single density, £16.00. Commodore Macro Assembler, hardly used, £15.50. Ring Mark Asteris on Emsworth 5897, or write to 10A Park Crescent, Emsworth, Hants.

VIC-20 voice synthesiser 16K RAM Pack basic part 1 & 2 education programs, games + more, all for £50. Steven Ballard, Birchetts Lodge, Stockland Green, Spelthurst, Kent, or phone Langton 3173, now.

CBM 64 software for sale: Superbase 64 — £45, Easyscript — £25, RS232 Interface for Smith-Corona TP-1 printer £15, Grandmaster £5, Zaxxon £4, Forbidden Forest £4. Others. All ½ price. Ring Albert (0865) 54084 (eves+wend).

CBM64 software to swap. Titles include Up and Down, Ghostbusters, Bruce Lee, Pogo Joe, Popeye, Cyruss, Sentinel, Mikro Assembler and many more. Ring Slough (Berks) 32762 and ask for Raj

Perfect condition Vic-20 not yet a year old, recently serviced, still under guarantee, sold with cassette deck, intro to basics and 54 games for just £100. Phone (01) 368-3873, after four o'clock, Monday to Thursday.

Penpals wanted VIC20 to exchange games programs ideas etc. Please write to Paul Hallas, 5 Beatrice Ave., Bebbington, Merseyside L63 5JS.

Pen Pal wanted to swap games and tips for the CBM 64. Must be a boy, age between ten and thirteen. Write to A. Soard, 4 Westfield Close, Laverstock, Salisbury, Wilts., SP1 1SG. All letters answered)

64 software to swap. 100's titles, all types. Disk users please send list to Stephen Howard, 53 Valley View Road, Rochester, Kent or phone 0634 812833 for a fast reply.

VIC-20 Penpal wanted 10 year old boy would like a penpal anywhere, but especially abroad. Write to Adrian Borg, 31 Knutsford Road, Moreton, Wirral, Merseyside L46 8TN.

CBM64 VIC20 correspondents required user group to user group also software exchange if possible

USA — C64 user group would like to ex-software and ideas with European groups or individuals. Prefer disk, but will consider tape. Respond to: Metro-Area Commodore Club, Box M, Mendota, Minnesota, 55150 — U.S.A. Or call: (612) 778 8188

CBM-64 user in Southern Africa wishes to swap software with users anywhere in the world. Have over 300 titles. To: Stanley Levitt, 3 Waverley Road, Savoy, Johannesburg, 2192, South Africa

Italian CBM 64 owner wants to exchange programs on disk with owners in all the world. Please write to: Alberto Borgini, Via San Rocco 34, 21013 Gallarate (Varese), Italy.

Unused easyscript disc plus manual, £50 or exchange for Superbase 64. Thomas, 23 Wordsworth Avenue, Cheltenham GL51 7DY

VIC-20 starter pack. Things included: Vic Book plus 14 games, value £250 will sell for £120 o.n.o Ian Marshall, Kilbirnie 683816.

VIC-20 for sale — computer alone — all offers considered. Also Voo Doo Castle and Adventureland cartridges, £6 each. Many cassette games also for sale — unexpanded VIC only. Cheap prices. Phone 021 353 6383

VIC-20 starter pack over 140 worth of software, introduction to basic 2; Quickshot 2, Joystick, altogether worth over £300. Yours for only £150 o.n.o. Telephone Coventry (0203) 360 950

VC-1525 Graphic Printer (as new), paper width up to 10". Suitable for VIC20 or 64 and complete with 'Simply Write' word processor for VIC20. Also includes 'Buti-Plus' programming aid cartridge with 3K memory expansion and machine-code monitor. Bargain at £160 o.n.o. M. Shaw, 032 879339

CBM 64 good condition £180 Disc Drive 1541, £170. Easy Script plus 6 games on disc £40 Grandmaster Chess tape, £5 Games disc with many games. Sell separately or the lot, £390. Write to T. Matthews, 2, Spring Lane Cottage, Sonning Eye, Nr Reading, Berks RG4 0TZ

VIC20, (75) C2N. Recorder + £25 cassettes for only £50. 3 cartridges, £15, switchable 16k RAM, £30. Intro to Basic, £8 or the lot for £170.

VIC20 plus C2N cassette, 16k rampack, over £100 software including Jet Pack, Pharaoh's Curse and more. Maths CSE Revision and intro to basic part 1. Phone Mike Bedworth 313650. Price £150

CBM 64 software for sale Cluedo (Cassette) and Colossus Chess (disk), new at half price £6 each. Phone 0702 520624.

Commodore 1526 (MPS802) Dot Matrix. Printer bargain, £225. Commodore dual disk drive 3040 Slight fault. Offers to David, Tel. Hornchurch (040-24) 55733. Evenings and weekends

MPS801 Printer for VIC or CBM 64 unused condition, £140 Ring 0203 490527. evenings

Monitor — Audiogenic machine code monitor plus Centronics interface for the VIC 20 on cartridge! Normally £19.95. But only £10.00 o.n.o. Contact Paul Bradley, 2 Jones Street, Birtley, Tyne and Wear.

CBM 64 Software Depth Charge, £3.90; Sooper Froot, £3.90; Arcadia, £4.00; Falcon Patrol, £4.00; 64-tape, Computing No. 1,2, £1.50 each; VIC20 Jetpack, £3.00; Cosmic Battle, £1.50; Crazy Kong, £4.50. Maths 1, £6.90. All original. Contact C. Duncan, 10 Chestnut Grove, B'ton, Northwich, Cheshire.

C64 software for sale. Manic Miner, Gridtrap, Beach Head, Hustler, Flight Path, £5 each or buy all together for £23. Phone (0348) 872216 and ask for Stuart.

Arrow 64 and Diary 64 cartridges wanted also Stack Motherboard. Details to L. Garratt, 98 Victoria Road, Eccleshill, Bradford BD2 2DD.

CBM games for sale, £2.50. Cartridges, £4.00; Utility, £4.00; VIC 20 cassettes and Utility for £2.00. Send for free list (SAE). To S. Findlay, 297 Blackwell, Carlisle, Cumbria CA2 4RW or Tel: 33694.

CBM 64 software to sell American and British over 300 titles at reasonable rates. Popeye, Gyuss, Starwars. Phone 0462 59460 after 5pm or PO Box 27, Hitchin, Herts. Ask Ravinder.

CBM 64, cassette unit, cover, programmers manuals. Software including Hobbit and book. Plus lots of Mags. Bargain at £200. Ring Seamus, 582-1158 (6pm-8pm)

Commodore 1520 printer plotter. Boxed — as new. Only used once. Still under guarantee. £169.99 new. Bargain at £85. Gray, 35 Gordon Avenue, Prestatyn, Clwyd.

1520 Printer Plotter for sale. Excellent condition, under guarantee and complete including extra paper and pens only £65 inc. p&p and insurance. Also CBM 64 software including Manic Miner, Twin Kingdom Valley, Stellar Triumph, Attack of Mutant Camels, Revenge of Mutant Camels, Wallie in Rhymeland, Quest of Merravid all originals just £4 each. Write: John Twiddy, 65 Holly Avenue, Wallsend, Tyne & Wear

VIC20 starter pack, 16K expansion programmers aid, Super expander, M/C. Code Monitor, Stack Motherboards, 8 games cartridges, tape software and utilities, £50 of Books. £220 o.n.o. J. Adams 0274 682227

VIC 20 C2N recorder 16K, switchable rampack, 20 games. All for £200. Tel: 0727 25597. Ask for Neil after 5pm.

VIC20 8/16K Hi-Res Drawing (without Super Expander). 176 X 160 pixels. Draw (m/c), Point (m/c), Circle, Ellipse, Spiral, Triangle, Square, Joystick functions. Store Drawings on tape, 1520 printer, and in memory (16K). Tape with Machinecode Routines, Demo Programs, sample Drawings/Maps, plus instructions for £2.50 from. A. Blomberg, 134 Aldebury Road, Maidenhead SL(7)HE.

VIC20 +8K Cassette Recorder Motherboard, Joystick programmer's aid cartridge, Sargon Chess, introduction to Basic Parts One and Two, Matrix, Vegas, Jackpot. Many other games and mags. £100 the lot. 01-651 1630.

Wanted CBM 64 and if possible C2N. Will pay about £120. Contact Simon Weaver, Wych Farm, Burton Road, Bridport, Dorset DT6 4PS. Telephone: Bridport 22427.

VIC20 stack storeboard with 16K expansion and VicKit 2, VIC20 games including Defender, Invader Fall, Missile Commander, Frogger, Cosmooids, Asteroids, Gridrunner and Laserzone. Also an introductory to Basic Part 1 with tapes. Also other books for the VIC20. Cost £140 new. New will offer £80 o.n.o. Tel: Scarborough (0723) 372275 for more details

CBM 64 software original game programs. Must be cleared (s hand) average cost £8.00. Send S.A.E. for list (1=£6, 2=£11, 5=£25) to - S. Butcher, Clarefoot, Moffat, Dumfriesshire, Scotland.

SX64 New, not suitable for requirements. Will sacrifice for £490. Write: 7 Thorn Grove, Hale, Cheshire WA15 9AW or 'phone 061 941 3102.

VIC20 starter pack plus £100 worth software, 7 cartridges, cassettes etc. Intro to Programming 1 and 2, sell for £100 o.n.o. K. Cruickshank, 46 College View, Esh Winning, Durham, DH7 9AB. Tel: 734 888.

All brand new CBM64 computer, £150. Printer MPS802, £290. Disk drive 1541, £170 with software. Tel: 01-886 3268, evenings.

If you are a CBM64 user with disk drive you are invited to join Club64 the international user group. On joining every member may order free of charge 3 disks from our excellent software library. Annual membership ... £12 UK and Ireland, £15 Mainland Europe and £20 all other countries. Further details from Brendan Conroy Club64, 85 Uppr. Drumcondra Road, Dublin 9, Ireland

AT LAST... A MAGAZINE GEARED ESPECIALLY FOR THE QL USER. SUPRISINGLY ITS CALLED QL USER.

For the latest information on every QL hardware and software release, turn to QL USER. Every month we review the latest games, educational and business packages, together with program listings, book reviews and your readers' letters. Plus, of course, hints and tips on how to get the most from your QL. If you're a QL user, choose the magazine written exclusively for your machine — QL USER. Available from all good newsagents.

DON'T VAT THE PRESS

There are strong reasons to believe the Chancellor of the Exchequer is planning to impose VAT on your magazine.

Such a move would turn the clock back 130 years — the last tax on newspapers and journals was repealed in 1855. Since then 'No tax on knowledge' has been a principle agreed by all Governments, even in the darkest days of war.

A free Press is a tax-free Press.

No Government should be given the power to impose financial pressure on a Press it may not like.

Tell your MP to say 'NO' to any tax on reading.

Issued by the Periodical Publishers Association, London

Learning to Cope

Learning To Cope is an annual publication compiled by journalists on Educational Computing with five years' experience in the field of education and high technology. The third issue of Learning To Cope deals with all aspects of computers in special education.

This issue gives information on the latest developments in hardware and special aids designed and adapted for physically and mentally handicapped children and adults. The progress made with micro-electronic devices helps create independence for all who use them.

A large proportion of Learning To Cope is dedicated to software, with a catalogue listing all the specially designed programs for children and adults with specific needs. It also includes a comprehensive software reviews section which examines how programs can be used as teaching and learning aids across a wide range of subjects. Computer applications are illustrated through case studies covering such topics as computers and the blind and how computers can help to stimulate mentally handicapped children.

Learning To Cope is the only publication which deals in depth with computers in special education. It offers practical advice and guidance as well as pages of useful information and contacts. It is something you cannot afford to miss if you are at all connected with the teaching of children and adults with special educational needs.

Please send me a copy of Learning To Cope — Computers in Special Education.

I enclose a cheque/postal order made payable to Educational Computing for £2 (including P & P). Discounts are available on bulk orders — contact the editorial office on 01-251 6222 ext. 2475.

THE
COMPOSITE
& TRANS-DOMI
SOFTWARE COSTS

COMPOSITE
USE

The Complete Commodore Software Guide is the most comprehensive software guide ever published for the Commodore 64 and VIC 63.

Although most of the pages of the Guide refer to 64 software there is plenty of information for VIC owners as well.

The guide is a ideal way of finding out what is available for your computer, how much it costs, and what our panel of experts think of it. Every conceivable type of software is included in the guide. Whether it's business, education, or games you are interested in, the Complete Software Guide is the place to start. There are also a couple of categories of software that you hadn't even thought of.

Keep your Software Guide in a safe place. You will find it an invaluable reference.

KEY TO SYMBOLS

The symbols in this Software Guide are designed to help you grasp the important information about a piece of software at a glance. The forest symbols are self explanatory representing either cassette, cartridge, or disk.

The computer flag symbol represents file/d devices. Most good software for the Commodore 64 now uses one of these techniques. It is an important consideration when buying software for your 64 as obviously a piece of software that takes a page to load is destined to end up in the back of a drawer.

Star have been awarded to pieces of software that have regarded as classics. You will find a few of these in every section.

Certain sections have their own special lead symbols. The five star section has five letter symbols. These stand for G = Graphics, T = Text, B = Beginners, I = Intermediate and A = Advanced.

CONTENTS

Games Page 3

Our games section lists over thirty hundred games for the VIC 63 and 64. Whether it's a maze, or platform, or the shoot 'em up that takes your fancy we have covered it all.

Some of our games section. Star ratings programs have also been covered like Flight, Football, and Basketball and even a slightly more card game simulation, called - Strip-Clear.

Adventure Page 10

There is more to adventure than goblins, elves, and the standard dragons and deep sea scenarios. Our adventure section includes information on the very latest game titles: Beasts from Within, an adventure based on the classic Arthur C. Clarke novel; Quest for the Immortal; Spoken and the Incredible Walk; and the old classic like the Hobbit. Adventure is all and the Count!

Business Page 15

Get a printer for your 64. You can add a disk drive and you have a system that runs a computer. The business software titles available for the 64 have been quite big and becoming more the last few months. In

the excellent mail-up Karl DeLia takes you through the four main types of business software - Word Processors, Data Base, Spread Sheets, and Accounts packages. If you own a small business, or just work in one, you can be using your 64 to make life easier and more productive.

Programming Page 27

The 64 may make the easiest computer to program in it is one of the best. There is now a wealth of programming software available for the 64 from the simplest of Games Designers to sophisticated

language like Pascal, Fort, and Logo. There are also a lot of tools like Assembler, and compilers. Your Software Guide has several programs

Education Page 38

The computer is being used increasingly as an education tool. Not just something to learn how to program on but also a machine to help you with your biology 'O' level. Learn Pascal, or even improve your

driving. The education software industry is now one of the fastest growing parts of the computer business. Dozens of programs are included in this section, and a lot that several more will be launched this year. Find out what is available in our Education section.

Miscellaneous Page 44

The new type of software, Software to use around the house. Our HomeSoft section includes information on music synthesizers, home accounts packages, game designers, and even a piece of

software to aid your housework.

GAMES

The 64 is now established as the world's number one games computer.

Here are the days when games were launched first on the Spectrum and then converted to the 64 months later — almost as an after thought.

The best solutions houses are now launching 64 games simultaneously with the Spectrum games or even launching the 64 game first.

Of the games that have been launched together the 64 versions are head and shoulders above their Spectrum counterparts.

Discussions is the best recent example — though you can probably think of dozens of others.

If you don't find your all-time favourite in the Guide write to us and let us know. With so many good games now on the 64 we could fill this booklet three times over. Now there's a thought!

ARCADE GAMES

FOR THE 64

ALIEN IN WOOD LAND

Adventure
£8.95 (cart)
£12.95 (disk)

Monsters beware! — especially the five snakes with as many whiskers! Four groups of gentle woods with the gentle woods with the gentle woods — well worth having as an example of the programmer's art. The great game play is worth enough but it is

the interaction of the complex and music which occupied attention.

ANTI ATTACK
Adventure
£8.95

Everyone will be impressed by the "add-tooled" 3D architecture of the edge of numerous stages — quite unexplained some of them. Each scene can be viewed from FOUR ANGLES at any time. Run the game, remove them, exploring a few levels on the way to winning victory. Not too realistic game play.

APACHE RAID
Strategy
£1.99

This is a strategy-only version of **Apache** — **INDIAN ATTACK** which was good value.

ARMADA 3000
Microslut
£8.95

Another spin-off of **ROBOP-RITE** based robotic fighters come off the line. It is a player may give battle. Among a **CRON-RITE** has more going for it with it's multicolor — made strategy.

ARCHER
Adventure
£11.95 (cart)
£14.95 (disk)

Archer is a brilliant strategy game based on chess. There are pieces with different powers, squares to move into and an opponent to beat. The ordinary chess is very to compare.

Once you've decided where to move, the screen switches to an action battlefield where you have to fight for the advantage.

The pieces include pions, knights, bishops and rooks. They take on the functions of pawns and pawns. They can split, shoot and destroy and they can attack other's ships or the light continues.

It's highly complex and demands great concentration.

You can play the computer or a friend.

ASTRO CHASE
Adventure
£8.95 (cart)
£10.95 (disk)

An award-winning space shot that can give you the thrill. Magnetic mine or bombs in on the field but you need to be a combination of the galaxy occasionally to take up energy supplies or to bring out other, unexplained. A change of various strategies to launch you. There may be reward. If you have your skills on, or speed. Certain strategies reward the success. Strategy.

BEACH HEAD
B.S. Game
£3.95 (cart)
£74.95 (disk)

Surprisingly realistic war simulation — you simulate for yourself. An award (substantial, impressive graphic representation with realistic combat to make anyone who worry. It shows why into battle-making your way through when time strategy game master in a world strategy that some your tanks through land delivery. Play by the way the distance of the mountain. Good quality — a standard error.

BLUE MAX
B.S. Game
£8.95 (cart)
£14.95 (disk)

World War I with you are trying a machine. This account of war and capture the enemy in a dangerously exciting, 3D, short-to-medium combat arena. Some of the military equipment including some small parts and vehicles are likely targets. Very colorful and packed with detail.

BONZO
Action
£7.95

BONZO'S MUCKER
Adventure
£8.95

Super Mouse, after Bonzo has shown into the main den and is making full use of the team. Bonzo, after Bonzo and Bonzo to make the evil. Bonzo to be shown them of their 3D action game. The clear line to go to make better. A screen portrayed by silly characters. Soft, made for.

BOULDER DASH
Adventure
£8.95 (cart)
£10.95 (disk)

An American smash. Appreciate the effects of activity as you remove earth and shift boulders to get at the diamonds — you may be crushed. The game features 3D action of a way to deal with increasing limited screen. Many problems to solve but all with a common theme — collecting and CREATING diamonds. Two-part development feature.

BOB'S NIGHT OUT
Action
£8.95 (cart)
£8.95 (disk)

A fun game involving round a progressively wider machine and first using typical game. 3D action game with progress game and review to avoid. Progress game keep the game to the money. Nighttime Park has a population of many machines — in a variety of ways in the game. Time to go play.

BOMBLEE
Adventure
£8.95 (cart)
£10.95 (disk)

Once it's become a part of collecting in this computer game. It is a game by means through it being on the way to the main feature. **BOY CRAZY PRINTER**, the presentation is very attractive. The **Wanderer's Guide** is required throughout the game.

BONZO'S MUCKER
Adventure
£8.95

A three stick car race with water jumps aplenty. Knock the other racers off the track to score points. Lunge into the narrow sections and pick up speed to jump over chasms of water. Visually the same as **STAMPED HORSES**.

 **CAN-STRIPPED**
Mirror Ball
\$9.95

A multi-faced **DETRACTOR** game where the cooler it's are encouraged to build a location as efficient as a building while dodging helicopters. Goal of floors completed as intelligent game. Weather actual disasters and triumph.

 **CAVE FIGHTER**
Bottle Job
\$9.95

Awful yourself! It's time and late leap through 28 alien-infested caves. Climb upon chest aliens and ease through near steep cliff exposures. A jump-stick is essential equipment. It sure you mounting your head.

 **COVERS OF KALAFKA**
B.S. Gold
\$9.95 (game)
\$14.95 (disk)

An atmosphere. A way working wizard adventure with a great ending! Make light of late pile forming towers, energy crystals and a redwood jagged rocks as you search for five magic seeds which will aid you across to the Egyptian tomb where you must battle a face with the sphinx.

 **CHARTERER**
Allyssa
\$9.95 (game)
\$12.95 (disk)

Five good games on the **IBM** **Blazer** - medium type. **Eight** **Empire** - beat the bank (use the egg player). **Golden** **Walt** - pick your way through caves and pop light bulbs. **Prize** **Planet** - six holes in trap rooms. **Requiem** - this is **CHARTERER**. **Requiem** value.

 **CHOC-A-BLOC-CHARLIE**
Ludicrous
\$9.95

A way tricky block-pulling game. Collect four magic purple blocks to form a doorway to the next screen. To do so is a minimalist. Accelerates position-in the game and the support of wings of the jet roller after. The second screen is a puzzle of rotating wheels. Very smart.

 **Chaplain!**
Archives
\$9.95 (game)
\$12.95 (disk)

East of Potomac and south of Hudson lies the **Democrat Empire** - the historical battles for several Abolitionist action programs.

The **Imperialistic** **Bayle** **game** (unpublished) is a 64 computer to the U.S. **Confession** on France and **Child** **Revolving**.

It's a year job to get there - without causing death and destruction.

 **CHUCKIE OGG**
A & B Software
\$9.95

A 256 level platform super-robotic world. Collect the eggs and cure but avoid the ducklings. **Mr. Mouse** breaks into an oval area making life very hard. **Admission** to the screen, but how I wish you could skip the first few screens.

 **COSMIC COMMANDS**
Amiga
\$9.95

Set in a futuristic shooting gallery with a perspective effect. There are three zones with five levels of play. Ideally use a **Shock Light Rifle**. **Warning** - this is **CHARTERER**!

 **CRAZY BALLON**
Software Projects
\$7.95

Guide mobility but air balloons through 25 circuits, endeavoring all contact with sharp edges and flying mice - plus. There are great magnets to pull back the gravity and swing a devilish tight rope.

 **CRAZY KING**
Supernat
\$9.95

Four screens (who can get past screen 1?) of barrel omnidirectional leaping for avoiding 88 bar-plug, ladder climbing obstacles. This version is very brightly colored.

 **CYTHON ENTERS THE**
TUNERS OF COON
Microdeal
\$9.95

An **arcade** adventure with over 100 chambers to scramble through. Keep your perspective of traps topped up - they freeze the screen - pink up keys to collect the next chamber with an **infinite** supply of oxygen and gas reserves. **Practice** to work out and dead eye stonings most.

 **CYTHON IN SPACE**
Microdeal
\$9.95

Fly your greedy "dogma car" to grab fuel pods from platforms and refill your nuclear ship. There then follows a "grid and gridler" screen. **Alert** to dodge the whirling disks in both cases. Special game play: **throw** in.

 **CYTHON**
Amiga
\$7.95

200 screens with robot bosses, **hounding** **beasties**, **scoring** **two** **pyramids** - one to move - the other to fire, **allowing** **both** **functions** **CAN** **be** **combined** **in** **one** **stick**, **instananeous** **large** **shield** **forms** **each** **with** **different** **functions** **and** **very** **colorful** **screen** **display**. **Extremely** **tough** **and** **demanding** - it really does need a **mass** **effort**.

 **Devils Multiple Mugs**
Archives
\$9.95 (game)
\$12.95 (disk)

An **action** **adventure** **arcade** **game** **program** **for** **1-4** **players**. **You're** **not** **just** **clipping** **control** - **trapper** **action** **rollers**, **multiple** **ball** **play** **and** - **if** **you** **get** **too** **overly** **easy** - **kill**!

All the **tricks** **of** **a** **classic** **pinball** **machine** **with** **some** **very** **special**, **special** **effects** **and** **with** **colorful** **graphics**.

 **DEATH LION**
Archives
\$9.95

Archives' **Death** **Lion** **is** **what** **the** **purest** **sports** **simulation** **has** **ever** **done** **for** **their** **name**. **Graphically** **the** **game** **is** **less** **concern** **to** **the** **action** **game**. **Track** **and** **Field** **stars** **Osborn's** **Demolition** **but** **in** **the** **possibility** **stars**. **Archives'** **program** **contains** **the** **special** **tricks** **and** **tricks**.

Like **most** **sports** **games** **you** **will** **get** **through** **a** **couple** **of** **parties** **before** **you** **have** **mastered** **the** **game** **it** **is** **an** **amusement** **for** **two** **on** **three** **pyramids** **to** **look** **at** **a** **fortnight** **because** **of** **the** **punishing** **beatdown** **they** **receive**.

Our **choice** **for** **the** **best** **athletic** **simulation** **for** **the** **Commander** **is**.

 **DE FRODO**
Amiga
\$14.95

The **pre-well** **top** **of** **the** **book** **version** **Commander** **in** **every** **way** - **but** **I** **prefer** **the** **graphics** **to** **COMMANDER**. **Battle** **with** **leaders**, **enemies** **in** **the** **game**, **game** **reactions** **and** **tricks** **to** **you**, **putting** **cells** **some** **time** **to** **reverse** **the** **game**.

 **DE FRODO**
CBI
\$7.95

An **interesting** **simulation** **of** **it** **is** **the** **most** **used** **by** **using** **the** **large** **INPUT** **mechanism** **which** **CAN** **give** **you** **to** **the** **devoted** **EXCEL** **PRO**

START: That's part up to four players can test their skill of gambling by seeing who can lose the least. Place your bets.

RIK'S DIAMONDS
Risks
£2.95

A suspenseful gambling game two players can test their skill of trying to retrieve a hoard of diamonds. Display one of a face in the center of the screen on Tricky stuff.

SINK DDD
Software Progress
£7.95

Put your wits across a triangle of nightmare characters all adding their own weird way. Get hold of your piece of milk when you start at the screen. But any character that goes into the milk means you've lost.

ENCOUNTER
Mega
£2.95

A pilot's-eye view of close encounters in psychedelic space corridors. Meet one of several bizarre monsters and taking time-based craft. Good 3D graphics, especially so when planets begin to stream towards you. Close though it looks behind the cockpit there can be a better scene to arrive at the next level.

FALCON PATROL
Risks
£2.95

Meet the "Warrior" group of flying technology. They can your skills in front and kill making strength. The initial successes are by groups of three - but soon you are facing flights of five fighter bombers. Annoying but need experimenting via the leading edge with the ever-present threat of enemy radar. Scrolling screen, perspective illustrations and effective graphics.

FALCON PATROL II
Risks
£2.95

This time round the VTOL has to engage three types of helicopters as well as fleet fighters and radar systems. In Flying in the most vulnerable time has nothing is easy. Don't forget enemy scrolling by explicit instructions in the game - so no excuses! Better than the original.

FELIX IN THE FACTORY
Mega Power
£2.95 (game)
£2.95 (disk)

Top up the generator with oil. Leap over the people on the conveyor belt, walk the ladder ledge or escape the perimeter and the Felix's side needs out for the net. Un-serving source creates a feeling of panic. Wouldn't go out of my way to log it.

FLUENTIA PILOT
Digital Integrations
£2.95

Digital Integrations started their way into the big league of software houses with two big hit games in flight 88 - Night Countdown. Fluentia Pilot.

Of the two games, Fluentia Pilot was especially more successful. It's a flight simulation with a strong flavor of World War II.

As well as being an eye in of the corner, controls the player has to deal with hostile surrounding in those above and below.

FIRE BLAST
The Edge
£2.95

A series of un-related, unrelated experiences focusing on 3D's effects to acquire FIRE. The course may include all the peripherals associated with the game mode while everyone will appreciate the discrete music. Familiar music returns through together with a class of flying.

FLIGHT PATH 747
Aiming
£2.95

This flight simulation puts you in the driving seat of a 747 while you have to pilot over a mountain range and land safely at your final destination.

The staller is difficult to control at first. You have to keep one hand on the joystick and the other on the keyboard to control the speed, carriage and flap etc. But with a bit of practice and a cool head you'll soon be flying.

The ship comes with a fairly helpful instructor booklet which could have been better written.

747 is a reasonable simulation which has the added bonus of being one of the best games I've heard of in the 88.

FOOTBALL MANAGER
Addictive Games
£7.95

Addictive Games is probably the only software company to Britain that has been able to survive for the success of only one game during the last 12 months. This remarkable game is Football Manager.

It differs from most football simulations by placing you as the coach of the team's manager instead of one of the players. You have to make sure you buy the right players without spending too much money. And if you train happens to get relegated, the director will give you your marching orders.

A good game in its day but a little disappointing.

FORBIDDEN FOREST
Addictive
£2.95 (game)
£12.95 (disk)

Show us what CAN be done with the 88. Help the writer overcome maze traps - enemy decisions of the battle world. Light the spots in the darkness depths, disappear the rocks in the maze while you the final test while the lightning flashes. Moody sound superb lighting effects and 3D scrolling, an exper-

FORT APOGEE
S.S. Gold
£2.95 (game)
£14.95 (disk)

Mega - your shipper through scrolling cave scenery with the aid of radar display. Better - eight people from the first level. Travel through the character and some with solid blocks, pick up fuel then travel to the next level with another eight planets. Can you take them away the 88?

FANTASTIC FRIGATE
Addictive
£2.95 (game)
£12.95 (disk)

This leader - more game of the different levels to ensure the frigate collecting costs become too easy. Three-point stars enhance a challenging maneuver which demands a strategic approach - learn the movements of individual stars.

FRED
Addictive
£2.95

Explosive the catamount through to Egyptian hotel plan too. Scroll the screen to four decisions in you click upon design and depth, pick up bonus treasures, shoot enemies, plants and starlets. Pick up more bullets and manufacture a machine that open the exit.

FIREFLY
Mega Power
£2.95 (game)
£2.95 (disk)

Basically this is STX with high-tech music. Only two colors red and green are used but the enemy illustrations and primary particles increase in number with the level of play. The rules are the same as the Super Ball game except that 50% of the screen has to be cleared OR you're to be the STX by emptying out to a new flooding with

color. Very slick presentation.

GALAXY
Amiga
£7.95 (new)
£9.95 (disk)

GALAXYCOMB with the ability to deactivate the battle fleets. As they are forming, 300 screens with images from space are added. The author says they are almost to "leave you up" - however if your best laser blaster destroys the relevant author ship, you can double the power. Very good.

ILLUSION GAME
C64
£7.95

Nothing wrong with the idea but the implementation is terrible. For example when your three computers happens they appear on the opposite side of the screen. For those interested you are required to pick up insurance from the red and deal with the various opponent escapes. The sound is dated.

ORACLE II
Microdeal
£9.95

The screen of double - more action. You may switch from one table as you attempt to solve the table in the central reservation. Some screens - also free - more time as a while. Good game - good price.

ORI ORI AP
Sunlink
£9.95

Play your speedy trip across the landscape with care as you race to defeat the bumble. You need to have a clear path to the next time bomb. However be careful to check and listen that to pick up. A fast action tactical game.

ORI ORI AP
Sunlink
£9.95

Omiga grid, eyes drift-pulse and yellow code consisting to release white number a colorful scene for post great attention to operate in. You can hear the invaders speak inside the general computer to come for the point to give to you for deadly code. Usually fast learning - NEVER to be confused.

QUARIAN ALIENS
£7.95

A full featured implementation of the arcade stage hit - defender leaders, multiple, features, weapons and mid levels they are quite ready to take you on. If you only buy one space game it must be DEFENDER. This version will give you through - hard to beat.

QYRDPRO
Tactical
£9.95 (new)
£9.95 (disk)

Two screens of space combat. If you can hurry around the rim of your middle ship and blow the LPCs up down to the stars planet and ship supplies, it's more massive with a local gun. On your return, complete the installation process. This also destroys the ship planet then game on to 2 more situations with different space ships, to complete the mission.

HANDICAP GOLF CBI
£7.95

The best, most user friendly golf simulation I have seen. 100% of code to take care of all the variables such as wind speed and direction, choice of clubs, angle of shot and the 18th hole. You walk across the course, taking note of the bunkers and other obstacles.

HARD HAT MIK
AmigaSoft
£9.95 (new)
£12.95 (disk)

Life as tough as the construction site. All you've got to do is

complete the building - but there are one or two obstacles, like the neighborhood peeps, building regulations, and falling bodies.

The peeps don't like what you're doing on their street, and they'll stop you any way that they can. The building inspector is looking for any reason to close down the site. And don't forget - falling bodies can cause a lot of damage!

There are six levels - and stills what you'll need plenty of!

RAVOC
Dynamite
£9.95

Good 3D graphics with diagonal scrolling. Spares through gaps in towers, variously sized walls as you direct an interceptor to a weak of cross-missile. Missiles miss and smart bombs make a difficult game. Virtually impossible on the attack waves from explosions, but you better and better. Good in a nutshell.

HEATHROW AIR TRAFFIC CONTROL
Mosaic Computers
£7.95

As the title suggests, this is a "wordle" program. Announcements of the planes are read in order to be "on top" of the 3-part screen display. There is a radar screen, a stack display which tabulates relevant info and the screen's being held around the four corners, each panel for sending information, radio messages to levels, includes a time mode. Relatively easy.

HELL GATE
Linnsoft
£9.95

For all those with acute nervous control. Control a battery of four great moving around a box. Pinned the wrapping in align with circles of laser walls but try to avoid the more subtle behaviour of alien forms. Beware of the pods and pretax, pretax, pretax! Automatic maintenance!

HIPHIT
Amiga
£7.95 (new)
£9.95 (disk)

High down order to help eventually clearing the ground's color completely. Destroy a only enemy and two bonus balls with a single in space navigation in it.

HIGHNOON
Duan
£9.95

A full perspective shoot-out western style which allows you to hide in the back or witness forward the battle from robbing the bank and shooting the women. Screen of action with dramatic and slow respect for those in the back. The climax is a showdown on the floor in the wall.

HOOPLA
Celan
£1.95

Cray Printer is designed to run away from the screen as you can every week and control of a job. Further more on this version has covered an enjoyable game.

HOUSE OF USHER
Amiga
£7.95 (new)
£9.95 (disk)

Before you get to the treasure chamber and the mystery rooms there's the real matter of what rooms to pass through. Each has its own set of eight impossible puzzles to overcome. The route may be selected as well, making you to keep playing, every time you get it right. They far exceeds in need of an ending. The proud person cannot help enemies and company surviving.

HUSH HOVVER
Linnsoft
£1.95 (new)
£9.95 (disk)

An original chess game, you've borrowed a neighbor's mower? Or want a bank, there's a sophisticated strategy around, the professor is very likely should you step on his favored River bank and there's a great lesson to learn before nightfall! Quality game.

HUNCHBACK II
Games
E7 88

A platform game gives a distinctive treatment. Acrobatic levitation control and the Openroads with athletic maneuvers. Work through five stages, picking up small balls to save the right to make the last one past Japan, India and moving platforms help you get above the bats, over the lava, leaping across hills and electronic machinery are a definite challenge.

HUSTLER
Double-Dee
E8 88

Six variations of pool to provide endless entertainment for the non-expert, six time modes! One of my favorite programs featuring all the problems and levels of physics associated with the actual game. You don't need experience of the real thing to actually play.

INDIAN ATTEND
Auriga
E7 88

Written for the Black Light Ride with allowance for a system. The setting is a big cabin with six partners trapped inside about the outside off of their homes as they race past their people to reject the attacking party. Best with the rifle.

JAMMIN'
Tasker
E8 88 (rent)
E7 88 (Aust)

Exceptional level made in a very unusual game that has you collecting unusual items

made from 28 "Lords" - eight lords each equipped with moving pavements. Unusual and very descriptive well written logbook.

JET-POWER JACK
Microspace
E8 88 (rent)
E8 88 (Aust)

Five stages of delicate maneuvering demanded as you separate space artifacts pointed by redline signals. Work your way from one side to the other, then back again, leaving picked up a Fuel pod. Visually everything is done in the back.

JET SET WOLF
Software Projects
E7 88

There is a nice assembly puzzle protection code with full program which runs of course, very popular on the Spectrum. Not too keen on the graphics but the game has plenty of other to make yourself happy. Wolf must collect all the debris from a bomb before he returns. This entails avoiding ALL of his vast arsenal and surrounding trap barriers.

JOHN GENE
Microzap
E8 88

An Amibler night eye with a short up on the line search followed by 3 hours of action scenes, where ultimately you rescue a captive who will tell you the willpower in a (or O.K. on the first five stages) but hardly easy.

JOHN MY BAE
Lambert
E8 88

A WAR GAME focusing on the American Civil War - one small section. It is possible to see the upper hand in the battle for a river crossing. Position your army, take by and military then command to take back. The actual battlefield conditions vary with each action. Develop skill in maneuvering your forces.

JUMPIN' JACK
Sunsoft
E8 88

THE "PROOBY" - the other window on double! Full perspective graphics stripes with colors and optional music. As many characters as you could wish to maneuver down by their feet.

KACHTER
Superzap
E8 88

Protect your secret bases from the ravages of swags. Spray the shot about with guns and be ready to avoid the incoming lizard-egg. There is a my only who will attempt to block your/brown. Not bad.

KING OF THE DESERT
U.S. Gold
E8 88

Here's your chance to see how you shape up as a General in a war battle! The pages of history reveal the struggle and failures in Hattin, Saladin, Saladin, Ramon and Van Kildesht's battle in Europe and North Africa.

But with a nice thinking strategy like you find it to control the historical might have different strategy with.

U.S. Gold have released our war games which can allow you to re-write history. Kildesht of the Desert played the British force of Mississippi against the night of Ramon and his Passes Division in the legendary North African campaign of 1099.

Battle for Normandy commences on D-Day June 6th and in minutes the Allied Forces attempt to attack Hitler's Atlantic Wall.

Figure in the game reconstructs the famous battle of the Bulge with 244 the Franco-24th of the 1st Armored by the last possible in a dramatic bid to halt Germany's advancing Allied lines.

KOROTOMI WOLF
E8 88

Another-powered flight is never easy, the obstacle in this program make it a lot harder. Collect all the tokens in a time zone, scrolling above and below ground, to advance in the next zone. Supergraphics will for the non-specialist unless you are prepared to put in a lot of practice.

KONG
Auriga
E7 88

A block action with large characters a big box room to move. Abandon practice is essential with the various forms - jump the barrels, balance two - keep out of the area and avoid the pits. Three - avoid springs and water! Finally - destroy King chair.

KONG STUMBLES BACK
Games
E7 88

A weekly sequel to the much-played favorite. This time KONG has moved to a tropical, so as to attempt a more expert to keep even landing down the faster. Casino, boxing, hole-in-the-hole, are opening up to join in. Colossal monster and good fun for people watching.

LASER ZONE
Unisoft
E8 88

As the VIC version but with laser defined multicolor graphics and a large pool of enemies to overcome. Considered for the attacking mode too. This game allows for a variation of play - the completed low player team effect is great. This suggests could be an otherwise frustration will simply.

LATH JONES
Terminal
E7 88

Half Jones dodge his fatal injury and seek all into a fifty-run when he can play video games. There's a more to most of the 88 copies, played into Ray Chew & Co.

Each radar panel will rapping them from the safety of a space ship. You'll have a laser beam aimed for the other combat. All four planets must be purified before Super Attack commencing.

BARRIERS IN THE UNDERWORLD
Shooting
\$9.95

ATALL, designed by Intersoft/Byte and featuring the **GAME-GYM** 100 screen of rolling landscapes. Fine graphic-palette, seven flying birds and 300000 below ground. Walk up the treasure and gain reinforcement in outlying regions - a top and bottom support reinforcing points.

ONE ON ONE
Amusement
\$9.95 (game)
\$12.95 (disk)

Sports simulations have always proved the most difficult games to make playable on a computer. Hardly any with the possible exception of International Soccer, have managed to capture the atmosphere and tension of a real sporting event and to maintain the fine control and maneuverability that is vital in this sort of game.

One on One, an American Basketball game, goes like as one of that type - the convincing sports simulation.

It was designed and written with the help of Larry Bird and John Irving, two of the NBA's best Basketball players. And it shows.

Each of the players' characteristics has to be modified on either Bird or Irving. So depending on which of the two you choose, your shooting and defending abilities will be different.

MURDERY NIGHTMARE
Cable Software
\$1.99

Try not to let the baby crawl to the ground as you set off in search of milk - only stay the moving mammy game play which which creeps down and returns in the higher levels. Oh yes, the milk starts to sludge about too. Beware!

Baby is crawling! Beware!

OUTBACK 64
Puzzle
£7.95

Protect the baby kangaroo from the descending swagmen. Zip up and down a pulley system peering the would-be sidestep balloons watching out for their locomotive. Screen two has you rapping predators while on the last level the swagmen are floating downwards along to push a rock on your head. Good sense.

OPERATION OVERSIGHT
Amusement
£11.95 (game)
£14.95 (disk)

You're commander of a World War Two commando task force with the objective of occupying a city 15 Km and two rivers away.

The enemy - and the terrain - are very hostile. You need a skilful combination of action and strategy to secure your goal.

With four skill levels an individual game can last up to three hours.

PARKS
Amusement
\$9.95

In this **WALK GAME** you direct a small group of people (and all) with the object of getting them up a hill. The response your own group are released with that combination for the two tasks in hand. They are not - but are short version with ten levels of play. Plenty to consider.

P.C. PUZZ
Amusement
£3.95

A 3D street-scene game to which the copper on the motorcycle takes the villain and recovers the lost copywriting. The treasure as a bonus. Oh yes, the hero has to avoid drink on cycles, parks on pop-corn and blowing bombs. Scrolling scenes of course.

PINDON
Miscellaneous
£4.95

This time you get not only the availability for a **PRINCEY** location. You get a new theory for an accomplice. You can buy letters.

PINKY PAINTER
Super Soft
\$9.95

The best Crazy Painter? For the painter as you travel round the grid clearing away the paint from the squares. When all the squares have changed colour particles of the same color before you change to a new paint brush. This time round each square differentiated by half applies previously painted one - maybe? Very good music.

PITCH
Amusement
\$9.95 (game)
£9.95 (disk)

Currently the best 'Take Some' version of Tennis. Posing, accompanies your attempts at making the double-doubles with its blocks, destroy their step too. Make use of the elevated perimeter fence to stop them and find time to hit up 3 demands for the all important bonus. Pleasant graphics.

PILOT 64
Action
£2.95

Pilot 64 comes with some impressive controls. It was written by a pilot and based on a real aircraft - the **Lexander 454** - which you must fly and land at a simulated Peritoth airport.

You are the only developer of the team of early game to fly a virtual world. However, negotiating various hazards - including military air force.

The instrumentation is the most impressive thing about the game - which has opportunity to have you and fly pilot for its accuracy.

Control Pilot 64 has a variety of the same class to take Flight

or Flight 747 when it comes to playability. Pilot may like it but I'm afraid for this review Pilot 64 will remain unexcited.

PUMPS CRAZY
Amusement
£2.95

Plumb-it-a pressure-releasing system to a balance boiler, using various flow joints and straight lengths. Make your own through one. Consider-erious control using the limited supply of dynamic equipment. There is a time limit of course and a referee (short from Beach Max to judge you).

POSTER PASTER
Amusement
\$9.95 (game)
£9.95 (disk)

Feels up 30 advertising boards, legs and dent with workable, carefully constructed. You have to reach the right section of the ad and fit it in the corner of position after it won't stick. Well, damn, almost none - original idea - complete play.

PULP WARRIOR
Amusement
\$9.95

A solid feature of the highest order. Superb perspective graphics, controlled only by the degree of control you are able to exercise over the character on the lower stage board. The task is to maintain through the obstacle and level of a also inhibited by various things - those to see in order to absorb their energy. Getting in power and speed to be desirable in the late of the 100,0000 making use of the newly varied powers of limitation, teleoperation, precise scanning and controlling, for the final observation.

QUAS WAGS
The Edge
£8.95

Quas 1000 odd screens of superb software. Write to explore possibilities, in Quas

with your hand-ruled, left-page thinking demanded here and there and asks you to jump steadily east? You will adhere to the course but will be most interested in finding reestablishments for swapped energy. Kinetic stepping and digital illumination may eventually trouble you to discover the route in the background and follow its primary attributes for locked features of the game.

SINK
Spectrum
£8.95

You are standing in a desert of A's green probably in a nightmare. On either side of the desert is a battle of TIPPON and CRONK. Ink waves crawl across the desert till they reach the other side, where they start changing every few milliseconds rapidly. You may think you know and even the "go faster" button of ink with your connecting fluid. Whenever the ink supply runs out, it goes the next colour of course.

RAID ON BUNGELING MAN
Amsoft
£8.95 (game)
£12.95 (disk)

The Bungeeing are a right! This time they've built the ultimate Bungeeing Machine - it's programmed to cross a chameleon, and only you can stop it.

Now here to destroy the hero: Your hero is fast - but vulnerable. The Bungeeing are waiting with weapons you've never seen before.

'Build On Bungeeing' by Lawrence Phillips is a fast-paced 300" scrolling screen and a parallel for the state with newspaper account of the real.

REVENGE OF THE INSTANT CAMELS
Gemssoft
£7.50 (game)
£9.95 (disk)

Kindred needs education. Split and jump your way through to where of busy time-line. After following a set

distance through the desert, the next will look red in place your stable strength is applied. Plastic time jumps and declines is compulsory with the respect paid to various black formations.

SEARCH OF IMPOSSIBILITY
Amsoft
£8.95 (game)
£12.95 (disk)

You'll need a friend to get you to the deepest part of the desert along with this most appropriate.

All sorts of snakes are out to get you - snakes attack players unless you feed them with "go faster" button.

There are 22 levels for one- and two-player mode.

HACKETT ROVER
Amsoft
£7.95 (game)
£11.95 (disk)

The conviction of your simulation gives you the ability to explore 36 rooms and work out how to create the guide to collect all crystals. Plenty of hidden to surround previous (you only need apply). The four way scrolling window compares to its what is just a round the corner.

REBEL FOR PARAMOUNT
£8.95

Exemplary musical soundtrack in this arcade adventure. Reviewer now digital inheritance from 20 states (not-packed with graphics) most updates and virtually traps. Worlds and levels of speed are you now through.

SAM'S JAM
Amsoft
£8.95

Plenty of good music, but stop. The usual game style is followed with attempts to get past screen one - it may be possible but problems know how in theory you are pe building a jam. Making

down the columns and ending jumps on the side. Can screen do it?

SCRAMBLE
Amsoft
£7.95

A rilly version of the familiar format with six colour-coded screens. Body levels EPIC game not too simple, but city, maze and power base. Good, smooth, easy, able scrolling, including easy.

SCARPER
Softness
£8.95

A very large top-down maze game check about ten up. Except on unfortunate game screen across a busy surface of a health planet. Use your intelligence to start them. Don't be fooled after the 84 are under. Will they reach the house ship? Who care - the action is continuous, inviting an eye leaver over the end of the landscape.

SEE SAW
Distances
£7.95

From a very simple design comes a simple, the answer to that is testing very educational necessity in post classical Dodge about on your see-saw. The energy in the falling character across the water. The great graphics will catch anything - an event a subtle gap in these make fill you now over the state powered on a recent success. Exception because the laws of physics are manipulated by the player - good use of this.

SHEEP IN SPACE
Gemssoft
£7.50 (game)
£9.50 (disk)

SHOOP - MAY LATELY CLASH - if they get the time, as well as smooth, you mean to make or vital objects and keep body and cool together. Stop and start freely alone as you fly and work over your planet's scrolling surface: pro-

vide. GARAGE GAARDING from transporting away to the planets. PLANET SURFER or stage based with special effects.

SHOW JUMPING
CNI
£7.95

If you ENJOY an irritating form of the Year One type it otherwise does this. I found it impossible to judge where I was in relation to the faces - practice would improve this situation. BUT what a wonderful INDIAN! SCROLLING!

SCRAMBLE
Madsen
£8.95

Continued my favourite version of the game with a scrolling frog from a part from the standard screen. Extra, good levels and complex color displays do not distract from the all important task. The ink block can be toggled by keyboard for the game.

SLIPSY
Creative Sparks
£8.95

A quick run-up first change. Inside the blue glow you've your character and out the red zone. Look out for yellow obstacles which give a measure of protection against the creepy creatures in the cave. Close endurance of its completion of only moments before you get caught in a catastrophe!

SHEEP FLIGHT
US Gold
£8.95

A classic flight simulation game for the Commodore 64 which because the best selling program of its type in the United States.

Instead of being given a pilot's eye view, the player can see the plane as it flies making it much easier to learn how to play the game and see which direction you are moving. Unlike the majority of flight sims, Sheep Flight's graphics are excellent, allowing the pilot to get on with the job of

Byes rather than deciphering a maze of lines on a TV set.

A real treat for the casual and flying enthusiasts.

SON OF BLACXER
Alligata
£2.95

Deliverly crafted from the Blaxxer. The action is a window on a massive complex of alien, dead-end maze-disappearing doors, typed walls, elevators, and revolving attackable security obstacles from the spirit's generator. Puntle your way through 12 rooms, collect the keys to escape before the air turns foul. Real-time events flourish in. Practising for double-jointed handiwork.

SQUINTY
Wags
£2.95

Thunderbolt and electron music sets off for an action game with covered gazette to solve it. Pick up and use various objects and patterns to clear your passage in Stronchero. Break part of the mosaic "you it make" and find the word from the pieces on a dark road.

SPACE PILOT
Aiming
£2.95 (game)
£9.95 (disk)

Trade health with 10-planes, prop. Builders jet interception balloons and UFO's. Loop the loop as you down 50 aircraft and wipe out the equal one leader before progression to the next time zone. 4 way wireless and networking sound.

SPEED DUEL
Dix' Tunes
£2.95

In this 3D race on disk, your eye appears to be directly following your own car. There is no real formulae-hunt race on the track; you can distribute the speed (stationary for practice) and enter wheel-to-wheel race with your enemy. The mountains and clouds "move" in response to your steering.

SPOTFIRE ACE
U.S. Gold
£2.95

U.S. Gold also has two other flight simulators in their range apart from Solo Flight and Blue Aces.

In the first Spotfire Ace you see some pilot flying a Royal Marine Spotfire fighter during the late war. The game includes really incredible set of cockpit "gear" these dimensional graphics. Spotfire Ace has two very different missions to choose from, moving from map to aerial A/D up to four players can fly at the same time.

The second U.S. Gold Spotfire, as realistic simulation of the US Air Force most sophisticated bomber. The flight extensive radar surface to air mission ground target bombing and intercept, etc all included.

A third up display - a view from the pilot's eye - coordinate well with the 3D graphics to give a first in a really well-realised simulation.

SPOTFIRE ACE
U.S. Gold
£2.95

An easy to get to grips-with, all action flight simulator to which you pilot the world's most powerful fighter. Near constant maneuver with three difficulty levels. Essential bare instrumentation leaving you to concentrate on flight, steering and respond to your opponents. Though the graphics are "raw-edged" you nevertheless in realistic enough to give the feel of handling the loop and rolling. The enemy can still look to make every shot count if it hits and too fast than evade the heading out option - (auto-tilt) aim to precision.

STAR COMMAND
Sages Soft
£2.95

Smash the pixels from deep space before your enemy is destroyed away. Full frontal 3D action - fire stations and black ships; three craft with your yellow plasma bolts. Del-

ivered attack waves you repel your ship with the energy blocks emitted for good destruction Tough.

STARBASE DEFENSE
Aiming
£2.95

A formation of space craft is hovering above a focus field. Shoot them with your Starblast Rifle, or you might if you're willing a special, as they peel off and transform into bombs. Prevent the destruction of your base and try to keep the military target.

STINK
Sages Soft
£2.95 (game)
£9.95 (disk)

Here in the world of stinky and create a colour pattern to beat! Hypnotic sounds increase from the nearest game as you proceed to claim 75% of the screen. Each time the cursor makes contact with a line means that you have captured a part of the screen which is promptly coloured in. More points and a different colour if you go "stink" mode. Each level makes use of a separate colour scheme. Unusual.

STOCK CAR
Miles Power
£2.95 (game)
£9.95 (disk)

The tracks with 4 cars to create slapping, skidding, bumping action. You just steer and select the correct gear. As much fun as you make it.

STRIKE FORCE
Boulder Box
£2.95

Bound to be compared to Beach Head as it is a war simulation. Blow the city by sending the picture and down helicopters by using and using your gun. Move to the engaging battles on a different screen and finally reveal all enemy ground forces. It's called the law of M.

STRIP POKER
U.S. Gold
£2.95

Strip Poker is the most elegant of a computer version of the card game that everyone has heard of - but few have had the good fortune to play.

The player is challenged to pit his wits and strategy against two beautiful women prize players.

If taken several hours to finish a game, the result is hardly worth looking at unless you have a wild imagination. Personally, I'd advise you to stick at making dirty words up to Scribble.

STRONTIUM DOG
Duckhouse
£2.95

A mutant beauty hunter tries to hunt his way across the bad lands of a two-way planet. Also armed with death beams and time-wary bombs he will need to avoid deadly vegetation apart from out-standing strontium. Various energy sources have to be acquired as he will die and that fact immediately killed to limit of the next character in the game. 1988 A.D.

SUMMER GAMES
Duckhouse
£2.95 (game)
£19.95 (disk)

A cross section of the Olympic games starting with the opening ceremony 44 style. Pole vault, during a 400-meter relay, 100 meter sprint (this is the only short-track, jockey-thick entries in the weight) gymnastics, freestyle swimming relay, 100 meter freestyle and finally short swimming, all using remarkably control functions. Leaving the competitor to perform his skill. The various animations have been thoughtfully composed and arranged to give a top flight simulation for the sporting buff. Eight players may choose to represent any of 10 national and over the relevant national athletes at the events ceremony. Really it's one of the best software.

1
SUPER CRACKER
Tetris
ET 85

An enjoyable "fall-into-the-square" game with two objectives in pursuit, it is said that they are joined by colleagues in the later stages. Right-angled pieces to perform on. To help you, the fire button creates a temporary hole in the grid to deflect your persistent fiery playmate.

SUPER PIPELINE
Tetris
ET 85 (demo)
ET 85 (disk)

Keep the water flowing through the pipes to fill the barrel! Rescue the plumber and protect him from the rain as he battles the blackkeys. Don't deal with the plug droppers, spiders and leeches before they invade as the infatigable Goombas!

SUPER DRAMBLE!
Tetris
ET 85

When background, that's a word! This makes the graphics appear less pixel-fight, section-free bombing run, launching rocks, freezing screens, million stars (could be battery) comes with space outposts, rocket ship (light factory) mine and the target. All stages display unique plays.

SWEEP
Miscellaneous
ET 85 (demo)
ET 85 (disk)

Four kinds of robots (3 types) arranged in a Caladonia and when the top notch requires. The shell will be your joy down creates by but the intro music is mighty fine. Any maze-like that your laser beam fails to interrupt legs on an explosive egg. Finally temporarily restricting your movements. Nice stop action.

TAPPER
U.S. Gold
ET 85 (demo)
ET 85 (disk)

Keep slapping down glasses of liquor in a wacky collection of customers. To satisfy the brewer and get them out of the shop in your case. Almost as fast as you pump out the drinks they slide back - don't let them sneak out of the shop or supply it'll be impossible. From here to later by with four arcade screens each with its own set of characters, some predators, some prey, some guide and some monster. Between screens there's a bonus round. A game that'll be a blast of fun having slacker five-pick the right one for a bonus - the wrong for a half-off of every level unless you're able and avoid.

TACZ
Battle Zone
ET 85

Fight bugs and fancy spaces in an expansive heaven before the advancing walls crush you. Fast gameplay, bonus screens are there to do it in a easy tone. Kickable action for committed players in a very well presented package.

THE EVILDOGS
Palms Software
ET 85

A well presented slab of the well known line. Try and keep the well split from creating a craps stack, as it will create your slacker into your man. One-like which split up into numbered sections if you don't them. Available to everybody made by virtue of the present and steady state.

THE PIT
NES
ET 85

Risk the diamond mines and against the powerful robots but you might still be better off being naked. The only thing to be the thinking of game from the other instance of freedom level.

to fall from the ceiling. Avoiding the mine monsters is a just event as you make for the safety (in fact) of your open stop. Library and perfect.

TIP
TIP SLOOPER
Super Soft
ET 85

A 3D push back maze which you must control something like with the occasional POWER variety providing you with temporary accessibility over the obstacles. It's a 3D SLOOPER MAN in perspective. Could make you sleep.

TJ LUNAR ATTACK
Newman Conventions
ET 85

All the excitement, being part simulator and part perspective rock combat. Lacking the immediate impact of an out-and-out arcade action shooting simulation game with space fantasy. Switch between top and full-frontal mode and choose between four major characters and lanes. A very confident attempt at porting a 3D lunar landscape. Outstanding resolution of screen.

TJ TRAX
DW Teaco
ET 85

Provide your gun barrel to obtain the right inventory of fire gun in appreciation of ballistics or you try to introduce or destroy the tank travelling across a bridge. Expect some few Special options of play.

TRUSTA
Software Projects
ET 85

Prove the danger that'll be through the software of platform, pushing obstacles into burning slots. The requirements may be met but only because they've made the slacker look successful of action before in a different way. Software prototype code based. All of a thing.

TT
TEAM THUMB
Aesop
ET 85

TT has decided to explore a project: there are 8 separate objectives, each of which obliges TT to collect eight keys and open the same number of locks. Only then will you have outstared the cunning designer of the labyrinth. The four-way scrolling screen is a window on a small section of the chamber. It's given a complete plan. Spruce, white, lichen and wrong words are part of the on-foot challenge. Home of cartage for LITTLEWOOD.

TRAFIC
Distribut
ET 85

An Architecture program, very abstract - highly novel. Quite simply you control the traffic lights in an area of a city the object being to prevent hold up. Even with the knowledge of a bird's eye view, screen time is a easy. Recommended as "something different". Everyone will believe it's a piece of cake - it's not.

TRASHMAN
Combinet
ET 85

Trashman this is reflected here as a distance you must follow the garbage van along up pathways and bumping blocks to complete then replace them, perhaps using bonus tokens on the side for boosters. The van moves on, there's a long path to cover, steps to avoid it, schedule to keep to and more bus up the road. Good attention to detail, realistic simulation and fair cost in an unusual game. One of the best games of 85.

TRIO
Softack
ET 85

A set of 3D Caladonia with impressive music followed by a shower of colorful meters. Live up your gen-

up the beam from under the nose of the big green BOMBON. Start off with two charges and graduate to four. A good investment for VIC owners.

FRISCO
Police Software
£9.95

Highly competitive. Jump on top of the falling bricks until you reach the top. Avoid buying your brains-dead robot and remember you can only jump one step at a time. Isolated bricks may be moved and you can jump down without coming to grief. Enough to keep any home VIC end hot.

CENTIPED
Ban Sub
£9.95

Plenty of sound with good use of the VIC's palette in this arcade standard. No difficulty for conquering this screen.

CHOCOLATE
Puzzle
£9.95

An VIC VIC version of PENNY set in a chocolate world - more very hard to survive for long. Good multicolour palette. SUPERB music to accompany the brick-bat sliding action. Catch the enemy, deal with their eggs and find stars to line up. It's a special look for a home.

CONNECT FOUR
Arts
£9.95

Sound implementation of the ancient board game. Play the VIC or a human opponent (they are easier to beat). Better we could have been made of VIC light colours.

COPE 'N' ROBBER
Adventure
£9.95

Five sheets of shoot-'em-up characters into the dear old VIC. Make for the £9 to

change them, grab some diamond sticks off your partner and repeat. Occasionally you have to return to your car to dump the bags and reload your pistol. Average entertainment.

CRASHDOWN
Puzzle
£9.95

Evade the bullets and elude you in the hot glass. Scramble through the levels and finally grasp through the screen to collect the keys and make safe the free bomb. There's fairly testing music for the VIC VIC.

DEED LAIN
Software Projects
£9.95

A space tag for those who demand action on the frantic side of fun. Nine levels of alien to pacemans, each composed of three units in every frame. After each scene you get a goal for DEED. There's also shield facility and you certainly need it. Unusual opponent.

SALCON RIGHTE
Interceptor
£9.95

Non-Chattering scrolling through 16 colourful stages in the SCRAMBLE state game. Apart from picking up fuel, music has to be extended by keeping the relevant computer, vehicles, bombing screens and space games but so easy. Not easy, but enjoyable to concentrate of the game.

BATTY BERRY
Software Projects
£9.95

Help the outposts to down the flames in the area before he is oxidized by collecting drops of condensation. However all red hot spinning hot, some flames and the alien dog. It's a superb screen on the basic VIC. Very good.

FIRE GALAXY
Action
£9.95

A VIC expanded-screen screen of SCRAMBLE. Fantastic explosion handling while with it steps to generate. Ground-to-air missiles, bombing screens, cruise balls, mine layers, a maze with obstacles and of course some 4 fuel dumper. Acting a punk SCRAMBLE - is superior.

GALACTIC ABDUCTOR
Action
£9.95

Formations of alien herds fly about the expanded screen swooping on your innocent. Weaken and destroy the options, learn their flight patterns and deal with the eggs. Very good tapping music. VIC needed.

CRICKET
Tennis
£9.95

200 different grids to colour in as you race against time and side-step the obstacle. You have the power to create temporary holes in the network to re-route the program but there is not time to dilly. Easy to pick up, tricky to master. Good use of colour and sound.

4 SQUARES
Adventure
£9.95

Essential equipment for non-expanded VICs. Used the grid disintegrating the expanded-screen computers, separate the developing grids and keep out of sight corners. Practising some programming. It's all within CLASICC game. Obviously GEN-11P240 just left. Make the original inspiration but this is something of a game. Well, but don't the VIC owners just say.

QUANDLIGN
Omega
£9.95

OK. A classic, 1 or 2 player version simulated on an expanded screen. Fantastic mathematics to ensure copy and suggest to provide mobile screen. Can't see how you can beat the computer as it's got to be perfect.

HELL BATS
Adventure
£9.95

You control four bat characters - two directly with two multi-rotating views - directing starting low power at slow weapons into your defense sector. Automatic enemy bats are to lead to a last ditch measure. Good use of colour and waves of sound accompany your efforts to make the enemy.

INSECTOR
Rush
£9.95

Kinda like Defender. A horizontally expanded screen captures classic insects with yellow pods, green spreaders and green bombers for company. Slows of the banks, moves the highest buttons and shield to the one section. You can't go wrong, with 20-speed to choose from.

LASER ZONE
Adventure
£9.95

4 VIC. Control two pairs of laser - vertical and horizontal to eliminate two alien forms. Featuring diagonal fire in a maze. Purple and yellow particles everywhere plus fast-moving exploding pods. Smart bonus for this work. An example of 20th good. Got a scattering of alien effects and high level sounds.

MATRIX
Adventure
£9.95

A development of Goldracer requiring UK expansion. Double of more features: the editor creates parameter definition of the X.Y tag per dedicated shields - places bats among everywhere, levels of events and basically making your game an aspect of mastering mystery.

Merely require keep pace with the action as you work for detector as you down clicking records of the incoming spiders. Get their heads for bonus points and stop them on the floor who thought they could slip through the net. Hoopie often through 30 levels of original gameplay. As essential necessary for keep support.

Slip through the spider's preferred inside tips. In front the pencil and avoid the stacks as you shoot up for air. When all is safely prepared to jelly. Soft will take a how for a score as you slide the main. Lower introduces you.

An original quest for the best VIC title. Slides through the swagman's ballroom - not always easy as they come thick and fast - to save the lady love. Good the house full at the top of the pulley. Fun. Fun. Fun.

WIK allows you to complete most of Wile's inter-mediate. In this version you must collect various notes from the various platform complex, opening 30 screens. I don't think there is

another game quite like it for the VIC as the experience should be refreshing. Stage of action to brighten up the turtle-turtle.

An excellent simulation with believable story, happy, happy, colorful and a joystick. (Goals may even "mug" the table. As it is made still you be developed. Worth trying to vary your library - good sound and flashing lights.

Use hundred levels of groping about in the dark. As you move around patches of the screen light up helping you to discover the treasure chest. Obstacles may block your way or maybe make when you go through with your eyes. In some a somewhat change can be thrown as well. Several, but not when forms in this making game. Would be much better as an expansion.

NEAT From an SE but somewhat similar. For the fun and using the discs to throw the stone. Only two purposes on the first screen but reinforcements made in to continue your success. Interesting rather than thrilling. Not as good as the old version.

A frantic, five stage version of scramble. Shows of the puzzle is a bit chaotic and the control functions are slightly out of the ordinary. Suitable for those demanding a challenging, colorful program.

Scramble's version is absolute rubbish. Two stages of Italian language.

The best unexpanded - VIC SKRAMBLE! Yes. Each stage offers a real challenge. Navigate the various screens, detect the next spiders, try not to get the wallpaper. Hit the ball-squarer through the door. Plenty of targets to work with. Average results after you. Suitable use of colors and sound.

A jerky, fairly faithful copy of Pac Man for the basic VIC. Enough said.

Crash the people, atom-splitting insects between pillars. 30, losing screen of original as testament to keep your basic VIC happy - Will work better but don't expect magical replacement version.

Excel 30 stage freighters to a new world. Three you just have to combat with two series of anticlockwise - mode space craft attacking the old world before each transporter makes a landing. Rank hit involved, weakness. The transporter's shields marked by a change of color. Good sound - good game.

Slither to Avandia but nowhere as entertaining. Rather dull after Jones in the series. Survive a mountain to progress in the next wave - tricky as your ship slows down towards the end of each stage. Nothing going for it.

Large multi-layer - made game harder which of course change but with the screen border contained one. OK of working about the go shooting, but, looking dropping. The ring slings wings and dangle spiders. When helping lots of sharp shooting. Features flying action.

A not so impressive, something new game for the basic VIC. Saw, the only mistake by having every the best ships before they can see their troops. Game just slipping past straight corner, does the trick. Only about the yellow ship - avoid the red defences. Good graphics.

WIK of DEFENDERS action with a fully expanded screen. Screen looks hyper-space jump and invisibility mode help, but ultimately you need to hit on their side. Really little action especially in the day-light screen which is limited by reverse thunder-flares. Good multi-color-mode complete.

Track is a simple game of following a path through a maze of obstacles. It's a good game for the VIC.

An RC, grid-painting game where you will be lacerated by up to 9 open bugs as you attempt to collect everything red. Unless your three-line score overwhelms red within three lengths (traveller) - back to a red square for a full 30 levels, with background music. This is not an overrated classic.

TURNED OUT
G. B.
Adventure International
£3.95

A standard lightning storm for the basic Vic. You and the computer control motor bikes which leave a trail as they travel. First one to hit a trail is a drop! - fast out of the track to finish top five.

WANDA WALTER
Intergraph
£3.95

Good. You're Mrs. Van Dilly. Stop a balloon to escape into white air and never stop at sub-zero when descending - beware. Each level brings a new landscape to move (or flood) with steep rocks and tricky arrangements to give a wide berth to Good corners with the 'Yellow' Run of Your (possibly) budgeted.

ADVENTURE

There are so many adventure games available for the Commodore 64, both text and graphics, that they deserve a directory of their own. Not so easy for the Vic though, as you will see. Here's what the codes mean:

- T — text
- G — graphics
- IntA — annotated
- IntG — arcade

- A — advanced level

FOR THE 64

ADVENTURELAND
G. B.
Adventure International
£3.95

The brightside of Scott Adams who inspired by Colonel Quire (in a magic frame, not for its being the epitome of 'adventuring micro-awares back to 8000 B.C. It's not Adams' forward) still plays better than most new versions.

How many ways to make a sleeping dragon? How do you cure a plague? And all that's obvious here on the ledge!

Essential playing for some hours' fun, and though it contains some tougher problems than the beginner would normally expect, it is highly recommended.

ADVENTURE QUEST
T. I.
Level 8
£3.95/£11.95

The strategy or brain game to overthrow the demon king in the dark tower. To do this you must get past more elaborate traps than most early games.

Long text descriptions and a very good vocabulary help you to explore some 200 locations in pursuit of the Queen.

AFRICA GARDENS
T. I.
Gilsoft
£3.95

One of the QuillM adventures from the Golden Collection of Gilsoft.

AFRICA SAFARI
Am. I.
Intergraph
£3.95

This is a 'wording' 3D graphic adventure for which a joystick is essential to play. It's worth the effort!

You take the role of an explorer with a lead back and never connect with the joystick, notwithstanding by text commands. If the program doesn't do what you tell it, it means you're having fun exploring! Perhaps you should have stayed at home and studied an escapee's history.

AMAZON
G. B.
Tillam
£39.95

You have been hired by a British research firm to explore the Amazon and develop a novel and deadly medicine in the Amazon. Written by Michael Colborn, author of The Antidote to Death, Amazon offers three levels of play, all challenging in their own way.

ARROW OF DEATH
(Parts 1 and 2)
G. B.
Channel 9
£5.95

Two of Helen Rowley's Mysterious Adventures, the Amazon, from the sequel to Golden Arrow, lost in the snow.

In Part 1, the Beta has become a homicidal, and releases a mysterious gas of evil. Your task - destroy the evil. Part 2, which continues the epic, equips you with the means to destroy your enemy, but you are in a strange land far from home. Can you survive the deadly poise (how-long?)

Although forming one fairly well put on be played and enjoyed separately.

ASTERIC - HUNT FOR THE SUN GOD
G. I.
M. I. MacGillivray
£3.95

You are a young Aestic, especially whigged to search of the sun, which is to rise over your village.

Your commands are by single key-stroke, and you move forward through a perspective graphical representation of the 3D system's map. Having thought to design changes your direction. This is a Lords of Mind night research, but the program do not anywhere reach that standard.

ASTERIC TOMB
G. B.
Allgate
£7.95/£11.95

Set in an Amazon rain forest you must find and explore the Tomb, starting off in a fairly mundane house that could easily be in London suburbs.

The problems are quite nice, and cleverly arranged. The graphics, although nothing special, do reflect changes in the situation, and combine to make an interesting (though slow) average adventure.

I wouldn't pay the price for the disk version, though.

ASTERIC TOMB REVISITED
G. B.
Allgate
£3.95/£11.95

Quite a different game to play from its fore-runner. Asteric Revisited features a fixed format screen display with manually programmable pictures of the location.

With a much more limited vocabulary and a plot that doesn't seem to be too different, this is an updated case of the sequel not being up to the standard of the original.

BARBAN THE DWARF
T. I.
Gilsoft
£3.95

Author of the Gilsoft Golden Collection.

CASTLE & LAGGERAN
T. I.
SOS Adventure
£7.95

Reverse so-called 'old' of its old power, and collect treasure, are the objectives of the adventures in Castle & Laggeran. A good plot combined with interesting puzzles makes this a fine vintage game.

Points are awarded for carrying out certain actions, and for collecting things. A novel research-style feature is a maze that, when the player is finished, will be turned behind an object of his own choice!

CIRCUS
G.A.
Channel 9
\$9.95

Straddled in a remote spot your cat has run out of petrol in your search for fuel, you stumble across a circus that compleix with weapons and people - but strangely deserted. Or is there a clown you see once there ... ? Perhaps it was just an illusion.

An excellent game with lots of mystery and suspense. Circus is one of the best Mystery/Action Adventures from the publishers of Brits Horowitz.

CLASSIC ADVENTURE
T.I.
Malfurrow House
£8.95

Once again Colonial Cave soars to the mire. In a very acceptable version from Malfurrow House. Don't rely too heavily on clues peddled up from other sources for this one. It's not so fast as you wish a few more variations.

CLASSICAL ADVENTURE
T.A.
Channel 9
£9.95/£11.95

An apparently lethal version of the original Colonial Cave, but with Level 1's own mini-game included.

Just as you thought you'd got them, suddenly you are trouble again.

THE COUNT
G.I.
Adventures International
£9.95/£12.95

One of Scott's more favoured titles in the classic three-falling game. Sleep too much and you will wake up with some very nasty bites. Prescribe the better means of an old man's wisdom, complete with flashlight, and then plan your return.

Initially it all appears fairly easy - but there is a time and place for everything, and this

isn't about to be an easy ride!

CUT-THROATS
T.I.
Informa
CTBA

A complex game in typical Informa style. By Michael Baylis, author of Suspended and Infallible. A slim three-person positioned to locate two members of the old Windmill Mine. Indeed you meet with intrigue and deception in a game with an off-level score of bronze.

Cut-Throats is about two adventures in one. For a puzzle game which also has some scores, the whole plot of the game changes. None of these changes are more too obvious - in fact you are not told at your peril!

DEADLINE
T.A.
Informa
£14.95

A murder has been committed - or could it have been a suicide? As a detective inspector you investigate the evidence and question the suspects in the setting of an old country house.

This is a classic whodunit, but in pursuit of the guilty party (or more!) a certain someone suspects that you are getting too close for comfort. You might just be next victim!

DENS THROUGH THE SMOKING GLASS
T.I.
Applications Software
£9.95/£11.95

A Quill's political satire in which you, as Dick Thatcher, must evade the clutches of Maggie to escape 50 Downing Street. One fair score and you could end up as a freedomist in the firm!

Your ultimate goal is the 'Thaps' of the order of the Development, since and so you will meet some very familiar characters. But you must have a wifely eye on your money, as you are dead! Fun, politics - and the UK's best!

MISSION ADVENTURE
T.A.
Level 8
£9.95/£11.95

The British Lord of Missions. Think a short life must have been very rich. A world ride to the Moon. Yours will make you very rich!

With 128 locations to explore and 200 objects to help solve puzzles, you in your progress to your goal. Despite Adventure's title in reality you are following with problems for you to solve.

ENCHANTER
G.A.
Informa
£14.95

A service in the art of magic you are summoned by Merlin, Lord of the Circle of Elders, to investigate the evil and powerful KRL. But first you will have to find spell scrolls, and learn how to use them!

In a fascinating history game from Informa, Enchanter follows on the tradition and legends of King, and the Great underground Kingdom.

ESCAPES FROM PULSAR 7
G.I.
Channel 9
£9.95

Again as a planetary space Explorer, you must complete the circumlance - if you can reach it before you become another man! For the mutated sea organisms that has happily devoured your fellow crew members. And you are the only food left aboard!

Pulsar 7 is the 11th in the Mystery/Action Adventure series.

ESPIONAGE ISLAND
T.I.
Arca
£9.95

In a spying mission, your plane bursts into flames and you land on a mysterious island by parachute. How will you escape?

Bridge buildings, driving, water, disaster and the best

idea of exploration of some into the adventure - please may torture (please of your friends).

CIRCUS
Ank.A.
Emerald
£14.95

This adventure is one that is not to be missed. It is a very good game. Written by Joe Loughran and programmed in Fantasy, each adventure is a different place in a different way, and you have to be adventurous to succeed! At the end of it all, there is the award of £10,000 prize.

Quake comes from fast and original games with spectacular use of the Commodore sound system.

EYE OF THE RAIN
G.I.
Arca
£9.95

An Adventure world that you must escape the desert lands with the Emerald key in its hand. There's some very tricky puzzles to solve, and some excellent graphics to give it what you need.

Eye of the Rain was a prize for an Adventure plot competition in a magazine, and went on to become Arca's best adventure to date.

HARRISON HEIST
G.A.
Emerald
£12.95

Produced in collaboration with the author of the best-selling Sci-Fi book, the adventure game provides a sequel to the original story.

The setting is New York City. In a world where even getting a book is dangerously illegal. The tale of cancer is the burning temperature of your

FANTASIA DIAMOND
G.I.
House Computers
£7.95

The family kitchen has been

stones, and takes to a fortress across the river. Your job - recover it and restore Marie the Maiden's life. Implicated in a previous kidnapping of recovery.

Difficult, but not too possible for an adventurer of modest experience. This is a well designed and executed adventure.

FEASIBILITY EXPERIMENT
G.A.
Channel 8
£5.95

You are chosen to be the recipient of a flying rod of super-intelligence brought from the planet for survivors. Acquiring death, which is never truly for every you must become fearless.

GHOST TOWN
G.I.
Adventure International
£3.95

This is a classic treasure-hunting adventure, but set in a mysteriously deserted Western town. There's some really mysterious problems to solve too.

How do you break in to the jail? What are the ghostly animals in the reform cell about? How can you blow a safe without taking yourself with it? Scott Adams is his best!

GOLDEN APPLE
T.I.
Aris
£3.95

A treasure seeking game where some very logical things happen. A silver bar hidden within a log? A game without an identifiable theme? Golden Apple is well written but lacking in flair.

POOLS GOLD
T.I.
Rank
£3.95

Explore the old mining works and find treasure. That's the theme behind this text-only adventure from Rank.

SOLEN BATON
G.I.
Channel 8
£3.95

The **SOLEN** in the **Mystic Adventure** series from **Aris** Howard is actually written for the **TRIS** set before the **EDM-84** and **You were thought of!**

Reverend **Golden Baton** is a peculiar artifact, if you can solve some very tricky problems co-written **Paul** has made sure to be enough the most **DIFFICULT!**

HAM POST (AG)
T.A.
Melbourne House
£3.95

A delightfully unconvincing game that punks six of those who have made it to a mythical very length of social acceptability.

Your mission - to win the state of **Hamstead** but you must do it the best way from the bottom. So you start as a sheep-farmer with a pair of long legs.

Never said it will all go well if you do the right thing!

HEROES OF GANN
G.I.
Interceptor
£3.95

Your mission is to rescue five famous **Interceptors** and return them to the writer, collecting treasure on the way. A good job - with some excellent graphics, but they are always incomplete. The phoning of **concepts** can be very tricky too, especially when you speak to one of the characters.

THE HOBBIT
G.I.
Melbourne House
£7.95

What can be said that isn't already known? Based on the book, and packaged with the best, **Robert** was one of the very first developments in **Colours** colour graphics. They **Theobald** have not off you so **Edith** with huge **Robert**,

the game, is almost as **Interceptor** for the **TRIS** set as the **TRIS** set itself!

THE HULK
G.I.
Adventure International
£3.95/£7.95

Nearly every small boy has fantasised himself as **Hulk**, and if you have, here's your chance! But life isn't so easy as you may think, for there are a few mind-bending problems in this the best **Colours** adventure based on Marvel Comics characters, and written by **Scott Adams**.

The main problem is how to separate a **Hulk** from an ordinary you, but before you can do that there's a whole lot more to get through!

INCA CURSE
T.I.
Aris
£3.95

Get to the head of the Inca - this is a rather short game with little of interest. Probably the worst of the **Aris** series.

INTIDEL
T.A.
Infocore
£3.95

This is a personal exploration adventure, but with that difference that only **Infocore** can be a part of a game! Full of logic and puzzles, so it's the ideal for the idealistic adventures, **Intidel** also sports some **Intelligence** which will help you solve clues.

If you like deciphering them - Add to that a **Intelligence** **Intidel** coding, and you have a first class highly entertaining game.

KING ARTHUR'S QUEST
G.I.
Hill Media/Arts
£3.95

A perspective graphic adventure in the style of **Aris** - **Must for the King**. In this one, the **King** **Aris** of **Orlogia**, you must find your kingdom as well as that which is with a thick blanket of mist, causing the ground to freeze.

KLANTZ AND THE DARK FORCES
G.I.
£3.95

Klantz travels around through time and space, using his wit to complete the very fabric of the universe. He must be destroyed, but doing so is no easy task.

The game comes in two varieties but unfortunately it is less exciting than its title. Use **Aris** with a different vocabulary and a **PLANS** **Arise** message if it doesn't understand a command. **Klantz** is obscure and difficult to get to grips with.

LODS OF TIME
T.A.
Level 8
£3.95/£7.95

Enter a parallel time clock and explore time with your level of time. In order to solve this adventure, find it from **Level 1** with a theme like that!

Each level contains a trail of puzzles, and events in each level will have to be completed in order to complete problems in others. Up to the challenge, the **Arise** of **Level 8**.

MACBETH
Creative Sparks
£7.95

An impressive list of **Macbeth** follows the scenes of the most evil **Macbeth** the most evil **Macbeth** the most evil **Macbeth** and you take on the role of **Macbeth** or **Lady Macbeth** depending upon the part you play!

The game is so clearly and accurately that, to the play which comes with the package! That a player who completes the adventure will inevitably end up with an **Intidel** vocabulary of **Intidel**.

MAGIC STONE
G.I.
Antiparis
£3.95

Explore the haunted remains of Goli's van (Subversion) in the wastes of Transylvania, to recover the magic stone, possibly the catalyst for the alchemists' dream - the transmutation of lead into gold.

HACK OF THE SUN
C, A
Dynamind
\$29.95

You are an archeologist who wishes possessing correct information as to the whereabouts of the book of the Magic. You catch a plane to Helsinki and hope you are on the right track, as you start your search here.

The plot is very strong, more so than can be described here and the game is enhanced by some spectacular graphics on the Amiga disk-version.

MINERS NOSE
T, I
Gibsoft
\$5.95

Yet another of the Classic Games Collection, which reminds us, and has hidden for it a step away with no warning. Completed and I suppose average for a quality adventure, but not more.

MISSION QM
G, I
Spectrabest
\$7.95

One of those games where the player is endowed with values for Strength, Accuracy, Damage and Energy. Played on a limited screen, some interesting ideas here, but a difficult vocabulary, a long load, and a long data-read if you die.

Nonetheless, there are some humorous bits that offset the bad points.

MURDER ON THE ZINBERGER
Adv, I
Electronic Arts
\$29.95

A text adventure worthy for its description. Adventure.

Step as does this about a relationship with text and logic, but text and logic operated without major effect on the game, and movement around the premises of the simple Zinberger where a murder has been committed is clearly logical.

You choose which way to go, the GEM-40 decides who has been chosen away with an arbitrary death time. You have to get your death. More work to come as a text adventure.

MYSTERY OF MURDER MANOR
G, I
Savvas Software
\$9.95

There's something sinister going on at the Manor, and if you can deduce the right words, and get the right clues then you might solve the problem and escape the game.

There's some effects and graphics that change as you play but oh - those broken stories!

NOBLES OF TIME
G, I
Milestone Publishing
\$9.95

This is based on the Donald Featherstone stories by Michael Moorcock, and progressed by Glenda.

In Hamed you have a small boat, a map and enough food and water for six days. In this time you must save the world. You only instructions for the mission are "Open the Gate".

ORACLE'S GATE
Adv, I
Savvas
\$9.95

An unrelated game to which you first observe your quest object, and then using a 128-bit color through a network of tunnels and caves to search for it. You must collect 90 items of treasure, in your time.

Apart from movement, instructions are copied by single key strokes. The copy/paste changes every time you play.

PURDUS AND ANOMOMEGA
G, I
Chameleon
\$9.95

A mysterious Adventure in which the player travels into the realm of ancient mythology as search of the hidden secrets of the legends. Graphics are simple and experimental, previous work by the company is standard but interesting.

PURDUS AND ANOMOMEGA
G, A
Savvas
\$9.95

Originally known as Purdus and Anomomega, and later written for the Amiga, this game has now been combined in a two-volume pack for the Commodore under the Purdus and Anomomega title.

PURDUS AND ANOMOMEGA
G, B
Adventure International
\$9.95

The second and recent of the original Scott Adams series in which you start in your home town, and make your way if you can discover how to reach the island.

Does you will discover what you have to do to reach the island and, with the aid of a parrot, will have numerous problems to solve to your possession of the treasure there.

PLANET OF DEATH
G, B
Arts
\$9.95

A simple adventure featuring a story line and your attempt to escape the planet. Not so interesting as it sounds.

Finally, your diary has might be an advantage as you note the successful completion of this adventure.

PLANETBALL
T, A
Johanna
\$24.95

A game using a board the entire planet side. Features, you have to make a double-clicking escape, only to land in an alien world, where all the stars are written in an alien language. Investigating them is one of the problems, but you are aided by a friendly robot named Planet, in the basement laboratory.

PURDUS
T, I
Savvas Software
\$9.95

Your letter to the Glagorod King must be read, and the money is given in the crown. This is the entry for Purdus, and a story game it is not! And out it all away - how do you cross the road safely?

PYRAMID
T, B
Mogul
\$9.95

A very small text adventure with some very simple graphics from location to location. The problems are simple and don't come without warning, but not demanding.

QUEST FOR THE HEAL GRAIL
G, I
Dynam Software
\$9.95

As an old - it's those legends from the Arthurian legend. If you like your challenges played in this then you'll find more for this game - but be warned, it is not so easy as watching the film!

QUEST OF MERLIN
T, B
Milestone
\$7.95

SPIDERMAN
G, I
Adventure International
ES 96/VT3 96

Three-and-a-half-hour adventure (see Halls) that can introduce a wily spider to our village.

Can you separate the innocent and merge up this town? And can you find enough ropes to save a giant vein of the Daily Bugle? *Hydro-Man*, *Kingmaker*, *Mysterio*, and many others are all there to make these tasks difficult.

STAINLESS STEEL IN AI
S, I
Mosaic Publishing
ES 95

Making a fine hole is one of the less difficult tasks confronting the adventurer — it's operating it efficiently that counts!

Complete with the book by Harry Harrison, there has progressed this adventure that takes you into alienated worlds. Ever visited a hole with three *Stainless Steel*? Or seen the interior being over the *Perse* film's time elapsed?

SCARCROSS
T, A
From Infocom, distributed by Commodore
ES 95

Around the door-space presenter *Scarcross*, an alien world and you must face your back to the bridge. The plot is rare, and it's made of some puzzling black holes, two more more than in a day.

Explanation of the alien ship is the major part of this game, and you find some clues before others (straight away).

Two of the Infocom games offered by Commodore at a bargain (reasonable) price.

STRANDED
G, I
English Software
ES 95

Miscellaneous strange places in the world for the difficult to make sense of adventure, that sometimes some words in some places but not others.

The graphics aren't best but the story is excellent.

SUSPEND II
T, A
Infocom, distributed by Commodore
ES 95

The three major computers which created the planet's weather, food production, and transportation systems, have broken down, and you have responsibility from a spaceship to do the job yourself, while you arrange for repairs.

Its maintenance robot, each with its own personality, are there to aid you. You will need to use the board supplied to keep track of their whereabouts.

SOLEBOARD
A, I
Eclipse
ES 95

An Avision III designed and designed role-playing fantasy set of spells, potions and the like. Move from level to level using single key commands.

You can play simply at between two or many players. For you have to live to eat and good at speed reading to take on the text.

TEN LITTLE INDIANS
G, I
Channel 9
ES 95

Collect 10 mythical figures to leave the wilderness of the valuable gold figures recognized by Major Harrison-Brytle before he dies.

Twenty of puzzles to solve in order to the completion of this Infocom Adventure.

TIME MACHINE
G, I
Channel 9
ES 95

Lost on the moon in a suit, you stumble upon a lonely house and discover a strange device in the cellar. The owner is a scientist, it's missing the latest invention, the time machine you are now on. Spelling: two parts relating which must be found and restored to allow you to operate the machine accurately to effect a rescue. In working, you will see other ages.

TIME TRAVELLER
G, I
Acid games
ES 95

The evil God was *Schwerdtman* has been at it again this time making off with a magical invention, controlling the destiny of time. You wake up on a space ship to zero and greet your mission, involving travelling to both past and future, becomes clear.

TOMB OF IDIOTS
T, B
North
ES 95

Set in the Egyptian desert you have to enter the tomb and search for treasure within. Although given beginning status, there is a very difficult puzzle early on in the game, which few players survive. *Idiots* and unexpected death do not help to contribute to the game, which can only be described as mildly boring.

TRANSYLVANIAN TOWER
A, I
Richard Sheppard
ES 95/ES 95

Although advertised as a puzzle it is not really a true adventure game. It consists of a few mazes over which you must increase, supply bits and other words in your quest.

TWIN KINGDOMS VALLEY
G, I
Key-Byte
ES 95

Explore the mountains, valleys and rivers of the valley ruled by two Kings who hate each other. There are plenty of puzzles to be solved including the interesting how-to-kill-the-dragon problem.

A very popular game, in which the Commodore graphics show up those of the BBC version.

LIGHTHORSE ENGINEERS: THE PEN & THE BARK
T, I
Mosaic Publishing
ES 95

A systemless and unpretentious block column has appeared on the planet. It's growing in capital city Berlin.

An *It's Not You Moon*, you find yourself in *Urborthol*. Engage in discovering the origin and spirit of the phenomenon, in the *It's Not You Moon*. The short story by Colin Kelly is included in the package.

URBAN UTOPIA
G, I
Richard Sheppard
ES 95/ES 95

Scoping the spaces for the data points in *Urban Utopia* is the same as the modern day maze on a map depicting northern towns in *Thomas's Britain*.

Making of commands can be a little difficult, but the plot is quite original.

VALHALLA
A, A
Legend
ES 95

Animated graphic adventure, with a strong flavor of Norse mythology, in which all the characters wander around the scene doing their own thing. Your commands are entered to

and before the stage.

The object is to find the five quest objects which must be done for certain crimes.

WIZARD CASTLE
G, I
Adventure International
\$19.95, VIC \$25

One of Scott Brinker's writings has with *Aladdin*, in which you must lift the curse on Coast Castle by reacting some vocalic manabo-jumbo around his coffin. Before you reach the grand finale you must solve numerous problems, including how to get through a narrow creek, and how to lift a ju-ju bag. What is the purpose of the modern *Aladdin* and the curse?

WIZARD
G, I
Channel 9
\$19.95

Locked in a warehouse after closing time, you must find your way out. You meet up with Guy Fawkes and Jacques Cousteau, as well as other characters, and your ability to answer questions about the subjects may be to your advantage later in the game.

WITNESS
T, A
Infocom, distributed by
Commodore
\$19.95

Another highly unusual way from the Redoubt stable.

WIZARD OF AZURE
G, A
Channel 9
\$19.95

Having been twice directed to his place for the Golden Baton, the evil wizard takes on an earthly form to see the wizard responsible into a maze from which there is no escape.

JIM SOLA JIM
AAA, B
Melbourne House
\$9.95

A winding 3D adventure, where you play the part of the only able-bodied man left in your village after a visit. You must enter the hidden palace beneath to recover the lost gold.

Text and joystick controls are used to solve this game, with a keyboard option for those without joysticks.

JOPARK
G, I
Loce Software
\$19.95

The long lost crown of Ultimate Darkness is the quest object in this journey through the medieval lands of Ransgaard. Battles, puzzles and fantasy are among the problems that face you in pursuit of your goal.

JORK 1
T, A
Infocom, distributed by
Commodore
\$19.95

The first in the Jork trilogy, this massive text adventure is based on the original masterpiece *Decca Dampson*. In Jork 1 you will be confronted with a murderous trail and have to solve the riddles of Flood Control Dam No 1, a mine, and a jewel studded ring amongst others.

Full of business, with a strong background of the history of the Great Underground Empire, now extinct, has once ruled by the great Lord Dierick. He faced the thousand.

JORK 2
T, A
Infocom, distributed by
Commodore
\$19.95

In the second Jork text, you meet up with the somewhat forgotten Woodard of Frodoes and among the more difficult tasks are the recovering of treasure from the Great Bank of Zork, climbing up a wall, balancing flying and mounting a pair of eagles, and a dragon.

JORK 3
T, A
Infocom, distributed by
Commodore
\$19.95

The Great Finale of Zork, where the ground is upon leaving to become the Dungeon Master. Here you may enter the technology museum and play about with strange machines, and with some magic, steal the famous Platonic sphere.

Who knows, you might even meet Lord Eldemul!

FOR THE VIC

Dark Dungeons
Rating
\$9.95

Graphic adventure that needs 38K expansion. *Dungeons* maintains treasure - tries to recreate some of the role-playing and other qualities of the original *Dungeons* and *Dungeons II*.

Deterius
Ages
\$9.95

Text and graphic adventure that needs 38K. There's a detective surrounded with a dead body who must sleuth around for the murderer. It's the best detective you ...

Droids/Lord of the Galk
Ages
\$9.95

Graphic adventure for the expanded Vic - a different game on either side of the tape.

Games Knight
Ages
\$9.95

Mixture of graphics and text for the Vic with text.

Fear Gates to Freedom
Puzzle
\$7.95

20 of an ability for the Vic. This game has an arcade action and an adventure which depend on each other for a solution. It needs 38K expansion.

Gold Rush
Mr. Money
\$9.95

Graphic adventure for the expanded Vic - better than going to the Klondike.

Golden Apples of Gork
Rating
\$9.95

38K text adventure suitable for the beginner with interesting fantasy mythology. Excellent on-screen illustrations on how to play a *Dungeons* and a core facility.

Harrower
Rush
\$7.95

38K text and graphic adventure. The infamous pregame in which you 'could' win a level has as lots of money. Official game-of-the-week by *EE* Willis.

Magic Wars
Rating
\$9.95

38K text-only adventure - very reflective.

Mines of Sarama/Return to Carth
Mikao-Gen
£9.99

Two games on one tape. Both are best adventures for the ZX Spectrum. Via its Mines of Sarama you have to set up a mining colony on a distant planet.

Mission Impossible Computers
£4.99

Another in the Scott Adams adventure series - regarded as one of the more toughest games.

Mystical Island No More
£5.99

ZX graphic adventure.

Pharaoh's Curse Heroes
£9.99

Outstanding example of the modernist/arcade style game. First and furious action in various sections of Pharaoh's tomb. Excellent graphics and sound.

Pharaoh's Tomb Amazing
£5.99

ZX graphic adventure in which your character wanders through the tomb - unfortunately the progress is particularly slow. Regarded as more of an arcade game than a genuine adventure.

Pitsa Cove Computers
£4.99

Another Scott Adams offering in which your aim is to try and find the gold in Treasure Island.

Quest of Mervin Martink
£5.99

ZX text adventure. Seek the magical firestone hidden by a dragon. Short adventure, not difficult to solve with some stages of homework. Recognised as a classic.

Rescue at Bay of Mystic/Tyrs
£5.99

A really mysterious adventure in which you're never quite sure what's going on. American imported graphic adventure for ZX Vic.

Rescue from Castle Grand Tarnant
£5.99

ZX text adventure.

Sword of Hissel Hissel
£9.99

Your village has been depopulated by the curse of the evil Mage. You must find and kill him, and try the cure to return your people. Highly recommended text adventure for the Spectrum. Will run on either ZX or S.E. expansion - this can't get a worse of format.

The Caves Computers
£4.99

Scott Adams text adventure - perhaps the most difficult in the series to solve. Not surprisingly the country game in America - solve two tasks and you'll wake up with some very nasty bites.

The Curse of the Wyvern Tarnant
£9.99

Graphic adventure that needs ZX expansion. Clever ZX.

member this. Working materials not always kill you but weaken your constitution as you struggle to get past them. Random placing of objects affects each game in different.

The Dungeon Amazing
£9.99

ZX graphic adventure - another computerised variation on the classic Dungeons and Dragons game. Lacks the problem-solving features of some adventures but it's nonetheless challenging.

The Valley Arise
£9.99

Graphic and text adventure which needs ZX expansion.

Tomb of Drossus Riddings
£11.99

ZX graphic adventure in which your character wanders around chambers avoiding monsters. You must find the right equipment to proceed through the chambers.

Tracker Detective
£5.99

Science fiction adventure that leads to three ZX parts. Four character windows and deals with nuclear inter-planetary traders both in narrative and in a few books before the game is over. Good use of graphics. More of a strategy game than a puzzle adventure.

Wooden Castle Computers
£4.99

That man Scott Adams explains this time taking into Black Magic (see the book review).

White Barrows Arise
£9.99

This one needs ZX graphic and text expansion.

Wizard and Princess Wilderness Heroes
£6.99

One of the most graphic adventures for the unexpanded Vic which has been a best-seller for some time. It's in five parts, with each section loading separately. You must find a castle, kill a dragon and finally rescue the princess.

Zak's Kingdom Amazing
£5.99

ZX graphic adventure in which your character wanders around chambers avoiding monsters. You must find the right equipment to proceed through the chambers.

BUSINESS

Most packages listed below are for the Commodore 64, with a few on the Vic. **Pat software is not generally covered, except where the name or similar packages are available.**

With word processors, users generally want to know whether it is pre-formatted (what you see on the screen is what you get on print-out), which is difficult with a 40-column screen, or post-formatted, and the amount of text memory it can handle. Linked files enable

larger documents than can be held in memory to be printed out.

With databases, the significant questions are: how many records in a file, how many fields in a record, how many characters in a record or field, how fast can records be accessed?

With spreadsheets, very large numbers of cells, organized in rows and columns, may be offset by slowness of access.

Accounts packages present special problems in transferring their facilities, since those that fit in with classic accounts procedures may be hard for the uninitiated to operate, and the newer packages may not satisfy accountants in the Inland Revenue or HM Customs & Excise.

FOR THE 84

WORDPROCESSORS

**EasyType
Communications
ETS**

Outdoes version of very powerful superscript package for Commodore 8000 series. Post-formatted program with its memory of 70 kilobytes by 40 characters, with a maximum page width of 240 characters. Good editing facilities, documentation and error message provision are all good. Includes mail-merge and store-to-screen facility for those who like to see what they're writing. Also available as Easy Spell spelling checker for £20.

**IBM System
Three EM1 Computer
Software
£28.00**

Reasonably priced cartridge-based package with good documentation and post-format presentation. On-line-to-screen, fast scrolling for character strings and highlighting for preparation of long documents.

**Simply With
Sample Software
SW4 (disk)
£90 (tape)**

Features 280 lines by 80 character text memory. Fully on-line editing facilities and documentation. Mail writers in Basic. It's a rather cumbersome package which has no search or replace facility.

**TFT, Text 2 &
Three EM1 Computer
Software
£23.00**

Post-formatted screen display. Also available is a spelling checker (ST 84) which can be used with most other TFT packages. There's also a mail-merge program for £20.00.

**Viewrite
View Software
£78.00 (disk and cart)**

Pre-formatted screen display, 220 lines by 80 character text memory and maximum page width of 240 characters. Good editing facilities and nice navigation. Combination of Viewrite and Viewrite available for £20.

**The Word
Inquest Design
£224.25**

Package is expensive because it incorporates the Video Pak 80 80-column card which requires a sophisticated interface to be readable. Post-formatted but has a view-to-screen facility. Maximum page width is 240 columns. Also includes Mail Merge and Inquest Plus a simple database: 200 records per file, 200 characters per record spread over 11 fields.

**Wordcraft 40
Inquest
£24.00 (disk)
£90.00 (cart)**

A small program that is in many ways superior to its big brother. Pre-formatted screen with wrap-around, text memory of 80 lines by 80 characters, maximum page width of 80 characters and complete print options. Includes error messages and good documentation.

**Wordcraft 40
Dataview Wordcraft
£40.00**

Original version by inventors of the package. Pre-formatted wrap-around package with 60 lines by 80 character text memory, max page width of 80 characters, on-screen error messages, good editing facilities and excellent documentation. A wide variety of programs included with doubt that this is the best overall price.

**Wordmanage
Inquest Design
£28.00**

Has optional Microbeam card costing a further £14 - main price is semi-transparent. Requires to use the 80-column facility successfully. Pre-formatted display, text memory of 220 lines by 80 characters, on-screen error messages, good editing facilities and good documentation. Includes mail merge and as Chic, a simple 100 cell spreadsheet.

**Wispix 3 Plus
Wisp Computers
High Street,
Cottingham, Sneyd
£90**

Probably the best basic post-formatted program and still one of the best. One of the few programs to have a mail-merge facility. Memory although confined to 800 and screen. Text memory of 60 lines by 80 characters, maximum 180 printed characters with on-screen error messages and documentation. But school version for £65 and it is based on Paperclip.

**Word Wizard
ETS Inc
£75.00**

Probably the cheapest introduction to WWP, but has a restricted 3000 character memory (probably wastes the power of the 84) and only eight editing commands. Text memory is 80 lines by 80 characters. Documentation is fair.

FOR THE VIC

**Vicwrite
Commodore
£70.00 (tape)
£24.00 (disk)**

Pre-formatted 80 character maximum page width good documentation and in editing facilities. Typed material displayed one line at a time with only a slow scrolling during typing. Needs 8 or 16K expansion.

**Wordcraft 20
Inquest
£24.00**

A small program that is in many ways superior to its big brother. Pre-formatted screen with wrap-around, text memory of 80 lines by 80 characters, maximum page width of 80 characters and complete print options. Includes error messages and good documentation.

DATABASES FOR THE 84

**Database Marketing
ETS Inc (tape)
£24.00 (disk)**

Lowest! File managing package from the company that produces a range of commercial software for the 84. Also available is Matched 220 80 (a tape) £24.00 or £28.

**Database 84
Inquest Software
£140.00**

Although supplies from Scan-Itress (hang and get around) at times of writing, the copy shows it to have a fine record search time per record. Will hold up to 1000 records on disk. Will also manage record expansion into 10 fields with 27 characters per field. Will not use any field or combination of two. Should run any Commodore printer.

DFM Backup Software
ESB

Fairly fast program as it works within memory but a new version is in the pipeline that will use random access disk. File not compressed by memory. Fairly easy to use in its average business file file.

Easy File Converter
ESB

Records up to 300 characters, available over two screens with maximum field size of 80 characters. Three levels of password operation according to conventional work going up to three keys. Support program to search disk or process. Available for Easy Script.

Papers Save Computing
3 1/2 Software's Drive
Lucasfilm, Beverly Hills
ESB 25

Unique generic database with powerful graphics function. Complete capabilities include file save, index list and list, multiple list and alpha list, clear. Manual is rather comprehensive, though not if there give worked examples.

Infotek Server Software
Softtek
Mike Mowbray
Lucas 121446J
ESB 25

Good upgrade from Infotek (before Easy it was ready), with variable-length records, max

80 characters per field, nine screen pages per record, with very sophisticated calculator functions.

Infotek 84 Server Software
Softtek
Mike Mowbray
Lucas 121446J
ESB 25

File size depends on record length but maximum 2000 number of records. Maximum password with two printing threads, search function and calculator functions.

Micro Muggs Database
ESB 25 (disk)
ESB 25 (cart)

Cartidge version, very excellent value, save the new disk version is better still. Drive by pop-up menu making it easy for the beginner. Can also be programmed. Unfortunately some build for like search, can only be used if a procedure is written. Still recommended.

Proctfile Database
ESB 25

Medium-power database allowing 324 records, 20 fields per record, 70 file records per field. Number of records depends on file size but could be as easy as 2479. Sequential file system allows file with 477 programs. Will also link to Proctfile - and the manual tells you how.

Simply File Simple Software
ESB

Written entirely in Basic, no parameter via file table. Applicable to 2500 uses this program with 85 fields. Aug 1980 can be made a key for search - field size is 70 characters maximum. Minimum record size (as per field) is around 200. Also available for the Commodore 8000.

Superior Process Software
ESB

Very powerful programmable information retrieval utility. Up to 1000 character record size, with 227 fields and max field length of 256 characters. Four screens per record, help menu, editing capability plus very powerful programmable language. Also available are Shipping Sheet templates and Home application. Needs careful study to get the most out of it but the effort is worthwhile.

TDT Informer 84
Thorn EMI Computer Software
ESB 25

Up to 10 files per disk, up to 2000 per record with max 200 fields, 240 characters per field. Records limited only by disk size. Can be used to generate labels.

FOR THE VIC

DFM Backup Software
ESB

Does only ESB without multi-screen facility. Fairly fast program as it works within memory but a new version is in the pipeline that will use random access disk. File not compressed by memory. Fairly easy to use with average Commodore.

SPREADSHEETS

Ansatz 84
Richard Shepherd Software
ESB 25 (disk)
ESB 25 (disk)

Has maximum 200 cells both horizontally and vertically but the strictly manual would have you before, for example 4 percent of W-THEM conditional functions is feasible, sometimes lacking to some powerful spreadsheets. Lack of documented information on program but will support Commodore and TeleType.

Maxima 3 Support
ESB

Maximum 2000 cells horizontal/vertical (200 max on sheet). No-on-screen application, worth upgrading if you have other Maxima 1 or 2. File structure is quite accessible so portability should be no problem. Disk routine is better program for label update info. Manual could be improved. Will support Commodore and Centronics printers. Easy to use with good maintenance. Also available for C64000 version.

Calc Search
Maxima Software
ESB

Maximum 50 cells horizontal and 250 vertical. Easy to use, with good documentation and help screens on disk. This is an excellent SD sheet allowing over 30 sheets to be linked together, with the first one installing all the tables in the preceding sheet. Also, four sheets can be displayed simultaneously as separate windows on screen. Easy version, accessing only the sheet of a disk, available of 100 80. Supports Commodore and Centronics printers. Also available for the C64000.

Micro Search Database
ESB 25

Maximum 20 cells horizontal and 200 vertical. Good and fairly powerful package thanks to the unique pull-down menu system. Database presented with Muggs - but it slows you up until you're accustomed to it. Manual is hard since not in the past. Lives example sheet in program and other messages on screen. Supports Commodore and Centronics printers. Despite the steep packaging this is a sophisticated product. Recommended.

Matrix
Then EMI Computer Software
£95

Maximum 80 coils horizontal by 200 vertical. Superb documentation. on-screen error messages, help screen but difficult to adapt to new printers. Built-in is probably the best spreadsheet around at the moment. Not so fast as the CIVIL version since EAM control has taken a serious dip. Frequently 1/2 to 1/3 of windows can be created on the screen at a time, though they all have to be from the same sheet.

Practical Plus
Practising
£28.95 (tape)
£24.95 (disk)

Maximum 80 coils horizontal by 200 vertical. No graphs only Commodore printers (2025, 2032). Reasonably priced and quite powerful sheet. Has option of 1/2 and 1/3 screen layout options, sorting and 32 mathematical functions. Documentation is good but there are no example sheets in the program.

P3
Practising
£99.95

Make plan is that this sheet can be programmed in Basic. There are 12 possible program modules including such facilities as help screen, disk directory, prompts for data entry on disk. Maximum 3200 coils both ways but only 50 by 40 per sheet. Supports only Commodore printers. Reasonably powered sheet which programs elegantly. Files that qualify some portability. Excellent manual.

Practical II
Practising
£89.95

Maximum 200 coils horizontal by 200 vertical. A fairly inexpensive package that uses its ability to display the con-

tents of cells of up to 100 characters with an 8-column label to incorporate a micro-processor. There's also a database which means a year sort alpha and numerically. Spreadsheet uses screen files from disk and vice versa. Includes expanded ASCII. Nice 1/2 size of screen used. Practical and Practical file but there's no specific information on how to do this. Good manual written for apple but there's a 64 supplement with example sheets on the program.

Top Worksheet Calculator
Rams Computer
£14.95

Probably the cheapest spreadsheet around. Maximum 20 coils horizontal and 20 vertical. Simple layout, priced about 1/3 the price. Keyboard sounds program. Table edit with a and formulas are all in different colours to aid reading.

Wizard
Wise Software
£39.25

Described as an information processor, it combines spreadsheet, database and graphics (probably better than Lotus 1-2-3). Number of records per file only limited by disk size. Sheet has maximum 10 coils horizontal by 80 vertical and it's programable. Good plan is to speed available with a work cartilage and with graphic subroutines for job and bar charts. Free manual is being rewritten. Supports Commodore and CommodorePlus printers. Highly recommended.

Profitable Plus
Profitary
£19.95 (tape)
£24.95 (disk)

Little difference to 64 version (above) except that the vertical number of coils are restricted to 300.

Cashbook Accounting
Season Marketing
£59.95 (tape)
£24.95 (disk)

Powerful book-keeping program but requires a rather ingenuitous for some new to software. Worth reviewing, though as the use of the best around. Includes VAT analysis program for £35.95 (tape) and £24.95 (disk) but it will not calculate VAT on each invoice - probably because VAT is subject to change. Information with identifying printed Final Accounts program.

Easybank
Commodore
£75

Up to 20 fields for each stock record, including description, location, recorder level, tax rate, gross profit margin and supplementary subprograms. Includes Commodore reports on stock levels, analysis of sales (weekly or monthly) and stock selection reports.

Invested
Shelby Software
£20

A good invoice generator, links with the same company's 'Business' package.

Micro-Samples
Micro-Samples
8 Charlotte St West
Muscatfield, Cheshire
£172.99

Excellent general purpose package although particularly good for retailers using VAT schemes A to F. Apparently used by actor Ian Lancaster. Very good value.

Purchase Ledger
Assign Systems
£75

Adapted from popular Assigns package for Commodore 2000 series. Accounts

supplier account files were never cut, printers, installation and operated on a monthly cycle. With paid invoices being defined and outstanding accounts remaining on file until cleared. Prints statements which were used a wide range of important balances.

Sales/Purchase Ledger
Systematic International
£85

Cash flow, daily book-keeping including automatic production of VAT, staff customer records, suppliers' accounts, aged debtors and credits analysis statements and performance index. Fully programmable printer.

Sales Ledger
Assign Systems
£75

Again adapted from popular program for Commodore 2000 series. Accounts customer enquiries files through semi-rotary number. Final accounts are defined with outstanding accounts remaining on file until cleared. Prints invoices, profit rates and statements.

Stock Control
Assign Systems
£75

Adapted from Assigns 2000 stock package. Accounts up to 100 stock items per file, with reference to 1/2 reference.

Stock Control
Season Marketing
£19.95 (tape)
£24.95 (disk)

1/2-disk stock records may be held on with the help-titled machine code program with several printer options.

Stock Control/Invoices
Systematic International
£85

Recently-released double program. Will store 100 stock items (including) with stock code

ACCOUNT PACKAGES

via for invoice generation and stock control. Handles up to 500 suppliers, 750 supplier transactions and 750 customer transactions. VMS is fully supported. Fully password protected.

Design Software EZ8

Financially easy-to-learn program. Probably not the best but the easiest for the non-financial user. Works with financial base tables, making it a better approach for small package or IBM.

Via Disk Control Commander EZ9 85

Scale of these programs that handle up to 750 accounts files.

PROGRAMING

ASSEMBLER

Assembler is the most direct way of programming apart from writing in actual binary notation, and is very much quicker than Basic in execution. Assembler uses mnemonics which are decoded (assembled) by a special program (the assembler) into machine-code. Assemblers are always specific to the processor chip or which they run.

Connectix machines use 6802 (Vic) and 6810 (64) assembly language, which are virtually identical. Both have an identical set of 53 microprocessor instructions, each having a variety of addressing modes.

FOR THE 64

Assembler 64 Interceptor EZ7

Probably the cheapest assembler available. It's a three-pass assembler which assembles directly into memory. There's an option for saving the object code. Source programs are prefixed and edited like basic programs. But it supports a few facilities. Very cheap but very margin on transactions.

Dr. Murrain's Beginner's Assembly Language Heavyfield Software EZ2 85

Not just an assembler but a tutor. The package includes a well illustrated, 280-page book covering the whole spectrum of machine code and the 6802 instruction set. A number of examples and exercises are included. The assembler itself is of the 'assemble-to-type' format: code is not converted into object code. Although it includes an advanced memory loader, the assembler is more suited to the novice.

Mike Supersoft EZ4

Cartridge-based, quick, but expensive three-pass assembler and monitor. Monitor has commands for searching, moving and disassembling machine code. Assembler accepts standard 6802 notation and pseudo-ops. Code directly generated by writing into the RAM browser-like format. 6810s and 6810 chips in that, when the code is complete, it is copied into your specific area. Our monitor (memory is not included as command).

Mosaic Assembler EZ6 85

Machine-code word-by-word display, commands for the string, searching and mod-

ifying of machine code. It accepts standard 6802 notation, addressing modes and hexadecimal operators. After has commands allowing user to be configured to use a Commodore printer. Armed at the moment with a little more in documentation.

Deimos 64 Command Enterprise EZ Perceptive Real Software, Glasgow EZ9 85 (over), EZ9 85 (disk)

Contains two machine-code programs. FREIGHT is a full-screen, available text editor using a comprehensive set of commands to create the source code. ASM then converts it into machine code. A good value, professional product. The only niggle is not including that you can't relocate code in a different address. Elsevier is working on a new product that should incorporate substantial improvements. Upgrade available for disk.

FOR THE 64

Zax 64 Design Design EZ 85

Command monitor and assembler - the monitor gives simple single-letter commands. The assembler creates source files in Basic-like form, allows assembling of macro-codes and allows numbers to be expressed in either decimal, hex or binary. Lots of features and low price makes Zax an attractive buy.

FOR THE VIC

Deimos Command Enterprise (see above) EZ2 85 (over), EZ2 85 (disk)

For Vic with 8K expansion See above for details.

Mike Supersoft EZ8

As above except that the Vic version is not just an assembler. It contains commands for graphics, sound and file systems.

EXTENSIONS TO BASIC

Commander Basic for the Vic and 64 is notoriously lacking in useful commands for manipulating graphics and sound, and for providing facilities to make your programming more fun and easier. So a package that provides these much required extra commands looks like being a good idea - that's why there's so many around.

FOR THE 64

Ace4 Maths/Draw EZ 85 Available from: Castle Yard House, Castle Yard, Richmond, TW9 3EP

Contains a collection of 38 different Basic commands allowing features of the so-called 'super' commands to be used. Includes PROSDIG and PROSDIG to be easily included in your own programs. These include Graphics Sound and Utility commands and a few special commands system designed to make the console an alternative to the disk drive.

BC Basic BC Computers EZ6 85 (over), EZ6 85 (disk), EZ6 85 (cart) Available from: C W Computers, (Preston), Derby, DE2 1BR

Over 27 new or modified commands have been added, which can be entered in full or abbreviated form, covering many graphics, printer sound, machine code and all structured programming. All commands have not been fully taken care of speed of operation is not affected. Detailed with an easy to follow 34 page manual.

Basic Lighting
Basic Software
£14.95 (tape)
£18.95 (disk)
Available from
De Alexander & Parsons,
Wotton - near - M3, Wex,
RG25 1AT.

A fully-revised extension to Commodore Basic which adds 200 reserved words allowing you to do tasks by the command. By The package includes a suite of useful programs. Up to 254 software sprites can be defined with user-selectable dimensions. Sprites can be sorted, spun, mirrored, enlarged or inverted.

Bigness Basic
Heavyload Software
£14.95
Wholly Available

Sold as part of the De Wittes Computer Learning Series, which comprises a paperback textbook supported by software on cassette, Bigness Basic also includes Heavy Aid. This is a troubleshooting/repair utility that adds 28 new commands to Commodore Basic. The full implementation of Heavy Aid which will comprise of 120 functions and commands will hopefully be available on disk in early time.

David's Basic
Commodore User
£29.90

With almost 50 extra commands the package becomes itself with the general deficiency of Commodore Basic compared to more "serious" dialects of Basic. Identification of symbols and strings are well covered for and the inclusion of many fundamental/practical commands is most welcomed. The package is disseminated from White Computers by Commodore User.

Graphics 84
Supersoft
£16.95 (Case)
£12.95 (Disk)
Available from:
Westchester House
Caning Road,
Westhams, Hemm,
Midhurst, GU24 7LJ.

This utility has some 22 commands for making the most of the 84's hi-res graphics and sprites. Each Basic type command is prefixed by the 'W' sign or called directly using a F9F or F. The utility can easily be called from within your own program and full instructions are given on how the use to be used.

Help CB4
Stack
£28.00
Available from
250-258 Derby Road,
Beech, Liverpool L20 8LN

This cartridge utility comprises 20 additional commands. These are mainly useful commands useful during program development. Commands such as Auto line numbering, a Trace facility to debug a program and its Append command to merge two separate programs. Other commands include disk operating system support, a machine code assembler and disassembler and printer control.

Master 84
Color Software
£19.95
Available from
Lakeside House,
Empire Hill,
Barnet, KT2 7BT

More a complete program-development package rather than an extension to Basic. Supports 64 new colour sets as well as Basic IV and programmes Turbo Machine code assistant. Supports Turbo Keyed Disk errors and data compression. Multiple screens, 25-plane arithmetic and more color features are also included. Turbo for 84 is a professional program-development tool.

Simon's Basic
Commodore
£33.00
Wholly available.

Adds an extra 124 commands to standard Basic. More areas of commands are used to utilize graphics and an attempt at structured programming. One of the first Basic extension packages and although comprehensive, thought may have been a missed opportunity for Commodore in making up for the shortcomings in the 64's standard resident Basic.

Softcap
White Computers
£34.95
Available from
1-Clarks Hill Road,
Widley, S. Yorkshire

This is a cartridge utility which you choose the extra commands you think you will find the most useful. With more a 100 different commands to choose from, the only limitation is that your choice does not exceed 7680 Bytes. Commands range from Auto line numbering to a complete user-sprite editor and Basic a disk command.

Turbo Extended Basic
Active Software
£14.95
Wholly Available

Adds 45 extra commands covering sprites, graphics and utilities. Comes with an appendix of page instruction manual. Similar to ACCORD (from Melbourne House) but without the tape utility. Price keeps companies favourable as the price of graphics and sound tapes.

Ultimate 84
Adamssoft
£16.95 (Case)
£18.95 (Disk)
Wholly Available

Adds 40 commands to standard Basic. These cover the much needed areas of support, graphics and sound. The entire package is not protected as there is a dedicated joystick command and sprites are fully supported. Package comes with comprehensive manual, a two part colour tutorial and demonstration program.

Video Basic 84
Adamssoft
£42.00
Available from
18 Beaulieu Avenue,
Portsmouth, Leam GU11 6JZ

With many video packages you can produce a complete version of your programming expertise which you can then distribute without paying any royalties. Graphics and sound are well catered for and no other games programmers with direct control of levels from tape, joystick or paddle. Also handy in fact more to popular products.

FOR THE VIC

VIC 90
Game Plus
Teasaver Ltd.
£12.90
Available from
Eds Park Lane,
Basingstoke, Hants.

Adds 45 additional commands including Auto line numbering, auto-scrolling, Edit, Block, delay, Insert, Dump, Rotate, Set, Insert and paper colour, and sound control. It also includes a qualified read facility. Available in £24.95 or £14.95 for use on the Video Motherboard. A useful programming aid for the Vic 90.

COMAL

Comal was once thought of as a serious contender to Basic because it is easy to learn yet structured and therefore able to produce more understandable program listings. Comal was extensively developed in the '70s and reached a standard in 1982. The first commercial implementation for the

Commodore 64 should be available soon on cartridge. In the meantime, public-domain Commodore can be acquired free of charge. See below.

Comal
Universal Danish APS
Christiansbølmsgade,
DK 5170
Horsens, Denmark
 approx £20

Apparently, the cartridge is nearing completion, but is not yet available at time of writing. When it does arrive, it will have (hopefully) commandable function, graphics and sprite facilities.

Public-domain Comal
Brain Orange
73 Moorhead Way
Stamanga, Notts,
EN1 2NE

A public-domain version of Comal can be obtained free of charge from Brian Orange of BCP&S at the above address. For disk-only copies, see our file. (Only a formatted disk with appropriate return postage to the above address.

FORTH

Like Basic, Forth is a high level programming language. But unlike Basic, it is not interpreted as "run-time", but compiled, so execution of the program is much quicker because it doesn't need to interpret line by line as it goes. Debugging and highlighting of compilation errors is also easy.

Forth is a structured language, its code being built up from the lowest to the highest level. This "top-down" approach and the use of Reverse Polish Notation gives the language a back-to-front look. Forth can approach the speed of machine-code.

FOR THE 64

Vic-Forth
Adamsch
£12.95 (cart),
£14.95 (disk)

The 64 version contains most of the features of the Vic-Forth but not a standard implementation. A 40-page manual is included. Probably the cheapest Forth you can buy.

64-Forth
Autogems
£19.95

Expensive yet very flexible implementation. Again, it doesn't conform exactly to the 64-Forth standard but, a good version for the beginner.

710-Forth
Basics Software
£14.95

An attempt to implement faithfully the 64-Forth standard on its tape for the 64, not difficult to use and reasonably good for the beginner. But the manual is disappointingly short. The tape includes store and ramblers, but disks may be available.

Vic-Forth
Adamsch
£12.95 (cart),
£14.95 (disk)

See above - the Vic version looks like it is new.

Vic-Forth
Autogems
£24.95/£19.95

The cartridge costs 12 times more the cheapest, but you'll need at least 48 K RAM expansion to make it work. For the extra 200 you get 18K expansion built into the cartridge. Autogems' Forth is unfortunately not a standard implementation. A little pricy but good for beginners.

Vic-Forth
Basics Software
£24.95

Nearly a 64-Forth implementation but adapted for the Vic assembly map. The cartridge costs complete with 18K expansion. Unlike the 64 version, this one does not include the editor and assembler. You'll really need a disk to get full benefit from this product.

PASCAL

Pascal is probably the most popular programming language next to Basic, but its use is confined more to business and professional software. It's a compiled language which means it produces an object code (code which the computer actually understands) from the source code. So it runs much faster than an interpreted language like Basic. Pascal has been described as an "elegant" language because it lends itself to structured programming techniques. It is available only for the 64.

Optim Pascal
Style of Computer Systems
£14.95 (cart),
£19.95 (disk)

The only Pascal compiler we've heard of for the 64, and it seems to be a complete implementation. Both the cartridge and disk versions feature a text editor, write program and small operators. The much cheaper cassette version features a resident compiler which takes up 18K of memory, the remaining program space. The disk version does not suffer from this problem and can create source files limited only by the 64's memory.

GRAPHICS PACKAGES

FOR THE 64

Art Master
Commodore
£9.95 (Cart & Disk)
Widely Available

Art Master gives you a range of 161 colour shades to choose from and with the aid of a palette, or the on-screen keyboard, you can compose your own masterpieces which can be easily stored and recalled from cassette or disk. The program is sold under the name of "Your First Art Master" which might help to decide whether this is the right graphics package for you.

Default
Graphics
£14.95
Widely Available

Do some might suggest a graphics package directly suited to the under 100s, however here are several novel facilities available which make this program stand out from the rest. One of these is the "SCRAM" facility whereby a particular area of the program screen can be temporarily swapped for intricate storage work.

Comprite 64
Manhattan Software
£9.95
Available from:
43 Northlands Avenue,
Bradford, W. Yorkshire

This is no inanimate driven machine code, which maintains the 64's right system to be manipulated in a variety of ways. By providing certain parameters for each sprite, control is totally independent of the main program. Package includes demo routines and full instructions.

Graphic 64
Amig
£14.95
Widely available

A software package containing three utilities covering graphics, animation and sound. The graphics routine allows you to plot and draw

on the screen by controlling a simulated joystick and touch stick) by joystick or keyboard. The second section of the package turns the 84 into an intelligent application with a wide choice of voices and effects. The Animation utility combines facilities from both the Graphics and Sound programs.

Cadpac 84
Advanced
£35.00
Available from
18 Newnham Avenue,
Bechtels,
Leam. 0611 642.

Designed as an interactive Computer Aided Design Package, Cadpac has many of the facilities necessary to turn your 84 into a computerized drawing board. Ample with a high quality light pen, which is not included in the package, you can call up pre-defined shapes or use the freehand draw facility to produce very detailed drawings which can also be hardcopied to popular printers.

Go Spots
MicroWorld
£9.95
Widely Available

A sprite utility which enables you to design up to 32 multi-colored sprites on the screen and try them out in any sequence. You can position them back to front, spin them down stretched (horizontally or vertically), or in negative form. Includes the essential conversion program to convert your sprite designs to 'data' statements for inclusion in your own programs.

Graphics Designer
SuperDisk
£9.95 (Cash)
£11.95 (Disk)
Available from:
Wharfedale House,
Canby Road,
Wetherby, Wetherby,
West Yorkshire WGS 75J.

A comprehensive graphics design package which allows creation of the finished picture

and screen/ via joystick and keyboard, or keyboard alone. With over 30 commercial selected items from the keyboard, you can create your own picture. Easy to follow instructions are given on how to incorporate your designs in your own programs.

Graphics Master
Mc Chip Software
£7.99 (cash)
£9.95 (disk)
Available from:
8 Caroline Road,
Uxbridge,
Uxbridge 1838 279.

Allows the design of both user defined characters and sprites to be made simultaneously and then saved for future use in your own programs. Contains many unique commands to create effects such as scrolling and rotation of graphics characters.

Graphics
85F Computer
£19.95 (Cash)
£19.95 (Disk)
Available from:
82 Portman Drive,
Camley,
W. Sussex BN10 2JL.

A light pen based graphics package with the light pen itself included along with the supporting software. You draw directly onto the screen with the light pen and your creations can be saved or recalled from tape or disk. Sprite designs are colour (as well as a screen dump to a printer).

Papyrus
Roma Computer
£19.95
Available from:
Warwick Park,
Warwick Road,
High Wycombe,
Bucks. MK9 1JW.

Claims to be "the complete colour drawing and painting application using multi-colour bit map". No extra hardware requirements. Extra facilities include: Pen, Brush and Text modes. Curved/straight lines, Fill and Brush Fill. Colours selectable horizontally, ver-

tically, diagonally or by dot, and using character movement.

Papyrus
Delta
£17.95 (Cash)
£19.95 (Disk)
Widely Available

A Graphics package with a clear well written manual all the 'viewer' shapes are included in the program, you just enter the required parameters. Movement on screen can be either by keyboard or joystick and mistakes are easily rectified. Apart from the full range of colours, 22 different textures can be created and displayed, and all your 'masterpieces' can be saved to tape or disk for later retrieval.

Picture Builder
Commodore
£9.95
Widely Available

Picture Builder presents you with a palette of 128 different colour shades and a collection of character sets consisting of over 100 shapes. Picture composition is therefore a matter of positioning the appropriate shapes with the aid of joystick or keyboard, in the appropriate colour on the chosen space on the screen. Full title of package: Soft Image Picture Builder.

Splinterman
JRS Software
£4.95

Available from:
18 Weyland Avenue,
Worthing, BN13 2JQ.

A sprite creation program where each sprite is displayed on the screen in 8 separate slots. On completion the Basic Code is generated for inclusion in your own program. Simple BASIC program that makes sprite design that little bit easier.

Tanks Graphics II
Horizon
£30.00
Widely Available

The Tanks in this program is available apart from a point which you move around the screen with joystick or keyboard. The program is easy to operate and offers an infinitely options are selected from menus which appear on the screen at the appropriate moment. Easy to incorporate into your own programs.

EDUCATION SOFTWARE

Educational software for very young children has begun to mushroom for the Commodore 64, after a fitting start.

Virtually all packages are intended for home use and are generally of good quality. The most useful software should contain elements of game-play, a certain amount of parental involvement and make use of the 64's superior graphics and sound capabilities. But not a great deal is available for older children apart from '7 Level and CSE exam revision courses.

FOR THE 64

AIRCRAFT
Pige Software,
Pen Book,
18/21 Gosport Place,
London SW13
£7.95

Four programs for middle school children in which they have to identify planes, play a game involving recognizing the shape of planes and their height and bearing, operate a flight simulator and act as a plane back to the lounge. Accompanying books and programs sold.

ASTRONOMY
Paper Software,
Fox Books,
18/21 Cavage Place,
London SW18
E1 8B

Five programs for 10 year olds and above including two games exploring the stars and planets, a test to become an astronomer, a database of information on planets, an introduction to constellations and an explanation of phases of the moon with a trip around the moon. Accompanying book and program notes.

BRISQ
Paper Software,
Fox Books,
18/21 Cavage Place,
London SW18
E1 8B

For 10 year olds and above. Five programs including: *Britains* - a question and answer game on facts about birds, *Britainers* - a game to test kids on their favourite birds, *Britapedia* - a word game containing the names of birds, *Brit Migration* - a game to move birds back from their winter habitats, and *BritLife* - a database containing user's own observations and facts on birds. Accompanying book and program notes.

CACAO'S TRAVELS
Microsoft,
Holtzer Games,
London EC2P 1JG
E1 8E (area)
E18 0B (link)

This is a much awaited adventure for young children featuring the *Arville Coast* the cat. Children can choose one of 18 stories to follow, each of which is complete in itself. Only six keys are used throughout and there is an accompanying booklet containing all the stories in the software. plus keyboard overlays to simplify things further.

DINOSAURS
Paper Software,
Fox Books,
18/21 Cavage Place,
London SW18
E1 8B

Again for 10 year olds and above. Four programs about prehistoric creatures in *World of Life*, you have to control evolution, *Life on Land*, you have to survive as a land creature in the age of reptiles, in *Water* it, you must identify great creatures as a diver, and in *Man on* it, you'll be a dinosaur in search as many things possible. Accompanying book and program notes.

ATTACK ON THE SOMME
Trained Publishers,
128 Carter Avenue,
Brixton,
Surrey SW1 6NH
E13 8B

This package has been designed to introduce pupils to the secondary school to the subject of history and details accompanied with a reader. Allied attack on the Western Front in France during the First World War in 1916. It cannot be treated and is particularly good in how it develops reading and an increased confidence to consider the famous and events related to war and peace. Good resource materials provided.

BLACKBOARD
Argus Press Software
Group,
1 Garden Square,
London W18 2AH
(01-437 0828)
E2 8B

For the under eight, this program lives in the *CleverClaps* writer written for Argus by *Computerize* and involves exchange puzzle made up of 12 blocks. Aims to teach shape recognition, reflections and rotation. More by the home than school. Five levels of difficulty plus supplementary knowledge packs. Lively graphics. Offers to the user order books, *Sam Safety* (where you have to teach Sam the Highway Code and guide him safely home) and *Gift Shop* (includes five games to encourage shape recognition for three year olds and above).

CHILDSPRAY
Pulsarsoft Ltd.,
48A Queen Street,
Widnes,
Merseyside S44 6TD.
E1 8E

The pack contains 10 educational games for use to 10-year-olds for home as well as in school. They provide practice in the five rules, word games into alphabetical order, repetition and irregularly signs, spelling the difference between words that look and sound similar, synonyms, homonyms and idiom-words. Lots of documentation.

EXAM REVISION
Langman Software,
Langman House,
Barns Mill, Harlow,
Essex CM20 2JG
E1 8B web

Exam revision packs for 10 level and CSE students covering *Classical*, *Computer Studies*, *Maths*, *Physics*, *History*, *English* and *French*. Five programs to teach packs. *Classical* includes *Elements*, *Male*, *Beethoven*, *Computer Studies* covers *Viruses*, *Paths*, *Files* and *Logic*, *Maths* includes *Translation*, *Integration* *Area* and *Circle* and *Physics* covers *Formulas*, *Chemistry*, *Light* and *Motion*. All the packs contain a database program too. Good instructions given.

AZTEC - HUNT FOR THE SUN GOD
Neil MacGibbon,
81 Bartholomew House,
82 Fleet Street,
London EC4A
E8 8B

A tremendous adventure program for youngsters with some illustrations graphics intended to help develop spatial awareness and mapping skills as well as the player's powers of deduction. Will *Quick*, *Learn's* *draw* come first? You'll have to play the game to find out! (Price included in pack)

BINK & LUMBER JUMP
Langman Software,
Langman House,
Barns Mill,
Harlow,
Essex CM20 2JG
E1 8B

Recommended for six to 10 year olds this is a really good one based on *BINK* like riding. Features addition, subtraction and multiplication for confidence with seven dif-

DESIGNER 84
Swift Software,
Barns,
Waters Road,
Jarrow Road,
Crawborough,
East Sussex TN11 2EY.
(08328 82828)
E12 8B

Graphics package which simplifies the use of the computer's standard graphics character set and enables the character arrangements to be displayed under program control. The program generator provides all or part of a design and saves it into a new program. Images can be saved on

FLIGHT PATH
Barn Software,
Blackwater House,
Widnes Grove,
Widnes,
Merseyside S44 6TD.
(08328 82828)
E17 8B

This is a flight simulation in which difficulties on the role of an airline captain are met plus a flight across Europe. Accurate calculations and logical decisions have to be made in order to achieve a successful flight. There is a choice of destinations and departure from 21 European airports. Factors to take into account are weather conditions, altitudes and type of aircraft. Wind and speed variables are included in the program. Concise documentation in the form of teacher's notes, work sheets and further suggested worksheets.

GEOGRAPHY
Search,
5 Minute Games,
Mapsheets,
Eastward,
Nottingham N018 2AF
£5.95

Several programs are contained in Geography in Treasury Hunt there are three games based on map reading, the use of the compass, directions, bearings and estimation of distance. In Around Britain in 48 Hours you have to find the hidden name of a city or town, travelling by road, rail or air with a limited supply of money, a combination of the spread of knowledge, vocabulary, and there is a database containing information on the countries of the world.

GERMAN
Search,
5 Minute Games,
Mapsheets,
Eastward,
Nottingham N018 2AF
£5.95

For those to 14 year olds there are four programs using vocabulary of the words, in the lesson, on history and as a quiz. You can either opt for sentences written in German with a word missing which has to be inserted, or just words into their correct order to sentences selected randomly from a bank of sentences. Three levels of difficulty are provided according to content.

GET READY TO READ
Comprehension Business
Mechanics (RM) Ltd
1 Winton Road,
Winton Industrial Estate,
Corky
Northants NN17 9JX
(0538 208202)
£12.95

For the winter nights, this pack of four cassette or disc is designed for young children as an introduction to reading. Each tape or disc contains one program which takes a circular approach to a different aspect of learning letters and sounds. Its real value for the money with good instructions for the parent as teacher.

GETTIN IN THE
CRYPTOGRAPHY
CODE (RM) Ltd
Chesham Ltd,
37 Winton Road,
Northants NN18 2JF
(0538 25182)
£12.95

This is a follow-up to Codes in the Microscope which aims to teach programming using BASIC and LOG statements, storage of data etc. Also provided practice in simple program writing and other programming features. Lots of documentation included. This is rather a novel approach to the subject.

INTO THE UNKNOWN
Tweed Publications,
128 Capden Avenue,
Brighton
Sussex BN1 6NN
£28 (Cash)
£21.95 (Inst)

This is an extensive simulation that involves children in a simulated voyage of discovery during the Great Age of Exploration in the 16th century. There are all kinds of accessories but the beauty of this program is the amount of work it encourages early from

the computer - in the form of messages, written reports of the voyage, discussions about the land and more and much more. Excessively authentic and highly imaginative, one of the outstanding programs of 1984.

FOR THE VIC

MRS ARTHUR'S GUEST
M B MacGibbon,
35 Northcote House,
82 Fleet Street,
London EC4
£8.95

Another adventure from this previously well known publisher with 24 graphics portraying all the characters in the book of King Arthur including Morgan le Fay, Lancelot and Merlin, will Arthur himself and will the Morgana live again? Books included for your wish.

FOR THE 84

MATHS
Search,
5 Minute Games,
Mapsheets,
Eastward,
Nottingham N018 2AF
£5.95

Here are five programs for use to 14 year olds dealing with tessellations, graphs, working out how a number machine works addition and subtraction in two parts, and running a factory to make a profit.

MAGIC MACHINE
Langens Software
Langens Group Ltd,
Langens House,
New Mill,
Wales,
Fosse C120 2JL
(0275 28170)
£5.95

added to or altered in your composition.

OLYMPIC 84
Score Software,
Wickford House,
Wickford Green,
Sturminster,
Dorset
(0506 616170)
£10

Two cassettes are provided (also available for use to record the name and country of each medal winner and the winning score of every event in the Olympic games). There are then to be compared with results from the previous two Olympics. History contains the results of every summer Olympic event held in 1980 checked by nationality and winning score. Good documentation.

SUPER
Beema Educational
Software,
Beema House,
The Hoehead,
Barnsey,
Norths DN10 6DY
£9.95 (cash)
£10.95 (Inst)

Well-aid simulation covering wildlife and conservation in a unique way. The user is shown responsibility for protecting the progressively small jaguar population in the Scottish Highlands from egg thieves, poachers, tourists, bad farmers and more others. Thought provoking and stimulating. Developed in conjunction with the Royal Society for the Protection of Birds. Superb graphics and accompanying resource material.

PICTURE BUILDER
M B MacGibbon,
35 Northcote House,
82 Fleet Street,
London EC4,
£5.95

A marvelous graphics program which enables complex patterns and patterns to be created very easily. The program provides a drawing board and a print/palette with many selections and manipulation of simple shapes to create patterns. It's for younger users to develop their knowledge of shape and colour. The program is very highly recommended. The pack contains a good 20-page booklet too.

SCIENCE 1
Sunsoft,
5 Watsons Gardens,
Newbury,
Buckingham,
Reading RG6 2AR
£8.95

Four programs are contained in this pack. They are an adventure in which scientific knowledge has to be used to keep a bear alive, a database of the elements and their properties, a database on minerals with and without backbones, and a game featuring pollution.

STAR TREK II
Langsam Software,
Langsam Group Ltd.,
Langsam House,
Barnet Hill,
Barnet,
Essex CM8 2JF
(0278 28231)
£7.95

See his letters from the post to build up words, or make a word by adding from your opponent and adding letters from the consistently right making point.

STAR TREK II
Minnsoft,
Watsons Grove,
London EC2P 1DB,
(01-253 6348/253 3883)
£8.95 (price) £12.95 (link)

This program is Star Trekker and Star System - which plot the stars and planets seen in the night sky from any position north of any town on this and the next century. The program uses menu-driven displays to access information such as the position of the stars, relative positions of the planets, constellations of the earth etc. The displays can be printed using an Epson printer.

STOCK MARKET

It also provides lots of surprise endings. Suitable for six and seven year olds and above. Instructions included.

TALLY WIZARD
Bill MacKillion
St. Bartolomew House,
62 Fleet Street,
London EC4A
£8.95

A multi-playing game where the aim is to build a path from one side of the board on screen to the other, ahead of your opponent (another player or the computer) by answering various sums correctly. Quite a novel idea.

THE MAGIC SWORD
Gothams Publications Ltd.,
Europa House,
88 Chichester Road,
Haslemere,
Surrey,
Chichester
Chichester SO1 1NY
(01245 6383)
£8.95

An adventure for young children featuring a handsome prince, a beautiful princess, a castle with secret passages and dark dragons. A fun format, deep atmosphere which will help who lives in a very crowded house. Children travel through

the countryside to find the princess and rescue her from the clutches of the wicked witch. That is a double happy chance.

TIME TRACKER
AGK Software,
London House,
64 Upper Richmond Road,
London SW18 2PB
(01-876 8848)
£7.95

A great game for children of all ages which aims to aid the understanding of the relationship between the 12 hour analogue and 24 hour digital clock. The relationship between analogue and digital is reinforced while driving your train around evenly made and picking up problems from time to time on the way to take back to the depot within a time limit. Good use of several Program, incorporating many rich colour challenges with several levels of difficulty. Accompanying notes.

3D BINARY GAME
Langsam Software,
Langsam House,
Barnet Hill, Barnet
Essex CM8 2JF
£7.95

Space odyssey that practices maths skills. At the 1000 miles space ship speeds through pathways of a black hole, quick mental calculation is needed to generate a safe journey through the outer reaches of the universe. Practice the four rules for numbers between 0 and 99 with a variety of difficulty levels. Best instructions included.

TERRY HART'S ART MASTER
Camden Business
Watsons (UK) Ltd.,
1 Watsons Road,
Watkins Industrial Estate,
Clerf.,
Northants NN17 1LL,
(0538 296262)
£8.95

WOLF HARRY'S PICTURE BUILDER
Camden Business
Watkins (UK) Ltd.,
1 Watsons Road,
Watkins Industrial Estate,
Clerf.,
Northants NN17 1LL,
(0538 296262)
£11.95

A graphics package based on the leading block approach. A palette of 256 colours is available and there are two character sets of 256 characters on each. All the instructions for filling the screen with a design, changing background colour, saving pictures and clearing the screen are displayed. The program can be controlled with either a joystick or from the keyboard. Package includes two creative and full instructions.

This graphics package really makes use of the high resolution graphics capability of the Commodore 64. There is a choice of 24 colours and a help screen gives full details of possible commands. A second screen enables a picture to be displayed in the results of moving a line, changing colour etc. can be edited. Enclosed sheets can be filed in different ways if the screen can use different colours, automatic circle generation and repetition of shapes stored already in memory are all featured. Editing the keyboard or a joystick can be used. Two examples of disk art included in the pack as well as sample pictures and instructions.

WORD THAT WIZARD
Bill MacMillan
St. Bartholomew House
82 Fleet Street,
London EC4
£9.95

A game which aims to develop vocabulary and logical understanding. Players have to reveal a hidden message by entering 'letter buying' and penalties. A version of this program is to form part of a package solving units developed by the Micro-computer Education Programme. Suitable for 16 year olds onwards.

WORD WIZARD
Langman Software
Langman Group Ltd.,
Langman House,
Banc Mill,
Harlow,
Essex CM20 2JF
(0278 25721)
£7.95

(0885 65492)
For the expanded VIC-20
£9.95

Covered set of programs for practising up to double. Covers the four rules, four levels of understanding, six practice exercises and eleven problems.

FOR THE VIC

FLIGHT PACK
For the VIC-20 from CERN
Compendium Business
Mechanics (UK) Ltd
1 Marston Road,
Widnes Industrial Estate,
Cairn,
Northwich NW17 0EX
(0646 296262)
£11.95

Six programs which aim to introduce and reinforce early number concepts. The programs include Place Count where the number symbol has to be matched to the number of pebbles that appear on screen; Place Steps which processes

ordering; Place Add; Place Buzz matches a number symbol with a number of marbles; Place Woods involves facts number quantity is represented by a symbol; and Place Move is a game involving addition or subtraction. All the programs are a joystick and accompanying the three cassette is an instruction booklet.

LEISURE 830 FT

This is the section in which we've put all the software that doesn't fall neatly into any of the previous categories. Like packages that make music, help you to design your own games or even those that deal with such diverse subjects as astronomy and dating.

GAMES DESIGNER

Adventure Writer
Codewriter
£24.95

Repackaged disk version of a highly acclaimed program called 'The Quest' from Cabot. It's a free text adventure designer that will produce a stand-alone game of commercial quality - and with a free base already here produced. Codewriters' disk comes over with an advanced manual. See 'The Quest'.

Game Creator
Microsoft
£12.95

A utility program designed to let you produce word-type games, both those that shoot on up. Many options allow you to produce graphics, sound and graph to add the rules for action. A number of example programs are included. But the package will not let you produce a stand-alone game - the program must be present.

The Owl Game
28 Hawthorne Road
Bury
South Gloucesters
£24.95

Although CodeWriter has the marketing rights for the disk version of the program, Cabot will still make the most changes to its version.

Page 64
CodeWriter
£11.95 (tape)
£19.95 (disk)

Another repackaged though identical version of the original Source from BP Marketing. Source is really a language (generally considered specially designed for producing games). This version requires some knowledge of most of the basic Source commands. It suggests 42 commands, has a comprehensive 60 page instruction manual with demonstrations. There's also a Source 'Tree' Club and bulletin board.

The Jello Plot
MicroPlot
£9.95 (tape)
£12.95 (disk)

This program itself comes with the book by Professor Justin Jello, professor of psychology at the University of Vermont. The program screens your present height, weight and age and recommends a diet and activity regime personal to you. Loss time diet approach based on a credit and rewards system.

Star Trekker and Delta System
Microsoft
£19.95 (tape)
£12.95 (disk)

Star Trekker plots the next time-warp start over in the right way from any position so with at any time in this and the next century. Delta System does the same thing for the planets. Lightmap enables you to obtain information on individual stars, draw constellations, simulate the rotation of the Earth throughout the night and output the display on a laser printer. Similar software are available for the planet program.

FOR THE VIC

The Games Designer
Mastertron
£19.95

Repurpose of a long available program for the unpowered Vic now with revised and more comprehensive manual. The program lets you design graphics, screen layouts, theme tunes sound effects, playing formulations and other facilities for an arcade-type game. The package also includes four games (Kings, Spies, Krazy Man) which you can customize. There's also a program to let you save your effects on to tape.

MUSIC

Composer 64
Nikon Computing
22 Guildford Road
Farnham Surrey
GU10 3JH
£19.95 (tape)
£16.95 (disk)

Composer/sequencer package that lets you compose on to a store. Features preset instruments, 16-volume range, three signatures, rhythms and full MIDI control. Load and save facility to tape or disk. Note range extends from three notes below to ten above.

Multitrack Synthesizer
Ranch Software
£14.95

Music control screen shows rows of parallel slider controls, which toggle between a special effects panel. Also background generator to store repetitive patterns and two playback modes. Allows saving of tunes and sampling with tunes still in memory. Easy package to use with good comprehensive manual.

Music Composer
Comedian
£19.95

Main feature of this package is that music actually scrolls across the screen like notes appearing as you hear them. Has a number of preset instruments and options to play on the old keyboard. But has a slightly cumbersome method of composition - a rather simple package.

Music System
Ideology
24 Peter a Square
London W8
£24.95

Comprehensive package for composing, playing and printing your compositions and musical notation. The 'MIDI' mode lets you compose directly on to a musical store. Full MIDI adjustment is possible as well as key transposition. This program is a companion from the BBC micro and should be available on the 64 by February.

Musician
Manzoni UK
The Metropolitan
Guildford Road
London W1
approx £140 complete

Most sophisticated and comprehensive music package yet produced for the 64. It comes in three modules: Synthesizer/Sequencer £84.95, Sequen-

writer £24.95 and Keyboard Mixer £4.95. These bundles in disks are also available for Atari Intuition, classic-joy and drum options. Quarterly version of Musician 1 should be available soon.

Synth 64
Adamsart
18 Warwick Avenue
Northolt, London
£19.95 (tape)
£12.95 (disk)

Allows you to compose and edit as you would write down in three voices. 'Tuner' facility lets you set changes in pitch and waveform. But the major feature is probably sequencer. Also load and save facility and ability to list in printer. Although composing is slow and tedious, dedicated effort can produce excellent results.

Ultimate 64
Easymusic
£14.95

Music-driven software for load save play and record. Gives edition of six preset arrangements and displays on-screen MIDI values for each voice. Good manual which includes routines allowing you to integrate music into theme programs. But generally not a very user-friendly package.

the 1990s, the number of people who have been employed in the public sector has increased in all countries. The increase has been particularly rapid in the United Kingdom, where the public sector has grown from 12.5% of the economy in 1980 to 20.5% in 1995 (OECD 1996).

There are a number of reasons for the increase in public sector employment. One reason is the growth of the welfare state. In many countries, the welfare state has expanded significantly since the 1960s, and this has led to an increase in public sector employment. Another reason is the growth of the public sector in the services sector. In many countries, the public sector has grown rapidly in the services sector, particularly in the areas of health care and education.
